SECTION I—INTRODUCTION
Where JPMorgan Chase Bank, N.A. (the “Bank” or the “Advisor”) acts as your investment manager, we may only invest in products that we believe are suitable for you. A key element of our duty to ensure suitability is that we are satisfied that you understand the principal risks associated with each product that we invest in on your behalf.

The financial markets present many different risks of which investors should be aware prior to investing. The purpose of this Risk Disclosure Booklet is to provide you with a description of certain generic risks that may be common to all investments and to describe in more detail the nature and risks of the principal types of investments that we offer. Our objective is to explain the risks in sufficient detail to enable you to instruct us to make investment decisions on your behalf, on an informed basis.

As a discretionary investment management client, we will not provide you with any additional documentation prior to our making an investment on your behalf. In order to fulfill your asset allocation, you will have authorized us to invest in a number of the products that are mentioned in this Risk Disclosure Booklet. The product descriptions and the risks disclosed in this Risk Disclosure Booklet are, however, illustrative and cannot be exhaustive. For example, the Risk Disclosure Booklet does not deal with risks associated with a particular issuer or counterparty, general economic risks (notably those associated with a particular market, interest rate fluctuations, etc.) or tax risks which may be specific to individual investors. We have attempted to explain the key characteristics of the main asset classes and to describe certain recognized risks of investing in such asset classes.

Section 2 of this Risk Disclosure Booklet contains important information about your investments and describes potential conflicts of interest. Section 3 describes in more detail certain specific products and key risks of certain types of investments. Section 4 discusses additional general risks and contains important information about trading.

This Risk Disclosure Booklet is also available electronically on https://www.jpmorgan.com/PB-Risk-Disclosure. From time to time we will update the Risk Disclosure Booklet and we will notify you of any such updates.

This Risk Disclosure Booklet forms part of the Investment Management Account Agreement (the “Agreement”). Capitalized terms not otherwise defined herein have the meanings given to them in the Agreement. Please contact your J.P. Morgan team if you would like further information or explanation regarding any of the investments or risks referred to in this Risk Disclosure Booklet.

SECTION II—CONFLICTS OF INTEREST
IMPORTANT INFORMATION ABOUT YOUR INVESTMENTS AND POTENTIAL CONFLICTS OF INTEREST
As further described below and in the Discretionary Portfolio Mandate or other Agreement for your account, conflicts of interest will arise whenever the Advisor has an actual or perceived economic or other incentive in its management of the Client’s Portfolio to act in a way that benefits the Advisor or its affiliates (together, “JPMC” or “J.P. Morgan”). Conflicts will result, for example, (i) when the Advisor invests in an investment product, such as a mutual fund, structured product, separately managed account or hedge fund issued or managed by the Advisor or an affiliate of the Advisor, such as J.P. Morgan Investment Management Inc.; (2) when the Advisor obtains services, including trade execution and trade clearing, from an affiliate of the Advisor; (3) when the Advisor receives payment as a result of purchasing an investment product for your account; or (4) when the Advisor or its affiliates receive payment for providing services (including shareholder servicing, recordkeeping or custody) with respect to investment products purchased for the Client’s Portfolio.

Other conflicts will result because of relationships that the Advisor or its affiliates have with other clients or when the Advisor or its affiliates act for their own account.

Investment strategies are selected from both JPMC and third party asset managers and are subject to a review process by our manager research teams. From this pool of strategies, our portfolio construction teams select those strategies we believe fit our asset allocation goals and forward looking views in order to meet the Portfolio’s investment objective.

As a general matter, we prefer JPMC Managed Strategies and Products. We expect the proportion of JPMC Managed Strategies and Products will be high (in fact, up to 100 percent) in strategies such as, for example, cash and high-quality fixed income, subject to applicable law and any account-specific considerations. JPMC Managed Strategies and Products are: (i) mutual funds (other than money market funds), exchange traded funds, other registered funds, and hedge funds managed by JPMC or structured products issued by JPMC; (ii) Six Circles Funds, which are mutual funds managed by JPMC and sub-advised by third parties, and for which JPMC does not retain a fee for fund management or other services; and (iii) fixed income, equity and alternative separately managed accounts managed by JPMC, in which JPMC is appointed investment advisor.

While our internally managed strategies generally align well with our forward looking views, and we are familiar with the investment processes as well as the risk and compliance philosophy of the firm, it is important to note that JPMC receives more overall fees when internally managed strategies are included, except as noted below and in the Discretionary Portfolio Mandate or other Agreement. We offer the option of choosing to exclude JPMC Managed Strategies and Products (other than cash and liquidity products) in certain portfolios.

The Six Circles Funds are mutual funds advised by JPMC and sub-advised by third parties. Although considered internally managed strategies, JPMC does not retain a fee for fund management or other fund services.

The same or similar investment strategies may be offered by JPMC, or may be managed by the same sub-advisor in different affiliate sales channels, and at different fee levels. Additionally, comparable services may be available at lower costs through other firms.

Float
The Advisor or its affiliates may retain, as compensation for the performance of services, the account’s proportionate share of any interest earned on aggregate cash balances held by JPMC with respect to “assets awaiting investment or other processing.” These “assets awaiting investment or other processing” are invested by JPMC in a number of short-term investment products and strategies, including, without limitation, loans to customers and investment securities, though the amount of earnings retained by JPMC on such assets—known as “float”—due to their short-term nature, is generally considered to be at the prevailing Federal Funds interest rate (a publicly available average rate of all Federal Funds transactions entered into by traders in the Federal Funds market on a given date), less FDIC insurance and other associated costs, if any. “Assets awaiting investment or other processing” for these purposes include, to the degree applicable, new deposits to the account, including interest and dividends, and any uninvested assets held in the account caused by an instruction to purchase and sell securities. JPMC will generally earn float until such time as such funds may be automatically swept into a sweep vehicle, as described further in the General Terms for Accounts and Services and Appendices, or otherwise reinvested. “Assets awaiting investment or other processing” may also arise when the Advisor facilitates a distribution from the account. Thus, pursuant to the Advisor’s standard processes for check disbursement, cash is generally debited from the account on the date on the face of the check (also called the payable date). Such cash is deposited in a noninterest-bearing omnibus deposit account at the Advisor, where it remains until the earlier of the date the check is presented for payment, or the date the payment on the check is stopped at the client’s instruction (in which case the underlying funds are returned to the account). The Advisor derives earnings (float) from use of funds that may be held in this manner, as described above.

Conflict When Advisor is Also a Lender
The Advisor may extend credit to you upon terms mutually agreed upon. The credit agreement governing the lending arrangement will set forth certain remedies that the Advisor can take upon an event of default. In exercising such remedies or in following the instructions of an affiliate, the Advisor will not be required to marshal assets or act in accordance with any fiduciary duty that Advisor may have to you as your investment manager. You understand that any liquidation, sale or transfer of any portion of your investments pledged as collateral to the Advisor as lender may cause the applicable account to no longer conform to the investment guidelines or no longer to be diversified adequately, and that any remaining investment may have limited or no liquidity. The Advisor will not be deemed in breach of the investment guidelines if there is a deviation from such guidelines as a result of Advisor exercising its remedies as described above.

IMPORTANT INFORMATION ABOUT CONFLICTS RELATING TO JPMC SERVICE PROVIDERS
JPMC provides financing, consulting, investment banking, management, custodial, prime brokerage, transfer agency, shareholder servicing, treasury oversight, administration, distribution or other services (“Services”) to its clients, including investment funds, products or companies in which the Advisor invests on behalf of, or with which the Advisor recommends for investment to, its clients. These relationships generate revenue to JPMC and have the potential to influence the Advisor in deciding whether to select such investment funds, products or companies for investment by its clients or to recommend such funds, products or companies to its clients. When deciding how to manage accounts, the Advisor in deciding whether to select such investment funds, products or companies for investment. For example, JPMC earns compensation from private investment funds or their sponsors for providing certain Services, and the Advisor would otherwise have an incentive to favor such funds over other funds with which JPMC has no relationship when investing on behalf of, or recommending investments to,
its clients because such investments potentially increase JPMC’s overall revenue. In addition, JPMC derives ancillary benefits from providing such services. Therefore, it is important for clients to know that JPMC has policies which seek to ensure the receipt of such compensation as described above does not affect the Advisor’s decisions and recommendations to clients. For example, J.P. Morgan Wealth Management (“WM”) maintains various types of internal information barriers and other policies that are designed to prevent certain information from being shared or transmitted to other business units within WM and within JPMC more broadly. The Advisor relies on these information barriers to protect the integrity of its investment process and to comply with fiduciary duties and regulatory obligations.

SECTION III—KEY CONSIDERATIONS AND RISKS OF CERTAIN TYPES OF INVESTMENTS

The following discussion is focused on key considerations and risks of certain types of investments. Your account may include some or all of the following investments depending on your suitability profile and the type of account that you own (i.e. retirement account). If you would like additional information on any of the investments below, please reach out to your J.P. Morgan team.

IMPORTANT INFORMATION ABOUT SEPARATELY MANAGED ACCOUNTS

Portfolios invested in individual equity or fixed income securities may be managed by the Advisor or by a third party manager, including an affiliate of the Advisor. When the Advisor or an affiliate of the Advisor manages these investments, there is a benefit to JPMC since it increases the overall revenue of JPMC. If the Client’s account in which the investment is made is an individual retirement account or other account governed by Section 4975 of the Internal Revenue Code of 1986, as amended (each, an “IRA”) or the Client’s account is governed by the Employee Retirement Income Security Act of 1974, as amended (“ERISA”), the account will not be charged an additional fee. For accounts which are not IRAs or governed by ERISA, a manager of a Separately Managed Account (“SMA”) may invest in products that result in additional revenue to JPMC.

JPMorgan Chase & Co. stock held in index-tracking SMA strategies

Certain index-tracking SMA strategies managed by Advisor or an affiliate are designed to approximate the characteristics of an index (such as the S&P 500 Index) and such strategies can invest in JPMorgan Chase & Co. publicly traded securities (“J.P. Morgan stock”). The management fee for such strategies will apply to all holdings in the strategy, including J.P. Morgan stock. As such, the Advisor or an affiliate will earn a management fee on J.P. Morgan stock when managing certain index-tracking SMA strategies, subject to applicable law as described above.

IMPORTANT INFORMATION ABOUT REGIONAL-FOCUSED PORTFOLIOS

Portfolios focusing on investments in certain regions (including those focused on the United States) are likely to hold more investments from that region than portfolios with greater regional diversification. The economic, business, political, regulatory, social and environmental conditions in that region are likely to affect regionally-focused portfolios, and the portfolios’ performance, more than they affect portfolios with greater regional diversification.

IMPORTANT INFORMATION ABOUT MUTUAL FUNDS AND EXCHANGE-TRADED FUNDS (“ETFs”) REGISTERED UNDER THE INVESTMENT COMPANY ACT OF 1940, AS AMENDED (“REGISTERED FUNDS”) AND UNDERTAKINGS FOR COLLECTIVE INVESTMENT IN TRANSFERABLE SECURITIES (“UCITS FUNDS”)

(i) JPMC Funds—Management Fees

JPMC may be the sponsor or manager of Registered Funds, including ETFs, and UCITS Funds (together, “JPMC Funds”) that are purchased for the Client’s Portfolio. In such case, JPMC in most cases will receive a fee for managing the JPMC Fund or for providing other services to the JPMC Funds based on the value of the assets invested in the JPMC Funds. As such, JPMC will receive more total revenue when the Client’s Portfolio is invested in JPMC Funds than when it is invested in third party funds. JPMC will not retain such additional revenue when the Client’s account is an IRA or is governed by ERISA and the account is invested in JPMC Funds; instead, the account advisory fees will generally be offset by an amount equal to the account’s pro rata share of all such fees paid to JPMC.

(ii) JPMC Funds and Third Party Funds—Other Fees and Expenses

All Registered Funds and UCITS Funds (together, “Regulated Funds”) have various internal fees and other expenses, that are paid by managers or issuers of the Regulated Funds, or by the Regulated Fund itself, but that ultimately are borne by the investor. JPMC may receive administrative and servicing and other fees for providing services to both JPMC Funds and third party Regulated Funds that are held in the Client’s Portfolio (except for when the fund is held in a Client’s account which is an IRA or is governed by ERISA). These payments may be made by sponsors of Regulated Funds (including affiliates of the Advisor), or by the Regulated Funds themselves and may be based on the value of the Regulated Funds in the Client’s Portfolio. Regulated Funds (or their sponsors) may have other business relationships with JPMC outside of its portfolio management role or with JPMC broker-dealer affiliates, which may provide brokerage or other services that pay commissions, fees and other compensation.

(iii) Six Circles Funds

The Six Circles Funds are Registered Funds specifically designed by JPMC for use in discretionary accounts as completion funds to align with JPMC’s core portfolio views. JPMC have an incentive to allocate assets to JPMC Funds through an agreement to waive any investment advisory fees that exceed the fees owed to the Six Circles Funds’ third-party sub-advisors. The Six Circles Funds do not pay fees to JPMC for any other services to the Six Circles Funds. Services are provided by third-party service providers and are generally paid by the Six Circles Funds or JPMC. Six Circles Funds may include in calculating the advisory fees paid on the overall Portfolio.

Six Circles Funds shares may only be purchased through client accounts for which JPMC has investment discretion. Should the Client choose to close its discretionary account but retain the interest in the Six Circles Fund or Funds, Six Circles Fund shares must be held through an eligible brokerage account and no new purchases into the Six Circles Funds will be permitted (other than dividend reinvestment). Note that since the Six Circles Funds are completion portfolios designed to complement and work as part of the overall discretionary portfolio and are not intended to be standalone investments, each Six Circles Fund may underperform as a standalone investment, even in instances where the overall portfolio performs as intended. Further, a Six Circles Fund’s overall performance and liquidity may be negatively affected, and additional transaction costs may be incurred by the Six Circles Funds, as a result of (i) allocation decisions made by JPMC to shift discretionary client assets among the Six Circles Funds and other investments and (ii) allocation decisions made by JPMC to shift Six Circles Fund assets among different investment strategies and sub-advisors, which may negatively affect the value of Six Circles Fund shares even if they are no longer held through a JPMC portfolio.

Conflicts Related to New JPMC Funds

JPMC has an incentive to allocate assets to new JPMC Funds to help JPMC develop new investment strategies and products. JPMC has an incentive to allocate assets of the Portfolio to a JPMC Fund that is small or to which JPMC has provided seed capital. In addition, JPMC has an incentive not to sell or withdraw portfolio assets from a JPMC Fund in order to avoid or delay the sale or withdrawal’s adverse impact on the fund. Accounts managed by JPMC have significant ownership in certain JPMC Funds. JPMC faces conflicts of interest when considering the effect of sales or redemptions on such funds and on other fund shareholders in deciding whether and when to redeem its shares. A large sale or redemption of shares by JPMC acting on behalf of its clients could result in the underlying JPMC Fund selling securities when it otherwise would not have done so, potentially increasing transaction costs and adversely affecting fund performance. A large sale or redemption could also significantly reduce the assets of the fund, causing decreased liquidity and, depending on any applicable expense caps, a higher expense ratio, or liquidation of the fund. JPMC has policies and controls in place to govern and monitor its activities and processes for identifying and managing conflicts of interest.

IMPORTANT INFORMATION ABOUT EXCHANGE-TRADED FUNDS AND INDEX MUTUAL FUNDS

ETFs and index mutual funds are marketable securities that are interests in registered funds, and are designed to track, before fees and expenses, the performance of returns of a relevant basket of assets, usually an underlying index. The index may be published or calculated by affiliates of the Advisor. Unlike mutual funds, an ETF trades like a common stock on a stock exchange. ETFs experience price changes throughout the day as they are bought and sold. ETFs typically have higher daily liquidity and lower fees than mutual fund shares.

Physical replication and synthetic replication are two of the most common structures used in the construction of ETFs and index mutual funds. Physically replicated ETFs and index mutual funds buy all or a representative portion of the underlying securities in the index that they track. In contrast, some ETFs and index mutual funds do not purchase the underlying assets but gain exposure to them by use of swaps or other derivative instruments.

In addition to the general risks of investing in funds, there are specific risks to consider with respect to an investment in these passive investment vehicles. ETF and index mutual fund performance may differ from the performance of the applicable index for a variety of reasons. For example, ETFs and index mutual funds incur operating expenses and portfolio transaction costs not incurred by the benchmark.
index, may not be fully invested in the securities of their indices at all times, or may hold securities not included in their indices. In addition, corporate actions with respect to the equity securities underlying ETFs and mutual funds (such as mergers and spin-offs) may impact the variance between the performances of the funds and applicable indices. Passive investing differs from active investing in that ETF and index mutual fund managers are not seeking to perform their benchmark. As a result, managers may hold securities that are components of their underlying index, regardless of the current or projected performance of the specific security or market sector. Passive managers do not attempt to take defensive positions based upon market conditions, including declining markets. This approach could cause a passive vehicle's performance to be lower than if it employed an active strategy.

ETF shares are bought and sold in the secondary market at market prices. Although ETFs are required to calculate their net asset values (NAV) on a daily basis, at times the market price of an ETF's shares may be more than the NAV (trading at a premium) or less than the NAV (trading at a discount). Given the differing nature of the relevant secondary markets for ETFs, certain ETFs may trade at a larger premium or discount to the relevant shares of other market places where such ETFs are traded. The risk of deviation from NAV for ETFs generally is heightened in times of market volatility or periods of steep market declines. For example, during periods of market volatility, securities underlying ETFs may be unavailable in the secondary market, market participants may be unable to calculate accurately the NAV per share of such ETFs, and the liquidity of such ETFs may be adversely affected. This kind of market volatility may also disrupt the ability of market participants to create and redeem shares in ETFs. Further, market volatility may adversely affect, sometimes materially, the prices at which market participants are willing to buy and sell shares of ETFs. As a result, under these circumstances, the market value of shares of an ETF may vary substantially from the NAV per share of such ETF, and the Client may incur significant losses from the sale of ETF Shares.

Certain funds track financial indexes in which the Advisor or an affiliate retains various intellectual property rights. As a result, JPMC may be entitled to receive index licensing fees from unaffiliated licensees of these indexes. Affiliates of the Advisor may develop or own and operate stock market and other indexes based on investment and trading strategies developed by such affiliates. Affiliates of the Advisor may also assist unaffiliated entities in creating indexes that are tracked by certain ETFs and index mutual funds utilized by the Advisor. Some ETFs and index mutual funds seek to track the performance of these indexes. JPMC may, from time to time, manage client accounts that track in the ETFs and index mutual funds. In addition, JPMC may manage strategies which track the same indexes used by the ETFs and index mutual funds or which may be based on the same, or substantially similar, strategies that are used in the operation of the indexes and the ETFs and index mutual funds. The operation of the indexes, the ETFs and index mutual funds and client accounts in this manner may give rise to potential conflicts of interest. For example, client accounts that track the same indexes used by the ETFs and index mutual funds may engage in purchases and sales of securities relating to index changes prior to or contemporaneously with the announcement of the index changes on terms at which the ETFs and index mutual funds engage in similar transactions because the client accounts may be managed and rebalanced on an ongoing basis, whereas the ETFs' and index mutual funds' portfolios are only rebalanced on a periodic basis corresponding with the rebalancing of an index. These differences may result in the client accounts having more favorable performance relative to that of the index and the ETFs and index mutual funds or other client accounts that track the index. Other potential conflicts include the potential for unauthorized access to index information, allowing index changes that benefit the Advisor or other client accounts and not the investors in the ETFs and index mutual funds. JPMC has established certain information barriers and other policies to address the sharing of information between different businesses within JPMC, including with respect to personnel responsible for maintaining the indexes and those involved in decision-making for the ETFs and index mutual funds.

For additional important information about conflicts of interest related to ETFs and index mutual funds that are JPMC Funds, please see IMPORTANT INFORMATION ABOUT MUTUAL FUNDS AND EXCHANGE-TRADED FUNDS (“ETFs”): REGISTERED UNDERTAKINGS FOR COLLECTIVE INVESTMENT IN TRANSFERABLE SECURITIES (“UCITS FUNDS”) above.

EXCHANGE-TRADED NOTES
An exchange-traded note (“ETN”) is designed to deliver the total return on a broad security or commodity index or individual security or commodity. ETNs pose risks that are very different from risks associated with ETFs or mutual funds that might invest in the same index or commodity. An ETF or mutual fund holding is a share in a portfolio of assets that is held separately from the assets of the portfolio’s manager. ETNs are unsecured notes or notes of the issuer, which is obligated to deliver the return of the index or commodity tracked by the ETN and to pay the holder at the terms of the specific ETN. ETN investors have no ownership interest in the underlying index or commodity and are wholly dependent on the issuer’s ability to pay. If the issuer becomes insolvent, ETN holders may lose their entire investment.

Acceptance of Prospectus and Issuer-Related Materials. The Advisor is authorized to accept delivery of prospectuses and other issuer-related materials and reports on the Client’s behalf. There are certain specific risk factors and potential conflicts of interest set forth in those documents, as well as rights, responsibilities and liabilities with respect to particular investments. The Advisor may rely upon the prospectuses, reports, offering documents, and third party marketing materials when making an investment on behalf of the Client and the Advisor is not responsible for the completeness or accuracy of any such third party materials. The Advisor is not required to deliver any prospectus, report or offering document directly to the Client, but such information is available upon request.

MUTUAL FUND LIQUIDITY RISKS
A mutual fund may make investments that are illiquid or that may become less liquid in response to market developments or adverse investor perceptions. Illiquid investments may be more difficult to value. The liquidity of portfolio securities can deteriorate rapidly due to credit events affecting issuers or guarantors, such as a credit rating downgrade, or due to general market conditions or a lack of willing buyers. An inability to sell one or more portfolio positions, or selling such positions at an unfavorable time and/or under unfavorable conditions, can increase the volatility of a mutual fund’s net asset value (“NAV”) per share. Liquidity risk may also refer to the risk that the mutual fund will not be able to pay redemption proceeds within the allowable time period because of unusual market conditions, an unusually high volume of redemption requests, or other reasons. Liquidity risk may be the result of, among other things, the reduced number and capacity of traditional market participants to make a market in fixed income securities or the lack of an active market. The potential for liquidity risk may be magnified by a rising interest rate environment or other circumstances where investor redemptions from money market and other fixed income mutual funds may be higher than normal, potentially causing increased supply in the market due to selling activity.

Clients should be aware that mutual funds are not intended to function as cash accounts and should be viewed as long-to-medium term investments. Fund companies customarily have policies against short-term trading, which they may enforce by imposing early redemption fees or withdrawals made within a specified period following investment or by barring the purchase of new shares for a period of time. If the Advisor is required to liquidate securities in order to satisfy a withdrawal request prior to the expiration of any minimum holding period imposed by a fund company, the Client may be required to pay any redemption fee imposed by the fund company (unless such fee has been waived) and additionally may be restricted from further investments in such fund company. The Client’s ability to invest additional funds in a mutual fund also may be affected.

RISKS OF INVESTING IN MONEY MARKET FUNDS
Stable NAV Funds
It is possible to lose money by investing in a Stable NAV money market fund (“Fund”). Although the Fund seeks to preserve the value of your investment at $1.00 per share, it cannot guarantee it will do so. The Fund may impose a fee upon sale of your shares or may temporarily suspend your ability to sell shares if the Fund’s liquidity falls below required minimums because of market conditions or other factors. An investment in the Fund is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. The Fund’s sponsor has no legal obligation to provide financial support to the Fund, and you should not expect that the sponsor will provide financial support to the Fund at any time.

Floating NAV Funds
It is possible to lose money by investing in a Floating NAV money market fund (“Fund”). Because the share price of the Fund will fluctuate, when you sell your shares they may be worth more or less than what you originally paid for them. The Fund may impose a fee upon sale of your shares or may temporarily suspend your ability to sell shares if the Fund’s liquidity falls below required minimums because of market conditions or other factors. An investment in the Fund is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. The Fund’s sponsor has no legal obligation to provide financial support to the Fund, and you should not expect that the sponsor will provide financial support to the Fund at any time. Past performance is no guaranty of future results.

UCITS Money Market Funds
It is possible to lose money by investing in a UCITS money market fund (“Fund”). These Funds may be structured as (i) Public Debt Constant NAV Funds that must invest most of their assets into government debt instruments and reverse repos collateralized with government debt or cash and maintain a constant NAV of approximately €1,00 per share; (ii) Low Volatility NAV Funds that maintain a constant NAV provided that certain criteria are met; and (iii) Variable NAV Funds which price their assets using market pricing and therefore offer a fluctuating NAV. Under certain conditions there may be restrictions on redemption and on transfer of shares. Large redemptions within a limited period of time could cause the Fund to liquidate share positions rapidly with an adverse impact on shares being redeemed and those outstanding. In some circumstances, a Fund may withhold for long periods all or part of the redemption proceeds payable to an investor.
ESG INVESTING RISK

ESG investing is an investment strategy in which environmental, social and governance factors are integrated into the due diligence and financial analysis of investment managers. ESG refers to the following:

- Environmental: Environmental factors (carbon footprint, renewable energy) involve evaluating the way a company uses its resources and sets policies to limit its environmental impact and protect the environment;
- Social: Social factors (privacy and data concerns, investments in the community) focus on the way in which a company seeks to create value through its relationships with employees, suppliers, its customers and the communities in which it does business;
- Governance: Governance factors (board diversity, business ethics) involve the accountability of a company’s management to its shareholders, a company’s practices regarding business ethics, as well as a company’s responsibility to society.

ESG investing may include additional risks. For example, ESG or sustainable investing strategies, including ESG SMAs, mutual funds and ETFs (“ESG Strategies”) may limit the types and number of investment opportunities and, as a result, could underperform other strategies that do not have an ESG or sustainable focus. ESG Strategies may invest in securities or industry sectors that underperform the market as a whole or underperform other strategies screened for ESG standards. ESG Strategies can be more concentrated in particular industries or sectors that share common characteristics and are often subject to similar business risks and regulatory burdens. Because investing on the basis of sustainability/ESG criteria can involve qualitative and subjective analysis, there can be no assurance that the methodologies utilized by, or determinations made by, the Advisor, or an investment manager selected by the Advisor, will align with the beliefs or values of the Client. Additionally, other investment managers, including our affiliate J.P. Morgan Investment Management Inc., can have a different approach to ESG investing and can offer ESG Strategies that differ from the ESG Strategies offered by the Advisor with respect to the same theme or topic.

ESG Strategies can follow different approaches to ESG investing. For example, some ESG Strategies select companies based on positive ESG characteristics while others may apply negative screens in order to exclude certain investments. Such investment strategies may also offer the ability to exclude particular sectors or industries from a portfolio. Restrictions and exclusions can affect the investment manager’s ability to make investments or take advantage of opportunities that may be available to clients that do not choose similar restrictions and, as a result, investment performance could suffer. Issuer screening aims to screen companies (issuers) with revenue derived from the restricted category selected by the Client, but it does not exclude all companies with any tie or revenue derived from such restricted category. Additionally, issuer screening is performed by a third party provider, such as MSCI or a third party investment manager, and J.P. Morgan does not independently verify or guarantee the accuracy of it. Accordingly, it is possible for the Client’s portfolio to hold investments in companies that derive some revenue from a restricted category. Any faith-based restrictions will exclude multiple industries from a portfolio. Restrictions and exclusions can affect the investment strategy of certain groups; however, such restrictions may not completely represent or norm the values and norms of such groups; hence, such restrictions may not completely represent or fully align with the Client’s values or religious beliefs.

ESG or sustainable investing is not a uniformly defined concept and scores or ratings may vary across data providers that use similar or different screens based on their process for identifying ESG issuers. The companies selected as demonstrating positive ESG characteristics may not be the same companies selected by other investment managers that use similar ESG screens or methodologies. In addition, companies selected might not exhibit positive or favorable ESG characteristics. ESG investing practices differ by asset class, country, region, and industry and are constantly evolving, and a company’s ESG practices and J.P. Morgan’s assessment of such practices can change over time.

J.P. Morgan takes a global approach to sustainable investing and the solutions offered through our sustainable investing platform are based on our internally defined criteria for a sustainable investment. The evolving nature of sustainable finance regulations and the development of jurisdiction-specific legislation setting out the regulatory criteria for a “sustainable” or “ESG” investment mean that there is likely to be, in the future, a degree of divergence as to the regulatory meaning of such terms. This is already the case in the European Union, for example, where under the Sustainable Finance Disclosure Regulation (EU) (2019/2088) (“SFDR”) certain criteria must be satisfied in order for a product to be classified as a sustainable investment.

IMPORTANT INFORMATION ABOUT INVESTMENTS IN EQUITY SECURITIES

An investment in equity securities involves a number of risks. The following risk factors discuss some of those risks, but the discussion below is not meant to be exhaustive and the risks discussed do not comprise a complete list of all the risks relating to equity securities.

The price of equity securities may rise or fall because of changes in the broad market or changes in a company’s financial condition, sometimes rapidly or unpredictably. These price movements may result from factors affecting individual companies, sectors or industries selected for a client’s portfolio or the securities market as a whole, such as changes in economic or political conditions. If a company becomes insolvent, its equity securities are repaid only after all other debts of the company have been repaid. This can result in a potential severe reduction in, or total loss of, their value. Investments in smaller, newer companies may be riskier than investments in larger, more-established companies. The securities of smaller companies may trade less frequently and in smaller volumes than securities of larger companies. In addition, smaller companies may be more vulnerable to economic, market and industry changes.

Investing in equity securities may also expose an investor to inflation and currency risk. Further, the investor will be exposed to the specific risks of the industry in which the company operates. For example, a computer chip manufacturer might have exposure to the availability and price of certain metals. Equity securities may not be registered, publicly listed or traded on an exchange, and these securities are more likely to be illiquid and therefore subject to a higher degree of liquidity risk than registered or listed securities.

IMPORTANT INFORMATION ABOUT PREFERRED SECURITIES INVESTMENTS

Preferred securities are equity securities issued by corporate or non-corporate (for example, trusts, including real estate investment trusts (“REITs”)) issuers with certain features that are characteristic of debt securities and certain features that are characteristic of common equity securities. For instance, like debt securities, preferred securities are typically issued with a fixed notional value (often referred to as the “liquidation preference amount”) and pay dividends or distributions periodically at a fixed or floating percentage of their notional value. Preferred securities also may (or may not) have credit ratings, but for reasons discussed below, the credit ratings of the preferred securities of an issuer are typically lower than those of its debt securities. Like common equity securities, preferred securities generally are perpetual and do not have a maturity date, and can remain outstanding unless redeemed or repurchased by the issuer. Furthermore, the dividends or distributions payable on a preferred security must be declared by the issuer’s board of directors before the payments can be made. As a consequence, if the board of directors of an issuer does not declare dividends or distributions for the relevant dividend or distribution period, the issuer will not be obligated to pay dividends or distributions on the relevant payment date, and such dividends or distributions in certain instances may be forfeited.

Holders of an issuer’s preferred securities typically do not have voting rights, unless the issuer is in default on its payments on the preferred securities, in which case holders of the preferred securities may be given certain voting rights until the time the issuer is no longer in such default.

Preferred securities occupy a place in an issuer’s priority of payments that is between debt securities and common equity securities. Holders of an issuer’s debt securities enjoy priority over holders of the issuer’s preferred securities to receive payments, and if an issuer is in default on its debt securities, it will not be permitted to make payments on its preferred securities. Because of their lower priority in receiving payments, preferred securities are typically rated lower than comparable debt securities of the same issuer and pay dividends or distributions at a higher rate than the coupon rates of the comparable debt securities.

Preferred securities are equity interests in an issuer and do not constitute indebtedness. This means that preferred securities of an issuer will rank junior to all existing and future indebtedness of the issuer and to other non-equity claims on the issuer with respect to assets available to satisfy claims on the issuer, including claims in liquidation. Moreover, some issuers may have existing indebtedness that restricts payment of dividends or distributions on their preferred securities in certain circumstances.

Preferred securities can be subject to transfer restrictions and, in limited situations, might not be listed on any securities exchange or have any established trading market. Therefore, investors in preferred securities might not be able to sell their preferred securities at their desired time or price, and should be willing to hold them as long term investments.
IMPORTANT INFORMATION ABOUT FIXED INCOME INVESTMENTS

Although fixed income investments are perceived to be conservative investments and more predictable than stocks, they are not without risk. Below are some of the major risks associated with the fixed income instruments that may be purchased in the Portfolio.

Credit risk is the risk that the issuer of a security, or the counterparty to a contract, may not honor its obligation to pay principal or interest, resulting in a loss to the investor. However, losses may occur in a fixed income portfolio invested in securities of good credit quality if the portfolio is actively traded. There may be no market for a fixed income instrument, and the holder may not be able to sell the security at the desired time or price. Even when a market exists, there may be a substantial difference between the secondary market bid and ask prices for a fixed income instrument. This risk is known as liquidity risk.

Credit spread risk is the risk that a change in credit spreads will adversely affect the value of an investment. Even when a market exists, there may be a substantial credit spread, which is the difference in yield between two fixed income instruments that have similar maturity but different credit quality. The value of fixed income instruments generally moves in the opposite direction of credit spreads. Values decrease when credit spreads widen and increase when credit spreads narrow. Changes in interest rates also affect the value of a fixed income instrument. This is known as interest rate (duration) risk. The value of fixed income securities generally moves in the opposite direction of interest rates. Values decrease when interest rates rise and increase when interest rates fall.

Declining interest rates may cause issuers to call their bonds in order to sell new bonds paying lower interest rates. The bond's principal is repaid early, but the investor is left unable to find a similar bond with as attractive a yield. This is known as call risk. Investors in callable bonds may not receive the bond's original coupon rate for the entire term of the bond, and they may be unable to find an equivalent investment paying rates as high as the original rate. This is known as reinvestment risk. In addition, once the call date has been reached, the stream of aCallable bond's interest payments is uncertain and any appreciation in the market value of the bond may not rise above the call price.

Callable bonds and asset-backed securities (a pool of fixed-income securities backed by a package of assets, including, but not limited to, mortgages, automobile loans and credit card receivables) are also subject to prepayment and extension risk. A decline in interest rates and other factors may result in unexpected prepayment of the underlying obligations, possibly causing a decline in the value of the investment and reinvestment at lower interest rates. An increase in interest rates and other factors may extend the life of such a security because the prepayments do not occur as expected, possibly causing a decline in the value of the investment. Since the Advisor’s fees apply to the total market value of the assets under management, a low interest rate environment the net investment return on fixed income investments could be negative.

Government Securities Risk: Although U.S. government securities issued directly by the U.S. government are guaranteed by the U.S. Treasury, other U.S. government securities issued by an agency of the U.S. government may not carry such a guaranty. The U.S. government may choose not to provide financial support to its agencies if not required to do so by law. Similar risks apply to securities issued by state government agencies and municipalities.

Many of the risks in fixed income securities apply to other investments as well. For instance, inflation risk (the risk that returns will not keep pace with inflation) affects every investment. Foreign investments also contain currency risk (the risk that currency exchange rate fluctuations may reduce gains or increase losses on foreign investments). Exchange rate volatility also may affect the ability of an issuer to repay debt denominated in a foreign currency, thereby increasing credit risk.

The Client acknowledges and agrees that the Portfolio may hold fixed income investments or vehicles that are, or that may become, subject to liquidity constraints for a variety of reasons, including lack of a trading market for an investment or restrictions or other limitations on resale, transfer, withdrawal or redemption of an investment.

Investing in fixed income mutual funds usually entails less risk and less reward than investing in equity mutual funds. As described above, investing in fixed income mutual funds involves four types of risk: interest rate risk, credit risk, prepayment risk, and inflation risk. Additionally, the fund could experience a loss and its liquidity may be negatively impacted when selling securities to meet redemption requests by shareholders. The risk of loss increases if the redemption requests are unusually large or frequent or occur in times of overall market turmoil or declining prices. Similarly, large purchases of fund shares may adversely affect the fund’s performance to the extent that the fund is delayed in investing new cash and is required to maintain a larger cash position than it ordinarily would.

IMPORTANT INFORMATION ABOUT COMMODITIES

Commodities include hard assets, such as agricultural products, metals, or petroleum as well as securities futures based on common stock, certain exchange-traded funds, American Depositary Receipts, and securities indices. Commodity futures contracts can be used for speculation, hedging, and risk management. If they are used for speculation, as would be the case in a Portfolio, the account could realize substantial profits in a short period of time, but it is also possible to incur substantial losses in a short period of time. Such losses may be larger than the initial commitment of capital because futures trading is highly leveraged.

Because of the leverage involved and the nature of futures contract transactions, losses may be felt immediately because gains and losses are credited or debited to the investor’s account, at a minimum, on a daily basis. The purchase or sale of a futures contract requires the Advisor to make an initial deposit of money, known as margin, which would be drawn from the Client’s account. Margin, in the context of futures trading, is different than the margin involved in the purchase of stocks. The purchase of stocks on margin involves a cash down payment and credit extended by the broker for the purchase. The margin required to buy or sell a futures contract is a deposit of money that can be drawn on to cover any daily losses. If movements in the markets for futures contracts or the underlying commodity decrease the value of the account's positions in futures contracts, additional funds from the Client’s account may be required as margin. If an account is under the minimum margin requirements set by the exchange or the account's broker, the position may be liquidated at a loss, and the Client’s account will likely bear any deficit resulting from the position. Minimum margin requirements for a particular futures contract at a particular time are set by the exchange on which the contract is traded and are subject to modification based on market conditions. An increase in market volatility and the range of daily price movements is frequently a reason for raising margins.

Futures contracts cannot be sold like stocks or bonds. They generally must be liquidated by the investor entering into an equivalent but opposite position in another contract month, on another market, or in the underlying commodity. If a position in a futures contract cannot be liquidated, the Advisor may not be able to realize a gain in the value of the position or prevent losses from mounting in the account. An inability to liquidate could occur, for example, if trading is halted due to unusual trading activity in either the futures contract or the underlying commodity; if trading is halted due to recent news events involving the issuer of the underlying commodity; if systems failures occur on an exchange or at the broker; or if the position is on an illiquid market. An exchange may set a maximum daily limit on market price increases and decreases and will halt trading when the limit is reached. In the event prices have risen or fallen by the maximum daily limit, and there is no trading in the contract permitted (known as a “lock limit” market), it may not be possible to execute an order at any price. Markets may be lock limit for more than one day, resulting in substantial losses to the account because the Advisor finds it impossible to liquidate losing futures positions. Even if the Advisor can liquidate the position, it may be at a price that involves a large loss to the account. For the same reasons, it may also be difficult or impossible for the Advisor to manage risk from open futures positions by entering into offsetting positions.

Portfolios also may be implemented through commodity pools, which are an alternative method of participating in futures trading. A commodity pool is a pooled investment vehicle that invests in commodities (and, typically, securities as well). A commodity pool participant will not have an individual trading account. Instead, the funds of all pool participants are combined and traded as a single account. Each investor shares in the profits or losses of the pool in proportion to his or her investment in the pool.

Although commodity pools can offer benefits such as greater diversification among commodities than an investor might obtain in an individual trading account, the absence of margin calls, and a limitation on losses to the amount invested, the risks a pool incurs in any given futures transaction are no different than the risks incurred by an individual trader. The pool still trades in futures contracts which are highly leveraged and in markets that can be highly volatile. And, like an individual trader, the pool can suffer substantial losses as well as realize substantial profits.

IMPORTANT INFORMATION ABOUT CURRENCIES AND FOREIGN EXCHANGE

Foreign currencies, or baskets of currencies, may be very volatile and may experience significant drops in value over a short period of time. The value of a foreign currency will depend on, among other economic indicators, movements in exchange rates. Risks and special considerations with respect to foreign currencies include, but are not limited to, economic uncertainties, currency devaluations, political and social uncertainties, exchange control regulations, high rates of interest, a history of government and private sector defaults, significant government influence on the economy, less rigorous regulatory and accounting standards than in the United States, relatively less developed financial and other systems, limited liquidity and higher price volatility of the related securities markets.
IMPORTANT INFORMATION ABOUT STRUCTURED PRODUCTS

Structured products ("Structures") are securities in which swaps, options, futures, forwards or other combinations or types of derivatives are embedded. Their return is typically linked to the performance of one or more underlying U.S. or international securities, indices, currencies, rates or commodities and may incorporate leverage. The Client understands that investments in Structures may not be suitable for all investors. The Client is aware that these types of investments entail varying degrees of risk, and that while some Structures offer full or partial principal protection, others can subject the Client to the loss of the full amount invested. In addition, the Client is dependent on the issuer’s financial capacity to meet its obligations under a Structure.

Structures used in managed accounts by the Advisor may be in the form of unsecured and unsubordinated debt obligations of JPMC (for accounts which are not IRAs or governed by ERISA) or various third-party issuers, and may also take the form of deposits (which may or may not be insured or guaranteed by the Federal Deposit Insurance Corporation or any other government authority), equity or partnership interests, trust certificates, warrants or interests in special purpose vehicles. Payment therefore will depend upon the issuer’s financial capacity to meet its obligations. Structures may or may not be registered under the Securities Act of 1933, as amended (the "Securities Act"), or under the securities laws of a state or other country and if not registered, will be sold and offered in a transaction that is intended to be exempt from registration under the Securities Act. The Client understands that Structures may not be publicly listed or traded on an exchange and therefore may be illiquid investments.

Prior to maturity, Structures issued by an issuer generally are repurchased only by the issuer and only upon terms and conditions acceptable to it, and, in most cases, the Structures are non-transferable and non-negotiable. In the event that an issuer consents to early liquidation, the Client will likely not fully participate in any benefits of the Structure, such as principal protection, buffers or enhanced returns. The price offered by the issuer will likely reflect the issuer’s costs of developing, hedging and distributing the Structure and may be lower than the principal amount of the Structure.

Investing in a Structure is not the same as investing directly in the underlying asset. The return on a Structure at maturity generally will not be the same as the return on a direct investment in the underlying asset, and the maximum payment on a Structure may be subject to a cap, which would limit appreciation potential compared to a direct investment. An investor in a Structure linked to an equity or equity index does not have voting rights or the right to receive dividends, and the return on the Structure will not reflect dividends, distributions or other payments that would increase the return on a direct investment. The return on the Structure will reflect any volatility in the underlying asset. Certain commodities and currencies are highly volatile, which means that their value may change significantly, up or down, over a short period of time. It is impossible to predict the future performance of any asset based on its historical performance. The amount of principal or interest that can be expected to become payable on a Structure may vary substantially from time to time. Because the amounts payable with respect to a Structure are generally calculated based on the value of or level of the underlying asset on a specified date, or over a limited period of time, the volatility of the underlying asset and the return on the Structure may be adversely affected by a fluctuation in the level of the underlying asset. The volatility of an asset, particularly a currency or commodity, may be affected by political or economic events, including governmental actions, or by the activities of participants in the relevant markets.

Issuers of Structures generally hedge their exposure on the Structure. Such hedging may involve the issuer, directly or through its affiliates, entering into transactions involving the securities, commodities, currencies or other instruments underlying the Structure, or derivative instruments, such as swaps, options or futures, on the underlying asset. By engaging in transactions of this kind, the issuer could adversely affect the value of a Structure and could achieve substantial returns from its hedging transactions, while the value of the Structure may decline. Issuers and their affiliates also may engage in trading, including trading for hedging purposes, for their proprietary accounts or for other accounts under their management, in the securities, commodities, currencies or other instruments underlying a Structure, or in other derivative instruments related to the underlying asset. These trading activities could adversely affect the value of a Structure. The issuer and its affiliates may also introduce competing products into the marketplace and adversely affect the value of a Structure thereby.

The value of a Structure that is reported on the Client’s monthly statement is provided by the issuer and is not independently verified by JPMC. The value is determined using the issuer’s own pricing and valuation models, market inputs and assumptions relating to the underlying asset, financial instruments based on the underlying asset, volatility and other factors, including current and expected interest rates, as well as an interest rate related to the implied interest rate at which the issuer’s conventional fixed rate debt trades in the secondary market (the “secondary market credit spread”). The original issue price of a Structure includes costs associated with issuing, selling, structuring and hedging the Structure, which are borne by the Client, and, consequently, the estimated value of a Structure on the pricing date will be less than its notional amount. When setting the initial price, the issuer generally takes into account that a Structure comprises both a debt component and a performance-based component linked to the underlying asset. In determining the economic terms of a Structure, the issuer generally will use an internal funding rate that is likely to be lower than its secondary market credit spreads, and therefore advantageous to the issuer. If the issuing, selling, structuring and hedging costs borne by the Client were lower, or if the internal funding rate were higher, one or more terms of a Structure would be more favorable to the Client. The cost of hedging the issuer’s obligations under a Structure includes an estimated profit component.

The issue price of a Structured Product will reflect the costs associated with issuing, selling, structuring and hedging a Structured Product, and will include compensation to an issuer or its affiliate for structuring work involved in packaging a Structured Product as one instrument. Cost and compensation will vary with each Structure. Details on the specific fees and costs associated with each note will be contained in the term sheet for the Structured Product. A Structured Product may also include an annual fee embedded in an index or calculation, payable to the issuer or index sponsor for structuring or calculating a proprietary index or formula. If a Structured Product has an early redemption feature and is redeemed prior to maturity, the compensation will not be prorated to the period during which the Structured Product was outstanding and, as a result, the rate of compensation will be higher.

The Advisor’s affiliate is the distributor of Structures issued by third party issuers as well as those issued by JPMC. The Advisor has a conflict of interest when Portfolios are invested in Structures issued by its affiliates because it increases the overall revenue of JPMC. The Advisor addresses this conflict by requiring its distributor to use “best execution” practices when selecting issuers as well as through disclosures and various formal arrangements. Such best execution practices may include comparing prices for new issue securities by a number of providers (though the trading desk effecting such trade has discretion to choose issuers other than the cheapest bidder for reasons such as credit or other concerns). For secondary selling of securities, the ability to compare market prices is limited; as such, general practice will involve selling the security back to the issuer of the security.

Use of structured products may not be suitable for all investors. Neither JPMorgan Chase Bank, N.A. nor any of its affiliates render tax or legal advice. Therefore, the Advisor strongly encourages the Client to consult with outside tax and legal professionals regarding the potential that the use of structured products may generate unwanted excise taxes, income taxes and penalties under the Internal Revenue Code of 1986, as amended, including, without limitation, excise taxes on self-dealing under Section 4941, taxes on investments that jeopardize charitable purposes under Section 4944, and taxes on Unrelated Business Taxable Income ("UBTI") under Sections 511 and 512, any or all of which may affect the return on investment and the exempt tax status of the Client’s account.

Inasmuch as the Advisor has discretion to invest in a Structure in the Client’s name, no prospectus of the asset or for the Structure (collectively, an "offering document") will be delivered to the Client prior to an investment. However, the Advisor will provide a copy of any offering document to the Client upon request.

IMPORTANT INFORMATION ABOUT REAL ESTATE

Real estate investments are likely to be illiquid and long-term. Real estate ownership and the real estate industry in general are subject to many risks, including the burdens of ownership of real property; local, national and international economic conditions; supply and demand for properties; the financial condition of tenants, buyers and sellers; changes in interest rates and the availability of mortgage funds; changes in environmental laws and regulations, planning laws and other governmental rules and fiscal and monetary policies; claims arising out of environmental problems or as to which inadequate reserve funds have been established; changes in real property tax rates; changes in energy prices; force majeure events; terrorist events; and underinsured or uninsurable losses. Real estate assets are subject to long-term cycles that give rise to significant volatility in values.

Illiquidity may result from the absence of an established market for the property. Even if real estate investments are successful, they are unlikely to produce a realized return to the investors for a period of years.

Securities issued by real estate fund companies, including REITs, are subject to the risks associated with the direct ownership of real estate as well as the risks associated with the fund company or REIT itself. Such companies carry the risks of possibly limited operating history, unspecified portfolios, uncertainties in calculating net asset value due to reliance upon appraisals, and restrictions on redemption arising out of the illiquidity of the underlying portfolio. REITs also carry the risk of the possible failure to qualify as a REIT under the Internal Revenue Code of 1986, as amended, which will have adverse tax consequences for investors.
An alternative investment involves a hedge fund

**General Characteristics and Risks**

Hedge funds often engage in leveraging and other speculative investment practices, which may increase the risk of the loss of the client’s investment. They are not subject to the same regulatory requirements as traditional mutual funds, but they engage in transactions that have higher total expense ratios compared to traditional funds, with higher annual management fees. Managers of alternative mutual funds cannot charge investors a “20%” fee based on percentage of assets withdrawn. Investors often are required to be invested in any one issuer. They are priced daily, and fund shares are readily marketable, and decisions of the manager may be subjective or based on proprietary information. (1) are not required to provide periodic pricing or valuation information; (2) do not use a broker-dealer affiliate of the Advisor as placement agent. The fees earned are a percentage of the hedge fund’s management fees and, in some instances, a percentage of the hedge fund’s performance fees. The Advisor generally chooses to invest in hedge funds through a broker-dealer affiliate of the Advisor. The fees earned by the broker-dealer affiliate are in addition to the fees the Advisor receives from the client in connection with the client’s account and will be received by the broker-dealer affiliate only where permitted for a client’s account or portfolio. The Advisor or its affiliate generally chooses to invest in hedge funds and other unregistered funds that do not use a broker-dealer affiliate of the Advisor as placement agent. The use of hedge funds that compensate a broker-dealer affiliate of the Advisor directly or by their sponsor for providing placement and other ongoing services involves a conflict of interest because JPMorgan Chase Bank, N.A. or any of its affiliates render tax or legal advice. Therefore, the Advisor strongly encourages the Client to consult with outside tax and legal professionals regarding the potential that the use of alternative investments may generate unwanted excise taxes, income taxes and penalties under the Internal Revenue Code of 1986, as amended, including, without limitation, excise taxes on self-dealing under Section 4941, taxes on investments that jeopardize charitable purposes under Section 4944, and taxes on UBTI under Sections 511 and 512, any or all of which may affect the return on investment and the exempt tax status of the Client’s account.

**Special Considerations for Registered Alternative Mutual Funds**

Alternative mutual funds utilize some of the strategies and investments that hedge funds employ, but they differ significantly from both hedge funds and traditional mutual funds. U.S. alternative mutual funds are regulated under the Investment Company Act of 1940 and EU alternative mutual funds are regulated under the Undertakings for Collective Investment in Transferable Securities Directives, which limit their operations in ways that do not apply to unregistered hedge funds. Unlike hedge funds, alternative mutual funds are subject to limits on illiquid investments as well as to leverage and diversification requirements (including limits on how much may be invested in any one issuer). They are priced daily, and fund shares are readily redeemable. Restrictions that may be imposed under extraordinary circumstances (see the section above on “Mutual Fund Liquidity Risks” for additional details). Moreover, managers of alternative mutual funds cannot charge investors a “20%” fee based on percentage of assets withdrawn. The fees earned are a percentage of the hedge fund’s management fees and, in some instances, a percentage of the hedge fund’s performance fees. The Advisor generally chooses to invest in hedge funds through a broker-dealer affiliate of the Advisor. The fees earned by the broker-dealer affiliate are in addition to the fees the Advisor receives from the client in connection with the client’s account and will be received by the broker-dealer affiliate only where permitted for a client’s account or portfolio. The Advisor or its affiliate generally chooses to invest in Global Access Portfolios in such funds, but also invests in hedge funds that do not use a broker-dealer affiliate of the Advisor as placement agent. The use of hedge funds that compensate a broker-dealer affiliate of the Advisor directly or by their sponsor for providing placement and other ongoing services involves a conflict of interest because JPMorgan Chase Bank, N.A. or any of its affiliates render tax or legal advice. Therefore, the Advisor strongly encourages the Client to consult with outside tax and legal professionals regarding the potential that the use of alternative investments may generate unwanted excise taxes, income taxes and penalties under the Internal Revenue Code of 1986, as amended, including, without limitation, excise taxes on self-dealing under Section 4941, taxes on investments that jeopardize charitable purposes under Section 4944, and taxes on UBTI under Sections 511 and 512, any or all of which may affect the return on investment and the exempt tax status of the Client’s account.

**Special Considerations for Unregistered Alternative Mutual Funds for Offshore Clients**

JPM may invest in alternative mutual funds that are governed by the Alternative Investment Fund Manager Directive (AIFMD). Alternative Mutual Investment Funds may include investment strategies similar to private funds and hedge funds. Such funds may or may not have the liquidity of traditional mutual funds, provide periodic pricing or valuation information to investors, and are subject to the same regulatory requirements as traditional mutual funds, but they engage in leveraging and other speculative investment practices commonly used by hedge funds.
that may increase the risk of complete loss of the investment. Such funds generally also charge higher fees than traditional mutual funds and have higher expenses. The use of leverage increases risk to a fund, and the more a fund invests in leveraged instruments, the more it could magnify gains or losses to those investments.

Special Considerations for Investors in the Global Access Portfolios

JPMorgan Chase Bank, N.A. is the investment manager for Global Access Portfolios, LLC, the issuer of interests (shares) in each of the Global Access Portfolio strategies. Investments in the Global Access Portfolios may be used to achieve, wholly or in part, the investment profile, and the underlying investments in the Portfolios will be utilized for portfolio construction and strategic asset allocation. Investors in the Global Access Portfolios bear costs relating to the entity, and may pay performance fees to the Advisor in addition to an investment management fee. However, JPMCC will not retain such additional revenue when the Client’s account is an IRA or is governed by ERISA. Instead, the account advisory fees will generally be offset by an amount equal to the account’s pro rata share of all such fees paid to JPMC. The Global Access Portfolios share certain characteristics with hedge funds. A “lock-up” of one year or more and an early redemption penalty may apply to investments in the Portfolios. Moreover, a withdrawal premium may be required to pay proceeds in their entirety until 45 days after completion of a Portfolio’s audit, which will not begin until after the close of the fiscal year in which the reorganization occurs. The audit generally takes eight months to complete, but could take longer. Interest will not be paid on any proceeds. These restrictions on liquidity apply even if the investor’s account at J.P. Morgan is closed. The Confidential Private Placement Memorandum and applicable Supplements contain other important information about the Global Access Portfolios and are available upon request.

IMPORTANT INFORMATION ABOUT PUBLICLY TRADED PARTNERSHIPS/MASTER LIMITED PARTNERSHIPS

A “publicly traded partnership” (a “PTP”) is a partnership or limited liability company whose units trade on a stock exchange. PTPs sometimes are referred to as “master limited partnerships” or “MLPs.” By law, PTPs must limit their businesses to designated industries, typically, energy, natural resources, and real estate, and therefore are subject to the risks of those industries. In particular, a decline in commodity prices could cause a sharp decline in a PTP’s cash flow, which will affect distributions to investors. PTPs behave in an interest-rate-sensitive fashion similar to bonds. As interest rates rise, PTP unit prices decrease, and as interest rates decrease, PTP unit prices increase.

PTPs generally receive quarterly cash distributions. Such distributions are not guaranteed and investors run the risk that distributions may be adjusted downward or cancelled. Distributions are based on cash flow (generally net earnings plus depreciation minus certain expenses) and are not the same as the investor’s share of the PTP’s income. Under the Internal Revenue Code, distributions are a return of capital and are not taxed when received. However, distributions effectively are added to taxable gains when the PTP units are sold. Some gains (those attributable to depreciation and certain assets) are taxed as ordinary income and not at capital gains rates.

PTP taxation is very complex. There is no corporate or entity-level tax, and all tax items flow through to the limited partners or members, who pay taxes at their own rates, investors get a tax statement on Form K-1 from the PTP and must be prepared to file for an extension of the deadline to file their tax returns in the event the K-1 is not distributed timely. In addition, investors are considered to be “earning” taxable income in any state where the PTP is earning income, and investors are responsible for any state tax on that income. Also, investors may be required to file tax returns in each state in which the PTP operates. If the investor is a tax-exempt entity, such as an IRA, the account’s share of net partnership income over $1,000 is likely to be subject to UBTI, which will involve a tax filing as well. Distributions are not subject to UBTI. Income tax law changes could alter the generally favorable tax treatment for PTPs.

SECTION IV--ADDITIONAL RISKS AND IMPORTANT INFORMATION

IMPORTANT INFORMATION ABOUT TRADING

Conflicts Related to Allocation and Aggregation

Potential conflicts of interest arise involving both the aggregation of trade orders and allocation of securities transactions or investment opportunities. Allocations of aggregated trades, particularly trade orders that were only partially filled due to limited availability, and allocation of investment opportunities raise a potential conflict of interest because we have an incentive to allocate trades or investment opportunities to certain accounts, clients or funds. For example, we have an incentive to cause accounts we manage to participate in an offering where such participation could increase our overall allocation of securities in that offering.

We have established policies, procedures and practices to manage the conflicts described above. Our allocation and order aggregation practices are designed to achieve a fair and equitable allocation and execution of investment opportunities among our client accounts over time, and these practices are designed to comply with securities laws and other applicable regulations. In addition to the aforementioned policies, procedures and practices, we also monitor a variety of areas, including compliance with account guidelines, fixed income new issue allocation decisions, and any material discrepancies in the performance of similar accounts.

Different Trade Execution Prices

We may manage a Portfolio or appoint another JPMCC affiliate or an unaffiliated person or entity as a sub-advisor to provide advisory or investment management services. We, or the sub-advisor, also provides advice to one or more other JPMC affiliates. To the extent we or another JPMCC affiliate receives investment advice outside of the normal business hours, we may not consider such advice until the next business day. Depending on the geographic location, or due to other reasons, the Advisor, the affiliated or unaffiliated sub-advisor or the other JPMC affiliate each may implement investment decisions at different times. This means that you may receive a different price for an underlying security than a client of another such person or entity invested in the same or a similar strategy.

Conflicts Related to Trade Execution

The Advisor is able to trade with J.P. Morgan Securities LLC, an affiliated broker-dealer, as a trading counterparty (but such practice does not apply to IRA accounts or accounts governed by ERISA). If we buy or sell securities from or to J.P. Morgan Securities LLC acting as a dealer or underwriter, we may buy or sell as principal such securities from or to such JPMCC affiliate, or from or to a member of an underwriting syndicate of which J.P. Morgan Securities LLC is a member. As such, there is a benefit to the affiliated broker-dealer since its overall revenues are increased. The Advisor manages this conflict through disclosure to clients as well as through various governance and oversight forums.

Conflicts Related to Trading Systems

The Advisor may effect trades on behalf of the account through exchanges, electronic communication networks, alternative trading systems and similar execution systems and trading venues (collectively, “Trading Systems”), including Trading Systems in which JPMCC may have a direct or indirect ownership interest. JPMCC may receive indirect proportionate compensation based upon its ownership percentage in relation to transaction fees charged by such Trading Systems in which it has an ownership interest. Such Trading Systems (and the extent of JPMC’s ownership interest in any Trading System) may change from time to time. If you would like more information, please reach out to your J.P. Morgan team.

IMPORTANT INFORMATION ABOUT RESEARCH AND OTHER SOFT DOLLAR BENEFITS

Subject to its best execution policy, the Advisor can use a portion of clients’ equity trading commissions to purchase eligible brokerage and research services (“soft dollar benefits”), in a manner consistent with the “safe harbor” requirements of Section 28(e) of the Securities Exchange Act of 1934, and provided that the commission is reasonable in relation to the value of the products or services provided by the broker-dealer. Best execution does not necessarily mean the lowest commission or price, but instead involves consideration of a number of factors.

The Advisor and its U.S. affiliates have an incentive to select a particular broker-dealer to obtain soft dollar benefits through client brokerage commissions because they do not need to produce or pay for the research or brokerage services. This conflict of interest is mitigated by the Advisor and U.S. affiliates’ adherence to its respective best execution policy and oversight of trading practices.

Allocation of Soft Dollar Benefits

The research obtained from soft dollars can be used to benefit other JPMC clients and is not limited to the client accounts that generated the credits. Additionally, the research is not allocated to client accounts proportionately to the soft dollar credits that the accounts generate. The Advisor shares research reports, including those that have been obtained as soft dollar benefits, with its U.S. affiliates.

IMPORTANT INFORMATION ABOUT INVESTMENT RESEARCH, OVERSIGHT AND OPERATIONAL DUE DILIGENCE

The Advisor’s Manager Solutions team provides a qualitative research process (the “Research Process”) overseen by independent onboarding and ongoing monitoring committees to approve all third party and affiliated funds and third party and affiliated separately managed account managers that are available for investment in your Portfolio. The Research Process does not apply for any strategies that are internally managed by the Advisor’s portfolio managers; however, those strategies are subject to separate oversight and ongoing monitoring of performance. As part of the Research Process, the Manager Solutions team conducts a qualitative analysis of the third party and affiliated funds and managers on an ongoing basis. Specifically, the team reviews the portfolio manager’s organization and personnel, investment process, investment philosophy and performance on an ongoing basis.

The Advisor’s Operational Due Diligence (“ODD”) team contributes to the Research Process overseen by independent onboarding and ongoing monitoring committees. ODD’s focus is on the operational infrastructure and capabilities of all third party and
affiliated funds and third party and affiliated SMA managers that are available for investment in your Portfolio. Strategies that are internally managed by the Advisor’s portfolio managers are subject to separate oversight and ongoing monitoring of performance with input by and contribution from the ODD team. As part of the Research Process, the ODD team conducts a qualitative analysis of all third party and affiliated funds and third party and affiliated SMA managers on an ongoing basis. The focus of this review is specific to the investment manager’s organization, personnel, trade life-cycle, systems infrastructure, and control framework. ODD does not consider investment philosophy or performance.

IMPORTANT INFORMATION ABOUT FUNDING YOUR PORTFOLIO WITH SECURITIES

Depending on the particular investment strategy, cash or securities can be used to fund your Portfolio. If you fund your Portfolio with securities, you direct the Advisor or an affiliate, unless otherwise directed as outlined below, to liquidate the securities on your behalf and allocate the proceeds in accordance with the investment strategy that you have selected. Generally, the Advisor on a best efforts basis will sell any securities that are not part of the current investment strategy that you have selected. Depending on the strategy and the account, liquidation can result in additional costs, taxable gains or losses. You should understand the costs involved in using securities to fund your Portfolio, as well as review the potential tax consequences of liquidations with your tax advisor, before funding your Portfolio with securities. The Advisor and its affiliates do not provide tax advice.

If you transfer securities into your Portfolio, you may request to have us work with you to transition such securities into your Portfolio in a more tax efficient manner (“Tax Transition Plan”). You will work with your J.P. Morgan team to discuss which securities (or any particular security or securities) can be held in your Portfolio and sold over an extended period of time, at the Advisor’s sole discretion. You understand that the sale of these securities may generate taxable income and the Advisor does not make any guarantees regarding tax implications with respect to your Portfolio. Please discuss your specific Tax Transition Plan and Portfolio with your tax advisor. Requesting that any security be held for an extended period of time requires the Advisor to deviate from the model portfolio guidelines and/or from the investment strategy that you have selected. The longer the period for transition, the longer the deviation from the model portfolio guidelines and/or from the investment strategy. As such, your performance will differ from the performance of other clients that are invested in the same model portfolio or investment strategy.

The Advisor will not verify the accuracy of any external account information, including account statements provided by you from third parties. The validity of recommendations provided by the Advisor and any analyses contained in any report provided by the Advisor is dependent upon the accuracy and thoroughness of the data and information provided by you. The use of incomplete or inaccurate data and information will result in different outcomes. The tax implications set forth in any report or any guidance provided by the Advisor pursuant to your Tax Transition Plan are not guaranteed and should not be viewed as tax advice. Actual tax incurred by you will vary from any illustrated projections provided by the Bank pursuant to your Tax Transition Plan. You should contact your tax advisor at least annually to review your Tax Transition Plan. Your plan can be modified at any point in time during discussion with your J.P. Morgan team.

IMPORTANT INFORMATION ABOUT TAXES

Account transactions may give rise to tax liability for which Client is responsible. The Client understands that mutual funds and exchange-traded funds may make large distributions of interest and dividends to investors at various times in a calendar year, and Client will be liable for taxes on such distributions without regard to the date of Client’s investment in a Portfolio. Client understands and acknowledges that the Advisor and its affiliates do not provide tax advice and the Client should consult his or her own tax advisor with respect to the federal, state and local tax consequences of investing in any Portfolio, including, without limitation, the potential application and impact of Section 1091 of the Internal Revenue Code of 1986, as amended, and the corresponding Treasury regulations (the “wash sale rules”) with respect to Client’s Portfolio and Client’s accounts inside or outside of J.P. Morgan. Client agrees that Client is responsible for complying with all applicable tax rules, including, but not limited to, the wash sale rules.

Certain securities may not be suitable for tax-exempt investors. As mentioned above, neither the Advisor nor any of its affiliates render tax or legal advice and Client must consult with outside tax and legal professionals regarding the potential that investments in certain securities (including, but not limited to, hedge funds, private equity funds, and real estate funds) may generate unwanted excise taxes, income taxes and penalties under the Internal Revenue Code of 1986, as amended, including, without limitation, excise taxes on self-dealing under Section 4941, taxes on investments which jeopardize charitable purposes under Section 4944, and taxes on UBTI under Sections 511 and 512, any or all of which may affect the Client’s return on investment and exempt tax status.

Cost Basis Information and Reporting

The Internal Revenue Code requires J.P. Morgan to report to you and the Internal Revenue Service (“IRS”) cost basis and other relevant information (collectively “Cost Basis Information”) concerning investments held in your non-retirement accounts. The Cost Basis Information can vary depending on the cost basis method applicable to the investments within your account. The cost basis method applied to your account determines the order in which shares are redeemed when you sell your investments.

You have the ability to select your cost basis method during the opening of your account, however J.P. Morgan is authorized to choose and apply any legally permissible cost basis method to sales of securities in your account.

Neither J.P. Morgan nor its representatives or affiliates offer tax or accounting advice or services, and you will not solicit or rely upon any such advice from them.

ADDITIONAL IMPORTANT INFORMATION ABOUT YOUR INVESTMENTS

General Market Risk
Economies and financial markets throughout the world are becoming increasingly interconnected, which increases the likelihood that events or conditions in one country or region will adversely impact markets or issuers in other countries or regions. Securities in any one country may be affected by developments in other countries, and such developments may result in price movements in securities of issuers in other countries that are not reflective of the country’s underlying economic conditions.

Emerging Markets Risk
International investing bears greater risk due to social, economic, regulatory and political instability in countries in “emerging markets.” Emerging market securities can be more volatile and less liquid than developed market securities. Changes in exchange rates and differences in accounting and taxation policies outside the U.S. can also affect returns. Investments in foreign currencies and foreign issuers are subject to additional risks, including political and economic risks, greater volatility, civil conflicts and war, currency fluctuations, higher transaction costs, delayed settlement, possible foreign controls on investment, expropriation and nationalization risks, and less stringent investor protection and disclosure standards. These risks are magnified in countries in “emerging markets.”

Data and Information Risk
Although J.P. Morgan obtains data and information from third party sources that it considers to be reliable, J.P. Morgan does not warrant or guarantee the accuracy and/or completeness of any data or information provided by these sources. J.P. Morgan does not make any express or implied warranties of any kind with respect to such data. J.P. Morgan shall not have any liability for any errors or omissions in connection with any data provided by third party sources.

Cybersecurity Risk
As the use of technology has become more prevalent in the course of business, the Advisor has become more susceptible to operational and financial risks associated with cybersecurity, including: theft, loss, misuse, improper release, corruption and destruction of, or unauthorized access to, confidential or highly restricted data relating to the Advisor and its clients, and compromises or failures to systems, networks, devices and applications relating to the operations of the Advisor and its service providers.

Cybersecurity risks can result in financial losses to the Advisor and its clients; the inability of the Advisor to transact business with its clients; delays or mistakes in materials provided to clients; the inability to process transactions with clients or other parties; violations of privacy and other laws; regulatory fines, penalties and reputational damage; and compliance and remediation costs, legal fees and other expenses. The Advisor’s service providers (including any sub-advisers, administrator, transfer agent, and custodian or their agents), financial intermediaries, companies in which client accounts and funds invest and parties with which the Advisor engages in portfolio or other transactions also may be adversely impacted by cybersecurity risks in their own businesses, which could result in losses to the Advisor or its clients. While measures have been developed which are designed to reduce the risks associated with cybersecurity, there is no guarantee that those measures will be effective, particularly since the Advisor does not directly control the cybersecurity defenses or plans of its service providers, financial intermediaries and companies in which they invest or with which they do business.
Ownership Interest in J.P. Morgan Stock Certain asset management firms (each, an “asset manager”) through their funds and separately managed accounts currently hold a 5% or more ownership interest in JPMorgan Chase & Co, publicly traded stock. This ownership interest presents a conflict of interest when the Advisor, J.P. Morgan Securities LLC, and J.P. Morgan Private Investments Inc. (collectively “JPM”) recommends or purchases the publicly traded security of the asset manager or the separately managed accounts or funds that are managed or advised by the asset manager. JPM addresses this conflict by disclosing the ownership interest of the asset manager and by subjecting the asset manager’s separately managed accounts and funds to a research process. Additionally, the financial advisers and portfolio managers that may purchase or recommend securities, separately managed accounts and funds of an asset manager that has an ownership interest in J.P. Morgan, do not receive any additional compensation for that purchase or recommendation. A fund ownership interest in J.P. Morgan can cause the fund and its affiliates to determine that they are unable to pursue a transaction or the transaction will be limited or the timing altered. J.P. Morgan monitors ownership interests in J.P. Morgan for regulatory purposes and to identify and mitigate actual and perceived conflicts of interest. As of December 31, 2020, both Vanguard and BlackRock held more than a 5% interest in J.P. Morgan.

Infectious Disease Risk The outbreak of COVID-19, a novel coronavirus disease, has negatively affected economies, markets and individual companies throughout the world, including holdings in the Portfolio. The effects of this pandemic to public health and business and market conditions, including exchange trading suspensions and closures may continue to have a significant negative impact on the performance of the investments in the Portfolio, increase separately managed account and fund volatility, impact arbitrage and pricing mechanisms for certain investments in the Portfolio, exacerbate preexisting political, social, and economic risks to investments in the Portfolio, and negatively impact broad segments of businesses and populations. The Advisor’s operations may be interrupted as a result, which may contribute to the negative impact on investment performance. In addition, governments, their regulatory agencies, or self-regulatory organizations may take actions in response to the pandemic that affect the investments in the Portfolio, or the issuers of such investments in ways that could have a significant negative impact on the Portfolio’s investment performance. The full impact of the COVID-19 pandemic, or other future epidemics or pandemics, is currently unknown.

LIBOR Discontinuance or Unavailability Risk The London Interbank Offering Rate (“LIBOR”) is intended to represent the rate at which contributing banks may obtain short-term borrowings from each other in the London interbank market. The administrator of LIBOR (the “Administrator”) has publicly announced that it will cease the publication of certain tenors and currencies of LIBOR on certain future dates; current information about these dates is available at https://www.jpmorgan.com/disclosures/interbank-offered-rates. There is no assurance that the dates announced by the Administrator will not change or that the Administrator and/or regulators will not take further action that could impact the availability, composition or characteristics of LIBOR or the currencies and/or tenors for which LIBOR is published, and we recommend that you consult your advisors to stay informed of any such developments. Public and private sector industry initiatives are currently underway to implement new or alternative reference rates to be used in place of LIBOR. There is no assurance that any such alternative reference rate will be similar to or produce the same value or economic equivalence as LIBOR or that it will have the same volume or liquidity as did LIBOR prior to its discontinuance or unavailability, which may affect the value or liquidity or return on certain of a fund’s or other client account’s loans, notes, derivatives and other instruments or investments comprising some or all of a fund’s or other client account’s portfolio and result in costs incurred in connection with closing out positions and entering into new trades. These risks may also apply with respect to changes in connection with other interbank offering rates (e.g., Euribor) and a wide range of other index levels, rates and values that are treated as “benchmarks” and are the subject of recent regulatory reform.

Benchmark Reforms Risk As described above, interest rates (such as LIBOR or EURIBOR) and a wide range of other index levels, rates and values are treated as “benchmarks” and are the subject of recent regulatory reform. There are certain risks associated with loans, derivatives, floating rate securities and other instruments or investments that rely on a benchmark that changes or is affected by benchmark reforms. While benchmark reforms are intended to make benchmarks more robust, the reforms may cause benchmarks to perform differently than in the past, to disappear entirely or have other consequences that cannot be predicted. This could have a material impact on any investments linked to or referencing such a benchmark. Such impact may include (i) reducing or increasing the volatility of the published rate or level of the benchmark, (ii) early redemption or termination of the investment or (iii) adjustments to the terms of the investment. Any of these impacts may be disadvantageous to investors. In particular, reforms may increase costs and risks associated with investments that use an affected benchmark.
