JESG Overlay Criteria

The J.P. Morgan Global Credit Index (GCI) ESG Investment Grade GBP Short-term Custom Maturity Index applies the J.P. Morgan JESG methodology as an overlay to the baseline Global Credit (GCI) Investment Grade Short-term Custom Maturity Index.

For details on the ESG providers, scoring methodology, green bond treatment and exclusions, please refer to the corporate methodology detailed within the [J.P. Morgan ESG Index Suite \(JESG\) Rules and Methodology](#).

ESG providers & Green Bond certification authorities:	Sustainalytics RepRisk Climate Bonds Initiative
JESG Scoring methodology:	JESG issuer scores are a 0-100 percentile rank calculated based on normalized raw ESG scores from third-party research providers Sustainalytics and RepRisk. An issuer's finalized JESG score incorporates a 3-month rolling average.
JESG Integration methodology:	The JESG scores are divided into five bands that are used to scale each issue's baseline index market value, with the band rebalance occurring with a one-month lag.
Green bond treatment:	If an instrument is categorized as a "green bond" by the Climate Bonds Initiative, the security will receive a one-band upgrade. Green bonds by issuers already in Band 1 will not receive any further upgrades.
JESG Ethical exclusions & Negative Screening:	<p>Issuers are excluded based on the below criteria:</p> <ul style="list-style-type: none"> • Issuers with JESG scores less than 20 • Issuers not in compliance with UN Global Compact principles as identified by both RepRisk and Sustainalytics • Issuers with revenue from the following harmful activities[^]: <ul style="list-style-type: none"> ○ Oil sands (any extraction involvement) * ○ Thermal Coal (any extraction or power generation involvement) * ○ Tobacco (any production involvement) ○ Controversial weapons (any involvement) ○ Small Arms (revenues over 10% from retail distribution activities, over 10% from military/law enforcement customers, or any involvement in assault and non-assault weapons or key components) ○ Military contracting (revenues over 10% from weapons and non-weapon-related products and services activities) <p>An issuer that is excluded from the JESG indices will not be eligible to re-enter the benchmark for at least 12 months after the time of its initial exclusion.</p> <p>[^]Please note that the exclusions applied are a custom version of those captured in the JESG rules and methodology.</p> <p>*Green bonds from issuers involved in thermal coal or oil sands remain eligible for JESG inclusion to incentivize transition to less pollutive revenue streams.</p>

Defining the Index Universe

Eligibility for the index will be determined on a continuous basis by monitoring the index criteria. Any changes to the composition or eligibility will be announced prior to rebalance with an estimated schedule to provide full transparency to the investor base.

Countries of risk for the instruments in the index will be determined based upon the below considerations:

1. The country with the largest source of revenue. Guarantees by other entities including subsidiaries or holding companies in other countries will also be considered.
2. The headquarters or the location of the issuer's majority assets will also be considered.

New Issue Timing

A new issue that meets the index criteria is added at the month-end rebalancing provided its first settlement date falls five business days before the rebalancing date. If its settlement date falls on or after five business days prior to the month-end rebalancing date, it is not eligible for inclusion until the following month-end rebalancing.

Instruments issued purely in reliance on Regulation S or "Reg-S" (without an accompanying 144A or registered tranche) or private placements (not registered instruments) are eligible for inclusion after a 40 calendar day seasoning period provided they meet other index criteria. The date at which the seasoning restriction is lifted will effectively be the new "settlement" date.

Fallen angels

Bonds that have been downgraded from investment grade to high yield while included in the index will be eligible for an additional 6-month provided their credit ratings are no worse than B-/B3 according to the J.P. Morgan index methodology. Securities that have been downgraded to a credit rating below B-/B3 will be removed at the next month-end rebalancing.

Appendix

The following is a description of our methodology for calculating aggregate returns at the index level. The returns calculated are total return, price (clean) return, interest (coupon) return, treasury return, spread (excess) return, and spot return.

Total return is a means of representing the economic benefit of holding a security or portfolio position. In its simplest form, it is based on the “cash in/cash out” notion – i.e., what is paid for the security at the initial purchase versus what is received at its sale. The means of calculating the total return on a basket containing various instruments is an extension of the single-instrument total return framework.

Index Total Return

The total return is a representative measure of the performance of the underlying instruments between day $t - 1$ and day t . At its most basic, the index total return of a multi-currency portfolio can be explained by five components: price return, interest return, treasury return, spread return, and spot return.

Assume that the portfolio of securities is composed of bonds and markets in proportion to their respective total market value. Market value in this case is calculated using the amount outstanding, as well as the total price inclusive of accrued interest and principal payments. The rate of return for any day can be attributed in one of two ways:

1. Using the clean and coupon returns:

$$\text{Total Rate of Return} = (1 + \text{Price Rtn})(1 + \text{Interest Rtn})(1 + \text{Spot Rtn}) - 1$$

2. Or, alternatively, using the treasury and excess returns:

$$\text{Total Rate of Return} = (1 + \text{Treasury Rtn})(1 + \text{Spread Rtn})(1 + \text{Spot Rtn}) - 1$$
