

INDEX SUPPLEMENT

JPMORGAN ETF EFFICIENTE 5 INDEX

This document contains information solely about the JPMorgan ETF Efficiente 5 Index (the “**Index**”) which was provided by J.P. Morgan Securities LLC solely in its capacity as a licensor of the Index. The Index and certain relevant “Risk Factors” are described in further detail within the document and are qualified in their entirety by the index rules (the “**Index Rules**”) which are appended hereto. Please read the information under the section titled “*Important Information*” below before reading any other material in this document.

IMPORTANT INFORMATION

The JPMorgan ETF Efficiente 5 Index (the “**JPMorgan Index**”) has been and may be licensed to one or several licensees (collectively, the “**Licensee**”) for the Licensee’s benefit. Neither the Licensee nor any product of the Licensee (the “**Product**”) is sponsored, operated, endorsed, sold or promoted by J.P. Morgan Securities LLC (“**JPMS**”) or any of its affiliates (together and individually, “**JPMorgan**”). JPMorgan makes no representation and no warranty, express or implied, to owners of the Product (or any person taking exposure to it) or any member of the public in any other circumstances (each a “**Contract Owner**”): (a) regarding the advisability of investing in securities or other financial or insurance products generally or in the Product particularly; or (b) the suitability or appropriateness of an exposure to the JPMorgan Index in seeking to achieve any particular objective. It is for those taking an exposure to the Product and/or the JPMorgan Index to satisfy themselves of these matters and such persons should seek appropriate professional advice before making any investment. JPMorgan is not responsible for and does not have any obligation or liability in connection with the issuance, administration, marketing or trading of the Product. The publication of the JPMorgan Index and the referencing of any asset or other factor of any kind in the JPMorgan Index do not constitute any form of investment recommendation or advice in respect of any such asset or other factor by JPMorgan, and no person should rely upon it as such. JPMorgan does not act as an investment adviser or investment manager in respect of the JPMorgan Index or the Product and does not accept any fiduciary duties in relation to the JPMorgan Index, the Licensee, the Product or any Contract Owner.

The JPMorgan Index has been designed and is compiled, calculated, maintained and sponsored by JPMorgan without regard to the Licensee, the Product or any Contract Owner. The ability of the Licensee to make use of the JPMorgan Index may be terminated on short notice and it is the responsibility of the Licensee to provide for the consequences of that in the design of the Product. JPMorgan does not accept any legal obligation to take the needs of any person who may invest in a Product into account in designing, compiling, calculating, maintaining or sponsoring the JPMorgan Index or in any decision to cease doing so.

JPMorgan does not give any representation, warranty or undertaking, of any type (whether express or implied, statutory or otherwise) in relation to the JPMorgan Index, as to condition, satisfactory quality, performance or fitness for purpose or as to the results to be achieved by an investment in the Product or any data included in or omissions from the JPMorgan Index, or the use of the JPMorgan Index in connection with the Product or the veracity, currency, completeness or accuracy of the information on which the JPMorgan Index is based (and, without limitation, JPMorgan accepts no liability to any Contract Owner for any errors or omissions in that information or the results of any interruption to it and JPMorgan shall be under no obligation to advise any person of any such error, omission or interruption). To the extent any such representation, warranty or undertaking could be deemed to have been given by JPMorgan, it is excluded save to the extent that such exclusion is prohibited by law. To the fullest extent permitted by law, JPMorgan shall have no liability or responsibility to any person or entity (including, without limitation, to any Contract Owner) for any losses, damages, costs, charges, expenses or other liabilities howsoever arising, including, without limitation, liability for any special, punitive, indirect or consequential damages (including loss of business or loss of profit, loss of time and loss of goodwill), even if notified of the possibility of the same, arising in connection with the design, compilation, calculation, maintenance or sponsoring of the JPMorgan Index or in connection with the Product.

The JPMorgan Index is the exclusive property of JPMorgan. JPMorgan is under no obligation to continue compiling, calculating, maintaining or sponsoring the JPMorgan Index and may delegate or transfer to a third party some or all of its functions in relation to the JPMorgan Index.

JPMorgan may independently issue or sponsor other indices or products that are similar to and may compete with the JPMorgan Index and the Product. JPMorgan may also transact in assets referenced in the JPMorgan Index (or in financial

instruments such as derivatives that reference those assets). It is possible that these activities could have an effect (positive or negative) on the value of the JPMorgan Index and the Product.

Each of the above paragraphs is severable. If the contents of any such paragraph is held to be or becomes invalid or unenforceable in any respect in any jurisdiction, it shall have no effect in that respect, but without prejudice to the remainder of this notice.

RISK FACTORS

Risks Relating to the JPMorgan ETF Efficiente 5 Index (the “ETF Efficiente Index”)

J.P. Morgan Securities plc (“JPMS plc”), the index calculation agent, may adjust the ETF Efficiente Index in a way that affects its level, and JPMS plc has no obligation to consider any person’s interests.

JPMS plc, one of our affiliates, currently acts as the index calculation agent and is responsible for calculating and maintaining the ETF Efficiente Index and developing the guidelines and policies governing its composition and calculation. It is entitled to exercise discretion in relation to the ETF Efficiente Index, including but not limited to the calculation of the level of the ETF Efficiente Index in the event of an Index Market Disruption Event (as defined in “The JPMorgan ETF Efficiente 5 Index”). Although JPMS plc acting as the index calculation agent will make all determinations and take all action in relation to the ETF Efficiente Index acting in good faith, it should be noted that the policies and judgments for which JPMS plc is responsible could have an impact, positive or negative, on the level of the ETF Efficiente Index. JPMS plc may also amend the rules governing the ETF Efficiente Index in certain circumstances.

Although judgments, policies and determinations concerning the ETF Efficiente Index are made by JPMS plc, JPMorgan Chase Bank, N.A., as the parent company of JPMS plc, ultimately controls JPMS plc. JPMS plc has no obligation to consider any person’s interests in taking any actions. Furthermore, the inclusion of the Basket Constituents in the ETF Efficiente Index is not an investment recommendation by us or JPMS plc of the Basket Constituents, or any of the securities, commodities or futures contracts underlying the Basket Constituents. See “The JPMorgan ETF Efficiente 5 Index.”

JPMorgan Chase & Co. is affiliated with the sponsor of one of the Basket Constituents and with the sponsor of the index underlying one of the ETF Constituents.

J.P. Morgan Securities LLC, which we refer to as JPMS, is the sponsor of one of the Basket Constituents (the JPMorgan Cash Index USD 3 Month). JPMS will have no obligation to consider any person’s interests in taking any actions.

JPMS is also the sponsor of the JPMorgan EMBI Global Core Index, which is the index underlying the iShares[®] JPMorgan USD Emerging Markets Bond Fund, one of the Basket Constituents. JPMS may, as a last resort, if there are no valid prices available for composite instruments included in the JPMorgan EMBI Global Core Index, price such composite instruments by asking JPMS traders to provide a market bid and ask. Neither JPMS nor JPMorgan Chase & Co. will have any obligation to consider any person’s interests in taking any actions.

JPMorgan Chase & Co. is one of the companies that make up the SPDR[®] S&P 500[®] ETF Trust, and, JPMorgan Chase & Co. may be or may be affiliated with other companies the securities of which are held by the Basket Constituents.

JPMorgan Chase & Co. is currently one of the companies that make up the SPDR[®] S&P 500[®] ETF Trust, but, to JPMorgan Chase & Co.’s knowledge, JPMorgan Chase & Co. is not currently affiliated with any other issuers the securities of which are held by the Basket Constituents. As a result, JPMorgan Chase & Co. will have no ability to control the actions of the other issuers of such securities, including actions that could affect the value of the securities held by the Basket Constituents. Neither those other issuers nor JPMorgan Chase & Co. will have any obligation to consider any person’s interests in taking any actions.

In the event JPMorgan Chase & Co. becomes affiliated with any other issuers the equity securities of which are held by any Basket Constituent, JPMorgan Chase & Co. will have no obligation to consider any person’s interests in taking any action with respect to such issuer.

The ETF Efficiente Index may not be successful, outperform any alternative strategy that might be employed in respect of the Basket Constituents or achieve its target volatility.

The ETF Efficiente Index follows a notional rules-based proprietary strategy that operates on the basis of pre-determined rules. No assurance can be given that the investment strategy on which the ETF Efficiente Index is based

will be successful or that the ETF Efficient Index will outperform any alternative strategy that might be employed in respect of the Basket Constituents. Furthermore, no assurance can be given that the JPMorgan ETF Efficient 5 Index will achieve its target volatility of 5%. The actual realized volatility of the JPMorgan ETF Efficient 5 Index may be greater or less than 5%.

If the market values of the Basket Constituents changes, the level of the ETF Efficient Index may not change in the same manner.

Changes in the market values of the Basket Constituents may not result in a comparable change in the level of the ETF Efficient Index.

The ETF Efficient Index comprises notional assets and liabilities.

The exposures to the Basket Constituents are purely notional and will exist solely in the records maintained by or on behalf of the index calculation agent. There is no actual portfolio of assets to which any person is entitled or in which any person has any ownership interest. Consequently, you will not have any claim against any of the reference assets that comprise the ETF Efficient Index. The strategy tracks the excess return of a notional dynamic basket of assets over the Cash Constituent and, as such, any allocation to the Cash Constituent will result in this portion of the portfolio not being invested. Unless an extraordinary event occurs, the Cash Constituent will be subject to a maximum weight of 50% in the ETF Efficient Index. See “The JPMorgan ETF Efficient 5 Index — Extraordinary Events” for information about the consequences of an extraordinary event.

The level of the ETF Efficient Index will include the deduction of a fee.

One way in which the ETF Efficient Index may differ from a typical index is that its level will include a deduction from the performance of the Basket Constituents over the Cash Constituent of a fee of 0.50% per annum. This fee will be deducted daily. As a result of the deduction of this fee, the level of the ETF Efficient Index will trail the value of a hypothetical identically constituted synthetic portfolio from which no such fee is deducted.

The ETF Efficient Index has a limited operating history and may perform in unanticipated ways.

The ETF Efficient Index was established on October 29, 2010 and therefore has a limited operating history. Past performance should not be considered indicative of future performance.

The ETF Efficient Index is subject to market risks.

The performance of the ETF Efficient Index is dependent on the performance of the thirteen Basket Constituents.

Standard & Poor’s downgrade of the U.S. government’s credit rating, and any future downgrades by credit rating agencies, may adversely affect the performance of the ETF Efficient Index.

On August 6, 2011, Standard & Poor’s Ratings Services (“Standard & Poor’s”), downgraded the U.S. government’s credit rating from AAA to AA+. Additionally, Standard & Poor’s and Moody’s Investor Services, Inc. have assigned a negative outlook on the U.S. government’s credit rating, meaning that the agencies may downgrade the U.S. government’s credit rating in the next year or two. The downgrade has increased and may continue to increase volatility in the global equity and credit markets, which may adversely affect the levels of the Basket Constituents. Future downgrades by credit ratings agencies may also increase this volatility. These events may also increase short-term borrowing costs, including the 3-month LIBOR rate underlying the Cash Constituent, which will adversely affect the level of the ETF Efficient Index.

There are risks associated with the ETF Efficient Index’s momentum investment strategy.

The ETF Efficient Index is constructed using what is generally known as a momentum investment strategy. Momentum investing generally seeks to capitalize on positive trends in the price of assets. As such, the weights of the Basket Constituents in the ETF Efficient Index are based on the performance of the Basket Constituents from the immediately preceding six months. However, there is no guarantee that trends existing in the preceding six months will continue in the future. A momentum strategy is different from a strategy that seeks long-term exposure to a portfolio

consisting of constant components with fixed weights. The ETF Efficiente Index may fail to realize gains that could occur as a result of holding assets that have experienced price declines, but after which experience a sudden price spike. As a result, if market conditions do not represent a continuation of prior observed trends, the level of the ETF Efficiente Index, which is rebalanced based on prior trends, may decline. Additionally, even when the closing prices or levels of the Basket Constituents are trending downwards, the ETF Efficiente Index will continue to be composed of the thirteen Basket Constituents. Due to the “long-only” construction of the ETF Efficiente Index, the weight of each Basket Constituent will not fall below zero in respect of each Re-weighting Date even if the relevant Basket Constituent displayed a negative performance over the relevant six month period. No assurance can be given that the investment strategy used to construct the ETF Efficiente Index will outperform any alternative index that might be constructed from the Basket Constituents.

The ETF Efficiente Index may perform poorly during periods characterized by short-term volatility.

The ETF Efficiente Index’s strategy is based on momentum investing. Momentum investing strategies are effective at identifying the current market direction in trending markets. However, in non-trending, sideways markets, momentum investment strategies are subject to “whipsaws.” A whipsaw occurs when the market reverses and does the opposite of what is indicated by the trend indicator, resulting in a trading loss during the particular period. Consequently, the ETF Efficiente Index may perform poorly in non-trending, “choppy” markets characterized by short-term volatility.

The investment strategy used to construct the ETF Efficiente Index involves monthly rebalancing and weighting caps that are applied to the Basket Constituents.

The Basket Constituents are subject to monthly rebalancing and maximum weighting caps by asset type and on subsets of assets. By contrast, a synthetic portfolio that does not rebalance monthly and is not subject to any weighting caps in this manner could see greater compounded gains over time through exposure to a consistently and rapidly appreciating portfolio consisting of the Basket Constituents. Therefore, the return of the ETF Efficiente Index could be different than the return realized on an alternative investment in the Basket Constituents that is not subject to rebalancing and weighting caps. No assurance can be given that the investment strategy used to construct the ETF Efficiente Index will outperform any alternative investment in the Basket Constituents.

The ETF Efficiente Index may be partially uninvested.

The weight of the Cash Constituent at any given time represents the portion of the synthetic portfolio that is uninvested at that time. The ETF Efficiente Index will reflect no return for any uninvested portion (*i.e.*, any portion represented by the Cash Constituent). While the weight of the Cash Constituent is normally limited by a weighting constraint of 50%, if, as a result of an extraordinary event, any Basket Constituent is replaced with the Cash Constituent, the aggregate weight of the Cash Constituent would be allowed to exceed 50% because a portion of such aggregate weight would be subject to the weighting constraints specific to the replaced Basket Constituent and not the weighting constraints specific to the Cash Constituent. See “The Basket Constituents composing the ETF Efficiente Index may be replaced by a substitute ETF or index in certain extraordinary events” below.

The Basket Constituents composing the ETF Efficiente Index may be replaced by a substitute ETF or index in certain extraordinary events.

Following the occurrence of certain extraordinary events with respect to a Basket Constituent as described under “The JPMorgan ETF Efficiente 5 Index — Extraordinary Events,” the affected Basket Constituent may be replaced by a substitute ETF or index. If the index calculation agent determines in its discretion that no suitable substitute ETF or index is available for an affected Basket Constituent (other than the Cash Constituent), then the index calculation agent will replace such Basket Constituent with the Cash Constituent as its substitute. Under such circumstances, the aggregate weight of the Cash Constituent in the ETF Efficiente Index may be greater than the maximum 50% weight limit allocated for the Cash Constituent because a portion of such aggregate weight would be subject to the separate maximum weight limit specific to the affected Basket Constituent. The changing of a Basket Constituent may affect the performance of the ETF Efficiente Index as the replacement Basket Constituent may perform significantly better or worse than the affected Basket Constituent.

Any of the ETF Constituents may be replaced by an index under extraordinary circumstances, in which case the risks relating to indices will affect the level of the ETF Efficient Index.

Under certain extraordinary circumstances, any ETF Constituent may be replaced by a substitute index that possesses substantially similar characteristics or provides a substantially similar exposure as the ETF Constituent being replaced, as determined by the index calculation agent in its discretion. Exposure to the ETF Efficient Index shall confer none of the rights that holders of the assets underlying a substitute index would have such as, if applicable, voting rights or rights to dividends or other distributions. If the substitute index is an equity index that is not a total return index, the value of the substitute index will not reflect dividends on the equity securities included in such equity index.

Moreover, the policies of the sponsor of the substitute index concerning the methodology and calculation of the substitute index, including decisions regarding additions, deletions or substitutions of the assets underlying the substitute index could affect the level of the Successor Index. The returns of the ETF Efficient Index could also be affected if the sponsor of the substitute index discontinues or suspends calculation or dissemination of the substitute index. The index sponsor of the substitute index will have no obligation to consider any person's interests in calculating or revising such substitute index.

If the assets underlying a substitute index have been issued by non-U.S. companies or non-U.S. governments, the level of the substitute index will be affected by political, economic, financial and social factors in the relevant countries, including changes in a relevant country's government, economic and fiscal policies, currency exchange laws and other foreign laws or restrictions.

Correlation of performances among the Basket Constituents may reduce the performance of the ETF Efficient Index.

Performances of the Basket Constituents may become highly correlated from time to time, including, but not limited to, a period in which there is a substantial decline in a particular sector or asset type represented by the Basket Constituents and which has a higher weighting in the ETF Efficient Index relative to any of the other sectors or asset types, as determined by the ETF Efficient Index's strategy. High correlation during periods of negative returns among Basket Constituents representing any one sector or asset type and which Basket Constituents have a substantial percentage weighting in the ETF Efficient Index could have an adverse effect on the ETF Efficient Index.

Changes in the value of the Basket Constituents may offset each other.

Because the ETF Efficient Index is linked to the performance of the Basket Constituents, which collectively represent a diverse range of asset classes and geographic regions, price movements between the Basket Constituents representing different asset classes or geographic regions may not correlate with each other. At a time when the value of a Basket Constituent representing a particular asset class or geographic region increases, the value of other Basket Constituents representing a different asset class or geographic region may not increase as much or may decline. Therefore, in calculating the level of the ETF Efficient Index, increases in the value of some of the Basket Constituents may be moderated, or more than offset, by lesser increases or declines in the level of other Basket Constituents.

Risks Relating to the Equity/Bond ETF Constituents

Currency exchange risk.

Because the prices of some or all of the securities composing two of the thirteen Basket Constituents (the iShares[®] MSCI EAFE Index Fund and the iShares[®] MSCI Emerging Markets Index Fund) (the "**Component Securities**") are converted into U.S. dollars for the purposes of calculating the value of the relevant Basket Constituents, there is currency exchange rate risk with respect to each of the relevant currencies. An investor's net exposure will depend on the extent to which such currencies strengthen or weaken against the U.S. dollar and the weight of the Component Securities in the relevant Basket Constituents denominated in each such currency. If, taking into account such weighting, the U.S. dollar strengthens against those currencies, the value of the relevant Basket Constituents will be adversely affected.

Of particular importance to potential currency exchange risk are:

- existing and expected rates of inflation;
- existing and expected interest rate levels;
- the balance of payments;
- political, civil or military unrest; and
- the extent of governmental surpluses or deficits in the relevant countries and the United States.

All of these factors are, in turn, sensitive to the monetary, fiscal and trade policies pursued by the governments of various countries, the United States and other countries important to international trade and finance.

If the prices of the equity securities held by an ETF Constituent holding primarily foreign equity securities (a “foreign ETF Constituent”) are not converted into U.S. dollars for purposes of calculating the net asset value of that foreign ETF Constituent, the performance of the ETF Efficient Index will not be adjusted for changes in exchange rates that might affect that foreign ETF Constituent.

Because the prices of the equity securities held by a foreign ETF Constituent are not converted into U.S. dollars for purposes of calculating the net asset value of that foreign ETF Constituent and although the equity securities held by that foreign ETF Constituent are traded in currencies other than U.S. dollars, and the ETF Efficient Index, which is linked in part to that foreign ETF Constituent, are denominated in U.S. dollars, the return of the ETF Efficient Index will not be adjusted for changes in the exchange rate between the U.S. dollar and each of the currencies in which the equity securities held by that foreign ETF Constituent are denominated. Changes in exchange rates, however, may reflect changes in various non-U.S. economies that in turn may affect the return of the ETF Efficient Index.

Changes in the volatility of exchange rates, and the correlation between those rates and the prices of the iShares[®] MSCI EAFE Index Fund and the iShares[®] MSCI Emerging Markets Index Fund are likely to affect the performance of the ETF Efficient Index.

The exchange rate between the U.S. dollar and each of the currencies in which the Component Securities are denominated refers to a foreign exchange spot rate that measures the relative values of two currencies – the particular currency in which a Component Security is denominated and the U.S. dollar. This exchange rate reflects the amount of the particular currency in which a Component Security is denominated that can be purchased for one U.S. dollar and thus increases when the U.S. dollar appreciates relative to the particular currency in which a Component Security is denominated. The volatility of the exchange rate between the U.S. dollar and each of the currencies in which the Component Securities are denominated refers to the size and frequency of changes in that exchange rate.

Because the iShares[®] MSCI EAFE Index Fund and the iShares[®] MSCI Emerging Markets Index Fund are calculated, in part, by converting the closing prices of the Component Securities into U.S. dollars, the volatility of the exchange rate between the U.S. dollar and each of the currencies in which the Component Securities are denominated could affect the return of the ETF Efficient Index.

The correlation of the exchange rate between the U.S. dollar and each of the currencies in which the Component Securities are denominated and the value of the relevant Basket Constituent refer to the relationship between the percentage changes in that exchange rate and the percentage changes in the net asset value of that Basket Constituent. The direction of the correlation (whether positive or negative) and the extent of the correlation between the percentage changes in the exchange rate between the U.S. dollar and each of the currencies in which the Component Securities are denominated and the percentage changes in the net asset value of that Basket Constituent could affect the ETF Efficient Index.

There are risks associated with non-U.S. securities markets, including emerging markets.

Some or all of the equity securities that are held by the iShares[®] MSCI EAFE Index Fund and the iShares[®] MSCI Emerging Markets Index Fund, two of the Basket Constituents, have been issued by non-U.S. issuers. In addition, the iShares[®] iBoxx \$ Investment Grade Corporate Bond Fund and the iShares[®] iBoxx \$ High Yield Corporate Bond Fund, which are also Basket Constituents, may include U.S. dollar-denominated bonds of foreign corporations. Investments in securities linked to the value of non-U.S. securities involve risks associated with the securities markets in those countries, including risks of volatility in those markets, governmental intervention in those markets and cross

shareholdings in companies in certain countries. Also, there is generally less publicly available information about companies in some of these jurisdictions than about U.S. companies that are subject to the reporting requirements of the Securities and Exchange Commission (the “SEC”), and generally non-U.S. companies are subject to accounting, auditing and financial reporting standards and requirements and securities trading rules different from those applicable to U.S. reporting companies.

Moreover, the bonds held by the iShares® JPMorgan USD Emerging Markets Bond Fund have been issued by 33 countries. The returns of the ETF Efficient Index, which are linked in part to the economic stability and development of such countries, involve risks associated with investments in, or the securities markets in, those countries.

The prices of equity securities and government bonds in non-U.S. markets may be affected by political, economic, financial and social factors in such markets, including changes in a country’s government, economic and fiscal policies, currency exchange laws or other laws or restrictions. Moreover, the economies of these countries may differ favorably or unfavorably from the economy of the United States in such respects as growth of gross national product, rate of inflation, capital reinvestment, resources and self-sufficiency. These countries may be subjected to different and, in some cases, more adverse economic environments.

The economies of emerging market countries in particular face several concerns, including relatively unstable governments that may present the risks of nationalization of businesses, restrictions on foreign ownership and prohibitions on the repatriation of assets, and which may have less protection of property rights than more developed countries. These economies may also be based on only a few industries, be highly vulnerable to changes in local and global trade conditions and may suffer from extreme and volatile debt burdens or inflation rates. In addition, local securities markets may trade a small number of securities and may be unable to respond effectively to increases in trading volume, potentially making prompt liquidation of holdings difficult or impossible at times.

Some or all of these factors may influence the value of the relevant Basket Constituents, and therefore, the ETF Efficient Index. The impact of any of the factors set forth above may enhance or offset some or all of any change resulting from another factor or factors. You cannot predict the future performance of such Basket Constituents based on their historical performance. The value of any such Basket Constituents may decrease, resulting in a decrease in the level of the ETF Efficient Index.

There are significant risks associated with fixed-income securities, including interest rate-related risks.

Five of the Basket Constituents (the iShares® Barclays 20+ Year Treasury Bond Fund, the iShares® iBoxx \$ Investment Grade Corporate Bond Fund, the iShares® iBoxx \$ High Yield Corporate Bond Fund, the iShares® Emerging Markets Bond Fund and the iShares® Barclays TIPS Bond Fund, which we collectively refer to as the “**Bond ETFs**”) are bond ETFs that attempt to track the performance of indices composed of fixed income securities. These Basket Constituents differs significantly from investing directly in bonds to be held to maturity as the values of the Bond ETFs change, at times significantly, during each trading day based upon the current market prices of their underlying bonds. The market prices of these bonds are volatile and significantly influenced by a number of factors, particularly the yields on these bonds as compared to current market interest rates and the actual or perceived credit quality of the issuer of these bonds. The market prices of the bonds underlying each of the iShares® iBoxx \$ Investment Grade Corporate Bond Fund and the iShares® iBoxx \$ High Yield Corporate Bond Fund are determined by reference to the bid and ask quotations provided by 9 contributing banks, one of which is J.P. Morgan Chase & Co. JPMS is also the sponsor of the JPMorgan EMBI Global Core Index, which is the index underlying the iShares® JPMorgan USD Emerging Markets Bond Fund. JPMS may, as a last resort, if there are no valid prices available for instruments included in the JPMorgan EMBI Global Core Index, price such instruments by asking JPMS traders to provide a market bid and ask.

In general, fixed-income securities are significantly affected by changes in current market interest rates. As interest rates rise, the price of fixed-income securities, including those underlying the Bond ETFs, is likely to decrease. Securities with longer durations tend to be more sensitive to interest rate changes, usually making them more volatile than securities with shorter durations. The eligibility criteria for the securities included in the indices that underlie the Bond ETFs, which each mandate that each security must have a minimum term remaining to maturity (ranging from one year to 20 years) for continued eligibility, means that, at any time, only longer-term securities underlie the Bond ETFs, which thereby increases the risk of price volatility in the underlying securities and, consequently, the volatility in the

value of the ETF Efficient Index. As a result, rising interest rates may cause the value of the bonds underlying the Bond ETFs, the Bond ETFs and the ETF Efficient Index to decline, possibly significantly.

Interest rates are subject to volatility due to a variety of factors, including:

- sentiment regarding underlying strength in the U.S. economy and global economies;
- expectations regarding the level of price inflation;
- sentiment regarding credit quality in the U.S. and global credit markets;
- central bank policies regarding interest rates; and
- the performance of U.S. and foreign capital markets.

Recently, U.S. treasury notes have been trading near their historic high trading price. If the price of the U.S. treasury notes reverts to its historic mean or otherwise falls, as a result of a general increase in interest rates or perceptions of reduced credit quality of the U.S. government or otherwise, the value of the bonds underlying the iShares® Barclays 20+ Year Treasury Bond Fund will decline, which could have a negative impact on the performance of the ETF Efficient Index.

In addition, the iShares® Barclays TIPS Bond Fund includes inflation-protected bonds, which typically have lower yields than conventional fixed-rate bonds because of their inflation adjustment feature. For the iShares® Barclays TIPS Bond Fund, if inflation is low, the benefit received from the inflation-protected feature of the underlying bonds may not sufficiently compensate for this reduced yield.

There are significant risks associated with fixed-income securities, including credit risk.

The prices of the underlying bonds are significantly influenced by the creditworthiness of the issuers of the bonds. The bonds underlying the Bond ETFs may have their credit ratings downgraded, including in the case of the bonds included in the iShares® iBoxx \$ Investment Grade Corporate Bond Fund, a downgrade from investment grade to non-investment grade status, or have their credit spreads widen significantly. Following a ratings downgrade or the widening of credit spreads, some or all of the underlying bonds may suffer significant and rapid price declines. These events may affect only a few or a large number of the underlying bonds. For example, during the recent credit crisis in the United States, credit spreads widened significantly as the market demanded very high yields on corporate bonds and, as a result, the prices of the bonds underlying the Bond ETFs dropped significantly. There can be no assurance that some or all of the factors that contributed to this credit crisis will not continue or return, and, consequently, depress the price, perhaps significantly, of the underlying bonds and therefore the value of the Bond ETFs and the ETF Efficient Index.

Further, the iShares® iBoxx \$ High Yield Corporate Bond Fund is designed to provide a representation of the U.S. dollar high yield corporate market and is therefore subject to high yield securities risk, being the risk that securities that are rated below investment grade (commonly known as “junk bonds,” including those bonds rated at BB+ or lower by S&P or Fitch or Ba1 by Moody’s) may be more volatile than higher-rated securities of similar maturity. High yield securities may also be subject to greater levels of credit or default risk than higher-rated securities. The value of high yield securities can be adversely affected by overall economic conditions, such as an economic downturn or a period of rising interest rates, and high yield securities may be less liquid and more difficult to sell at an advantageous time or price or to value than higher-rated securities. In particular, high yield securities are often issued by smaller, less creditworthy companies or by highly leveraged (indebted) firms, which are generally less able than more financially stable firms to make scheduled payments of interest and principal.

There are risks associated with small capitalization stocks.

The stocks that constitute the Russell 2000® Index and that are held by the iShares® Russell 2000 Index Fund are issued by companies with relatively small market capitalization. The stock prices of smaller companies may be more volatile than stock prices of large capitalization companies. Small capitalization companies may be less able to withstand adverse economic, market, trade and competitive conditions relative to larger companies. These companies tend to be less well-established than large market capitalization companies. Small capitalization companies are less

likely to pay dividends on their stocks, and the presence of a dividend payment could be a factor that limits downward stock price pressure under adverse market conditions.

There are risks associated with the real estate industry that will affect the price of shares of the iShares® Dow Jones Real Estate Index Fund Constituent .

The real estate industry is cyclical and has from time to time experienced significant difficulties. The prices of the securities included in the Dow Jones U.S. Real Estate Index and held by the iShares® Dow Jones Real Estate Index Fund and, in turn, the level of the Dow Jones U.S. Real Estate Index and the price of shares of the iShares® Dow Jones Real Estate Index Fund, as applicable, will be affected by a number of factors that may either offset or magnify each other, including:

- employment levels and job growth;
- the availability of financing for real estate;
- interest rates;
- consumer confidence;
- the availability of suitable undeveloped land;
- federal, state and local laws and regulations concerning the development of land, construction, home and commercial real estate sales, financing and environmental protection; and
- competition among companies that engage in the real estate business.

The difficulties described above could cause a downturn in the real estate industry generally or regionally and could cause the value of the securities included in the Dow Jones U.S. Real Estate Index and held by the iShares® Dow Jones Real Estate Index Fund and the level of the Dow Jones U.S. Real Estate Index and the price of shares of the iShares® Dow Jones Real Estate Index Fund, as applicable, to decline or remain flat.

There are risks associated with Real Estate Investment Trusts.

The Dow Jones U.S. Real Estate Index and the iShares® Dow Jones Real Estate Index Fund are composed of a variety of real-estate-related stocks including real estate investment trusts (“REITs”). REITs invest primarily in income-producing real estate or real-estate-related loans or interests. Investments in REITs, though not direct investments in real estate, are still subject to the risks associated with investing in real estate. The following are some of the conditions that might impact the structure of and cash flow generated by REITs and, consequently, the value of REITs and, in turn, the Dow Jones U.S. Real Estate Index and the iShares® Dow Jones Real Estate Index Fund:

- a decline in the value of real estate properties;
- extended vacancies of properties;
- increases in property and operating taxes;
- increased competition or overbuilding;
- a lack of available mortgage funds or other limits on accessing capital;
- tenant bankruptcies and other credit problems;
- limitation on rents, including decreases in market rates for rents;
- changes in zoning laws and governmental regulations;
- costs resulting from the clean-up of, and legal liability to third parties for, damages resulting from environmental problems;
- investments in developments that are not completed or that are subject to delays in completion;
- risks associated with borrowing;
- changes in interest rates;

- casualty and condemnation losses; and
- uninsured damages from floods, earthquakes or other natural disasters.

The factors above may either offset or magnify each other. To the extent that any of these conditions occur, they may negatively impact a REIT's cash flow and cause a decline in the share price of a REIT, and, consequently, the level of the Dow Jones U.S. Real Estate Index and the price of shares of the iShares[®] Dow Jones Real Estate Index Fund. In addition, some REITs have relatively small market capitalizations, which can increase the volatility of the market price of securities issued by those REITs. Furthermore, REITs are dependent upon specialized management skills, have limited diversification and are, as a result, subject to risks inherent in operating and financing a limited number of projects. To the extent that such risks increase the volatility of the market price of securities issued by REITs, they may also, consequently, increase the volatility of the Dow Jones U.S. Real Estate Index and the iShares[®] Dow Jones Real Estate Index Fund.

There will be no direct correlation between the price of the iShares[®] Dow Jones Real Estate Index Fund and residential housing prices.

There is no direct linkage between the price of shares of the iShares[®] Dow Jones Real Estate Index Fund and residential housing prices in specific regions or residential housing prices in general. While residential housing prices may be one factor that could affect the prices of the securities held by the Real Estate Constituent and consequently the price of shares of the iShares[®] Dow Jones Real Estate Index Fund and the price of shares of the iShares[®] Dow Jones Real Estate Index Fund are not directly linked to movements of residential housing prices and may be affected by factors unrelated to such movements.

There are risks associated with the Equity/Bond ETF Constituents.

The Equity/Bond ETF Constituents may have a limited operating history. Although the Equity/Bond ETF Constituents are listed for trading and a number of similar products have been traded on the same and other securities exchanges for varying periods of time, there is no assurance that an active trading market will continue for the ETF Constituents or that there will be liquidity in the trading market.

In addition, the Equity/Bond ETF Constituents are subject to management risk, which is the risk that the applicable investment adviser's investment strategy, the implementation of which is subject to a number of constraints, may not produce the intended results. These constraints could adversely affect the market prices of the shares of the Equity/Bond ETF Constituents, and consequently, the performance of the ETF Efficient Index. See the relevant Basket Constituent description below for additional information.

The policies of the investment adviser for an ETF Constituent, and the sponsor of a Reference Index, could affect the value and the amount payable on the securities.

The policies of the investment adviser for an ETF Constituent concerning the calculation of the ETF Constituent's net asset value, additions, deletions or substitutions of securities, commodities, commodity futures contracts or other assets underlying the ETF Constituent and manner in which changes affecting the Reference Index of the ETF Constituent are reflected in the ETF Constituent could affect the market price of shares of the ETF Constituent and, therefore, affect the performance of the ETF Efficient Index. The performance of the ETF Efficient Index could also be affected if the investment adviser changes these policies, for example, by changing the manner in which it calculates the ETF Constituent's net asset value, or if the investment adviser discontinues or suspends calculation or publication of the ETF Constituent's net asset value.

In addition, the sponsor of the index underlying an ETF Constituent, which we refer to as the Reference Index, is responsible for the design and maintenance of such Reference Index. The policies of the sponsor concerning the calculation of the Reference Index, including decisions regarding the addition, deletion or substitution of the equity securities included in the Reference Index, could affect the value of the Reference Index and, consequently, could affect the market prices of the ETF Constituent and, therefore, the performance of the ETF Efficient Index.

The performance of each Equity/Bond ETF Constituent may not correlate with the performance of its Reference Index.

Each Equity/Bond ETF Constituent (other than the SPDR[®] S&P 500[®] ETF Trust) uses a representative sampling indexing strategy to attempt to track the performance of its Reference Index. Pursuant to such representative sampling indexing strategy, each Equity/Bond ETF Constituent (other than the SPDR[®] S&P 500[®] ETF Trust) invests in a representative sample of securities that collectively has an investment profile similar to its Reference Index; however, each Equity/Bond ETF Constituent (other than the SPDR[®] S&P 500[®] ETF Trust) may not hold all or substantially all of the securities included in its Reference Index. Therefore, while the performance of each Equity/Bond ETF Constituent (other than the SPDR[®] S&P 500[®] ETF Trust) is linked principally to the performance of its Reference Index, the performance of each Equity/Bond ETF Constituent (other than the SPDR[®] S&P 500[®] ETF Trust) is also generally linked in part to assets other than the securities included in the Reference Index because the investment adviser to each Equity/Bond ETF Constituent (other than the SPDR[®] S&P 500[®] ETF Trust), BlackRock Fund Advisors (“BFA”), generally may invest up to a certain percentage of the Equity/Bond ETF Constituent’s assets in securities not included in the Reference Index, but which BFA believes will help the Equity/Bond ETF Constituent track the Reference Index, and in other assets, including shares of money market funds affiliated with or advised by BFA.

In addition, the performance of each Equity/Bond ETF Constituent (including the SPDR[®] S&P 500[®] ETF Trust) will reflect additional transaction costs and fees that are not included in the calculation of the relevant Reference Index. Also, the component stocks of each Equity/Bond ETF Constituent (including the SPDR[®] S&P 500[®] ETF Trust), if applicable, may be unavailable in the secondary market or due to other extraordinary circumstances. Corporate actions with respect to the sample of securities (such as mergers and spin-offs) also may impact the variance between each Equity/Bond ETF Constituent (including the SPDR[®] S&P 500[®] ETF Trust) and its Reference Index. Finally, because the shares of each Equity/Bond ETF Constituent (including the SPDR[®] S&P 500[®] ETF Trust) are traded on the NYSE Arca, Inc. and are subject to market supply and investor demand, the market value of one share of each Equity/Bond ETF Constituent may differ from the net asset value per share of the each such Equity/Bond ETF Constituent.

For all of the foregoing reasons, the performance of each Equity/Bond ETF Constituent (including the SPDR[®] S&P 500[®] ETF Trust) may not correlate with the performance of the relevant Reference Index. Consequently, the return of the ETF Efficient Index will not be the same as investing directly in any Equity/Bond ETF Constituent or any relevant Reference Index or in the securities held by any Equity/Bond ETF Constituent or included in any relevant Reference Index, and will not be the same as investing in a financial product with a payment linked to the performance of the relevant Reference Index.

Risks Relating to the Commodity ETF Constituents

There are risks of suspension or disruptions of market trading in the relevant commodity and related futures markets.

The commodity markets are subject to temporary distortions or other disruptions due to various factors, including the lack of liquidity in the markets, the participation of speculators and government regulation and intervention. In addition, U.S. futures exchanges and some foreign exchanges have regulations that limit the amount of fluctuation in futures contract prices that may occur during a single day. These limits are generally referred to as “daily price fluctuation limits” and the maximum or minimum price of a contract on any given day as a result of these limits is referred to as a “limit price.” Once the limit price has been reached for a particular contract, no trades may be made at a different price. Limit prices have the effect of precluding trading in a particular contract or forcing the liquidation of contracts at disadvantageous times or prices. These circumstances could adversely affect the price of shares of the iShares[®] S&P GSCI[™] Commodity-Indexed Trust and the SPDR[®] Gold Trust and therefore, the level of the ETF Efficient Index.

There is no regulation by the Commodity Futures Trading Commission.

The ETF Efficient Index neither constitutes an investment in futures contracts, options on futures contracts nor a collective investment vehicle that trades in these futures contracts and therefore the ETF Efficient Index as well as its calculation, publication and licensing will not be subject to the regulatory protections of the Commodity Futures Trading Commission, commonly referred to as the “CFTC.” The ETF Efficient Index does not provide the benefit of

the CFTC or any other non-U.S. regulatory authority's regulatory protections afforded to persons who trade in futures contracts on a regulated futures exchange through a registered futures commission merchant.

Unlike the ETF Efficient Index, an investment in a collective investment vehicle that invests in futures contracts on behalf of its participants may be subject to regulation as a commodity pool and its operator may be required to be registered with and regulated by the CFTC as a commodity pool operator, or qualify for an exemption from the registration requirement. Because the ETF Efficient Index is not and does not constitute an investment in interests in a commodity pool, the ETF Efficient Index will not be regulated by the CFTC as a commodity pool, the ETF Efficient Index, its sponsor and calculation agent will not be registered with the CFTC as a commodity pool operator, and the ETF Efficient Index itself will not afford anyone the benefit of the CFTC's or any non U.S. regulatory authority's regulatory protections afforded to persons who otherwise invest in regulated commodity pools.

The commodity futures contracts underlying the iShares[®] S&P GSCI[™] Commodity-Indexed Trust or related to gold underlying the SPDR[®] Gold Trust are subject to legal and regulatory regimes that may have an adverse effect on the level of the ETF Efficient Index and/or could lead to a commodity hedging disruption event and its attendant consequences.

Futures contracts and options on futures contracts markets, including the futures contracts underlying the iShares[®] S&P GSCI[™] Commodity-Indexed Trust or related to gold underlying the SPDR[®] Gold Trust, are subject to extensive regulation and margin requirements. The CFTC and the exchanges on which such futures contracts trade, are authorized to take extraordinary actions in the event of a market emergency, including, for example, the retroactive implementation of speculative position limits or higher margin requirements, the establishment of daily limits and the suspension of trading. Furthermore, certain exchanges have regulations that limit the amount of fluctuations in futures contract prices that may occur during a single five-minute trading period. These limits could adversely affect the market prices of relevant futures contracts and forward contracts. The regulation of commodity transactions in the U.S. is subject to ongoing modification by government and judicial action. In addition, various non-U.S. governments have expressed concern regarding the disruptive effects of speculative trading in the commodity markets and the need to regulate the derivative markets in general. The effect on the performance of the ETF Efficient Index of any future regulatory change is impossible to predict, but could be substantial and adverse.

Notably, with respect to agricultural and exempt commodities as defined in the Commodity Exchange Act (generally, physical commodities such as agricultural commodities, energy commodities and metals), the Dodd-Frank Act, which was enacted on July 21, 2010, requires the CFTC to establish limits on the amount of positions, other than bona fide hedge positions, that may be held by any person in futures contracts, options on futures contracts and other related derivatives such as swaps that are economically equivalent to those contracts. The Dodd-Frank Act also requires the CFTC to establish limits for each month, including related hedge exemption positions, on the aggregate number or amount of positions in contracts based upon the same underlying commodity, as defined by the CFTC, that may be held by any person, including any group or class of traders. In addition, designated contract markets and swap execution facilities, as defined in the Dodd-Frank Act, are required to establish and enforce position limits or position accountability requirements on their own markets or facilities, which must be at least as stringent as the CFTC's where CFTC limits also apply.

Pursuant to the Dodd-Frank Act requirements, on October 18, 2011 the CFTC adopted final rules to establish position limits that will apply to any one of 28 futures and options contracts and that are traded on U.S. futures exchanges and to futures, options and swaps that are economically equivalent to those contracts, as described in the rules. The limits will apply to a person's combined position across those related products. The limits cover a number of commodity futures contracts that may be included in the iShares[®] S&P GSCI[™] Commodity-Indexed Trust, such as CBOT Soybeans, Soybean Meal and Wheat futures; ICE Futures US Cotton No. 2, Sugar No. 11 and Sugar No. 16 futures; NYMEX Light Sweet Crude Oil, NY Harbor No. 2 Heating Oil, NY Harbor Gasoline Blendstock and Henry Hub Natural Gas futures; and COMEX Gold, Silver and Copper futures and NYMEX Palladium and Platinum futures. The rules also narrow the existing exemption for hedge positions.

Commodity futures prices may change unpredictably, affecting the price of shares of the iShares[®] S&P GSCI[™] Commodity-Indexed Trust and the ETF Efficient Index.

Trading in commodity futures contracts underlying the iShares[®] S&P GSCI[™] Commodity-Indexed Trust is speculative and can be extremely volatile. A decrease in the price of any of the commodities upon which the futures

contracts that compose the iShares[®] S&P GSCI[™] Commodity-Indexed Trust are based may have a material adverse effect on the ETF Efficient Index. Market prices of the commodities on which the futures contracts that compose the iShares[®] S&P GSCI[™] Commodity-Indexed Trust are based may fluctuate rapidly based on numerous factors, including: changes in supply and demand relationships; governmental programs and policies, national and international monetary, trade, political and economic events, wars and acts of terror, changes in interest and in exchange rates, speculation and trading activities in commodities and related contracts, weather, and agricultural, trade, fiscal and exchange control policies. The price volatility of each commodity also affects the value of the futures and forward contracts related to that commodity and therefore its price at any such time. The price of any one commodity may be correlated to a greater or lesser degree with any other commodity and factors affecting the general supply and demand as well as the prices of other commodities may affect the particular commodity in question. In respect of commodities in the energy sector, due to the significant level of its continuous consumption, limited reserves, and oil cartel controls, energy prices are subject to rapid price increases in the event of perceived or actual shortages. The commodities markets are subject to temporary distortions or other disruptions due to various factors, including the lack of liquidity in the markets, the participation of speculators and government regulation and intervention. Many commodities are also highly cyclical. These factors, some of which are specific to the nature of each such commodity, may cause the value of the different commodities upon which the futures contracts that compose the iShares[®] S&P GSCI[™] Commodity-Indexed Trust are based, as well as the futures contracts themselves, to move in inconsistent directions at inconsistent rates. This, in turn, will affect the value of shares of the iShares[®] S&P GSCI[™] Commodity-Indexed Trust and the ETF Efficient Index. It is not possible to predict the aggregate effect of all or any combination of these factors.

Some of the commodities underlying the iShares[®] S&P GSCI[™] Commodity-Indexed Trust will be subject to pronounced risks of pricing volatility.

As a general matter, the risk of low liquidity or volatile pricing around the maturity date of a commodity futures contract is greater than in the case of other futures contracts because (among other factors) a number of market participants take physical delivery of the underlying commodities. Many commodities, like those in the energy and industrial metals sectors, have liquid futures contracts that expire every month. Therefore, in the calculation of the iShares[®] S&P GSCI[™] Commodity-Indexed Trust these contracts are rolled forward every month. Contracts based on certain other commodities, most notably agricultural and livestock products, tend to have only a few contract months each year that trade with substantial liquidity. Thus, these commodities, with related futures contracts that expire infrequently, roll forward less frequently than every month in the calculation of the iShares[®] S&P GSCI[™] Commodity-Indexed Trust, and can have further pronounced pricing volatility during extended periods of low liquidity. The risk of aberrational liquidity or pricing around the maturity date of a commodity futures contract is greater than in the case of other futures contracts because (among other factors) a number of market participants take delivery of the underlying commodities. Due to the significant level of continuous consumption, limited reserves, and oil cartel controls, energy commodities are subject to rapid price increases in the event of perceived or actual shortages. These factors (when combined or in isolation) may affect the price of futures contracts and, as a consequence, the level of the ETF Efficient Index.

The iShares[®] S&P GSCI[™] Commodity-Indexed Trust does not offer direct exposure to commodity spot prices.

The value of the iShares[®] S&P GSCI[™] Commodity-Indexed Trust is intended to track generally the performance of commodity-futures contracts on physical commodities included in the S&P GSCI[™] Index, not physical commodities (or their spot prices). The price of a futures contract reflects the expected value of the commodity upon delivery in the future, whereas the spot price of a commodity reflects the immediate delivery value of the commodity. A variety of factors can lead to a disparity between the expected future price of a commodity and the spot price at a given point in time, such as the cost of storing the commodity for the term of the futures contract, interest charges incurred to finance the purchase of the commodity and expectations concerning supply and demand for the commodity. The price movements of a futures contract are typically correlated with the movements of the spot price of the reference commodity, but the correlation is generally imperfect and price movements in the spot market may not be reflected in the futures market (and vice versa). Accordingly, the ETF Efficient Index may underperform a similar investment strategy that reflects the return on physical commodities.

Higher future prices of the commodity futures contracts constituting the iShares® S&P GSCI™ Commodity-Indexed Trust relative to their current prices may decrease the amount payable at maturity.

The iShares® S&P GSCI™ Commodity-Indexed Trust is composed of futures contracts on physical commodities. Unlike equities, which typically entitle the holder to a continuing stake in a corporation, commodity futures contracts normally specify a certain date for delivery of the underlying physical commodity. As the exchange-traded futures contracts that compose the iShares® S&P GSCI™ Commodity-Indexed Trust approach expiration, they are replaced by contracts that have a later expiration. For example, a contract purchased and held in August may specify an October expiration. As time passes, the contract expiring in October is replaced by a contract for delivery in November. This is accomplished by selling the October contract and purchasing the November contract. This process is referred to as “rolling.” Excluding other considerations, if the market for these contracts is in “contango,” where the prices are higher in the distant delivery months than in the nearer delivery months, the purchase of the November contract would take place at a price that is higher than the price of the October contract, thereby creating a *negative* “roll yield.” Moreover, many commodities have historically exhibited contango markets. The presence of contango in the commodity markets could adversely affect the price of shares of the iShares® S&P GSCI™ Commodity-Indexed Trust and, therefore, the level of the ETF Efficient Index.

An increase in the margin requirements for commodity futures contracts included in the iShares® S&P GSCI™ Commodity-Indexed Trust may adversely affect the level of the ETF Efficient Index.

Futures exchanges require market participants to post collateral in order to open and to keep open positions in futures contracts. If an exchange increases the amount of collateral required to be posted to hold positions in commodity futures contracts underlying the iShares® S&P GSCI™ Commodity-Indexed Trust, market participants who are unwilling or unable to post additional collateral may liquidate their positions, which may cause the price of the relevant commodity futures contracts to decline significantly. As a result, the level of the ETF Efficient Index may be adversely affected.

The price of gold is volatile and is affected by numerous factors.

The value of the SPDR® Gold Trust is closely related to the price of gold. A decrease in the price of gold may have a material adverse effect on the ETF Efficient Index. Gold is subject to the effect of numerous factors. The following describes some of the factors affecting gold.

The price of gold is primarily affected by the global demand for and supply of gold. The market for gold bullion is global, and gold prices are subject to volatile price movements over short periods of time and are affected by numerous factors, including macroeconomic factors such as the structure of and confidence in the global monetary system, expectations regarding the future rate of inflation, the relative strength of, and confidence in, the U.S. dollar (the currency in which the price of gold is usually quoted), interest rates, gold borrowing and lending rates, and global or regional economic, financial, political, regulatory, judicial or other events. Gold prices may be affected by industry factors such as industrial and jewelry demand as well as lending, sales and purchases of gold by the official sector, including central banks and other governmental agencies and multilateral institutions that hold gold. Additionally, gold prices may be affected by levels of gold production, production costs and short-term changes in supply and demand due to trading activities in the gold market. It is not possible to predict the aggregate effect of all or any combination of these factors.

Economic or political events or crises could result in large-scale purchases or sales of gold, which could affect the price of gold and may adversely affect the ETF Efficient Index.

Many investors, institutions, governments and others purchase and sell gold as a hedge against inflation, market turmoil or uncertainty or political events. Under such circumstances, significant large-scale purchases or sales of gold by market participants may affect the price of gold, which could adversely affect the ETF Efficient Index. Crises in the future may impair gold’s price performance which would, in turn, adversely affect the shares of the SPDR® Gold Trust and the performance of the ETF Efficient Index.

Substantial sales of gold by governments or public sector entities could result in price decreases, which would adversely affect the ETF Efficient Index.

Governments and other public sector entities, such as agencies of governments and multi-national institutions, regularly buy, sell and hold gold as part of the management of their reserves. In the event that economic, political or social conditions or pressures require or motivate public sector entities to sell gold, in a coordinated or uncoordinated manner, the resulting purchases could cause the price of gold to decrease substantially, which could adversely affect the ETF Efficient Index.

Gold is traded on the London Bullion Market Association and there are risks associated with the London Bullion Market Association.

The ETF Efficient Index is linked to the SPDR[®] Gold Trust, which is closely related to its underlying commodity (e.g., gold) that is traded on the London Bullion Market Association (the “LBMA”). Investments in securities indexed to the value of commodities that are traded on non-U.S. exchanges involve risks associated with the markets in those countries, including risks of volatility in those markets and governmental intervention in those markets.

The final price of gold will be determined by reference to fixing prices reported by the LBMA. The LBMA is a self-regulatory association of bullion market participants. Although all market-making members of the LBMA are supervised by the Bank of England and are required to satisfy a capital adequacy test, the LBMA itself is not a regulated entity. If the LBMA should cease operations, or if bullion trading should become subject to a value added tax or other tax or any other form of regulation currently not in place, the role of LBMA price fixings as a global benchmark for the value of gold may be adversely affected. The LBMA is a principals’ market which operates in a manner more closely analogous to an over-the-counter physical commodity market than regulated futures markets, and certain features of U.S. futures contracts are not present in the context of LBMA trading. For example, there are no daily price limits on the LBMA which would otherwise restrict fluctuations in the prices of LBMA contracts. In a declining market, it is possible that prices would continue to decline without limitation within a trading day or over a period of trading days.

The relevant exchange for gold has no obligation to consider anyone’s interests.

The price of the SPDR[®] Gold Trust is closely related to the price of gold. The relevant exchange for gold is responsible for calculating the official settlement price or fixing level, as applicable, for gold. The relevant exchange may alter, discontinue or suspend calculation or dissemination of the official settlement price or fixing level, as applicable, for gold. Any of these actions could adversely affect the ETF Efficient Index. The relevant exchange has no obligation to consider anyone’s interests in calculating or revising the official settlement price or fixing level, as applicable, for gold.

Termination of the SPDR[®] Gold Trust could affect adversely the ETF Efficient Index.

The SPDR[®] Gold Trust may be required to terminate and liquidate. If the SPDR[®] Gold Trust is required to terminate and liquidate, such termination and liquidation could occur at a time that is disadvantageous

There are risks associated with the Commodity ETF Constituents.

The Commodity ETF Constituents may have a limited operating history. Although the Commodity ETF Constituents are listed for trading and a number of similar products have been traded on the same and other securities exchanges for varying periods of time, there is no assurance that an active trading market will continue for the Commodity ETF Constituents or that there will be liquidity in the trading market.

The policies of the sponsors of the Commodity ETF Constituents and changes that affect the Commodity ETF Constituents could affect the net asset value of the Commodity ETF Constituents.

The policies of the sponsors of the Commodity ETF Constituents concerning the net asset value of the Commodity ETF Constituents, additions, deletions or substitutions of assets in the Commodity ETF Constituents and the manner in which changes affecting the Commodity ETF Constituents are reflected in the price of the Commodity ETF Constituents could affect the price of the Commodity ETF Constituents and, therefore, the level of the ETF Efficient Index. The level of the ETF Efficient Index could also be affected if the sponsor of a Commodity ETF Constituent

changes these policies, for example, by changing the manner in which it calculates the price of the relevant Commodity ETF Constituent or if the sponsor discontinues or suspends calculation or publication of the relevant closing price.

The performance of the iShares[®] S&P GSCI Commodity-Indexed Trust may not correlate with the performance of its Reference Index, the S&P GSCI[™] Total Return Index.

Substantially all of the assets of the iShares[®] S&P GSCI Commodity-Indexed Trust (the “**Commodity-Indexed Trust**”) consist of its holdings of the limited liability company interests in the iShares[®] S&P GSCI[™] Commodity-Indexed Investing Pool LLC (the “**Investing Pool**”), which holds long positions in futures contracts on the S&P GSCI[™] Excess Return Index called “CERFs” and posts as margin cash or short-term securities to collateralize its CERF positions. The investment objective of the Commodity-Indexed Trust is to seek investment results that correspond generally, but are not necessarily identical, to the performance of the S&P GSCI[™] Total Return Index, which we refer to as the Reference Index for the Commodity-Indexed Trust, before the payment of expenses and liabilities of the Commodity-Indexed Trust and the Investing Pool. Differences between the returns of the Commodity-Indexed Trust and the S&P GSCI[™] Total Return Index may be based on, among other factors, any differences between the return on the assets used by the Investing Pool to collateralize its CERF positions and the U.S. Treasury rate used to calculate the return component of the S&P GSCI[™] Total Return Index, timing differences, differences between the portion of the Investing Pool’s assets invested in CERFs and the portion of the return of the S&P GSCI[™] Total Return Index contributed by the S&P GSCI[™] Excess Return Index, and the payment of expenses and liabilities by the Commodity-Indexed Trust and the Investing Pool.

The net asset value of the Commodity-Indexed Trust will reflect the performance of the Investing Pool, its sole investment. However, because the shares of the Commodity-Indexed Trust are traded on NYSE Arca, Inc. and are subject to market supply and investor demand, the market value of one Share of the Commodity-Indexed Trust may differ from the net asset value per share of the Commodity-Indexed Trust.

For all of the foregoing reasons, the performance of the Commodity-Indexed Trust may not correlate with the performance of the S&P[®] GSCI[™] Total Return Index. Consequently, the return of the ETF Efficient Index will not be the same as investing directly in the Commodity-Indexed Trust or the S&P[®] GSCI[™] Total Return Index or in the commodity futures contracts or other assets held by the Commodity-Indexed Trust or included in the S&P[®] GSCI[™] Total Return Index, and will not be the same as investing in another financial product with payments linked in part to the performance of the S&P[®] GSCI[™] Total Return Index.

The performance of the SPDR[®] Gold Trust may not correlate with the price of gold.

The performance of SPDR[®] Gold Trust may not fully replicate the performance of the price of gold due to the fees and expenses charged by the SPDR[®] Gold Trust or by restrictions on access to gold due to other circumstances. The SPDR[®] Gold Trust does not generate any income and as the SPDR[®] Gold Trust regularly sells gold to pay for its ongoing expenses, the amount of gold represented by each share gradually declines over time. The SPDR[®] Gold Trust sells gold to pay expenses on an ongoing basis irrespective of whether the trading price of the shares rises or falls in response to changes in the price of gold. The sale of SPDR[®] Gold Trust’s gold to pay expenses at a time of low gold prices could adversely affect the level of the ETF Efficient Index. Additionally, there is a risk that part or all of the SPDR[®] Gold Trust’s gold could be lost, damaged or stolen due to war, terrorism, theft, natural disaster or otherwise.

The net asset value of the SPDR[®] Gold Trust will reflect the performance of gold. However, because the shares of the SPDR[®] Gold Trust are traded on NYSE Arca, Inc. and are subject to market supply and investor demand, the market value of one Share of the SPDR[®] Gold Trust may differ from the net asset value per share of the SPDR[®] Gold Trust.

For all of the foregoing reasons, the performance of the SPDR[®] Gold Trust may not correlate with the performance of the return on gold over the same period. Consequently, the return on the ETF Efficient Index will not be the same as investing directly in the SPDR[®] Gold Trust, gold or other exchange-traded or over-the-counter instruments based on gold, and will not be the same as investing in another financial product with payments linked in part to the performance of the SPDR[®] Gold Trust.

Risks Relating to the Cash Constituent

The JPMorgan Cash Index USD 3 Month will be affected by a number of factors.

The performance of the JPMorgan Cash Index USD 3 Month will depend on a number of factors that can affect the levels of 3-month LIBOR, including, but not limited to:

- *changes in, or perceptions about, future rates:* increased interest rate volatility is historically associated with an increased spread between long- and short-term interest rates and, conversely, decreased volatility is historically associated with tighter spreads;
- *general economic conditions:* the economic, financial, political, regulatory and judicial events that affect financial markets generally will affect 3-month LIBOR;
- *prevailing interest rates:* 3-month LIBOR is subject to daily fluctuations depending on the levels of prevailing interest rates in the market generally; in addition, lower overall interest rates are historically associated with an increased spread between long and short-term interest rates and, conversely, higher overall interest rates are historically associated with tighter spreads; and
- *policy of the Federal Reserve Board regarding interest rates:* an easing of monetary policy is historically associated with an increased spread between long and short-term interest rates and, conversely, a tightening of monetary policy is historically associated with tighter spreads.

These and other factors may have a negative effect on the performance of the JPMorgan Cash Index USD 3 Month.

Three-month LIBOR and the manner in which it is calculated may change in the future.

There can be no assurance that the method by which 3-month LIBOR is calculated will not change. Such changes in the method of calculation could reduce the level of 3-month LIBOR. Accordingly, the return of the JPMorgan Cash Index USD 3 Month may be may be significantly reduced.

Three-month LIBOR may be volatile.

Three-month LIBOR is subject to volatility due to a variety of factors affecting interest rates generally, including:

- sentiment regarding underlying strength in the U.S., European and global economies;
- expectation regarding the level of price inflation;
- sentiment regarding credit quality in U.S., European and global credit markets;
- central bank policy regarding interest rates; and
- performance of capital markets.

Decreases in 3-month LIBOR will have a negative effect on the performance of the JPMorgan Cash Index USD 3 Month.

THE JPMORGAN ETF EFFICIENTE 5 INDEX

General

The JPMorgan ETF Efficiente 5 Index (the “**ETF Efficiente Index**” or the “**Index**”) was developed and is maintained and calculated by J.P. Morgan Securities plc. The description of the Index and methodology included in this index supplement is based on rules formulated by J.P. Morgan Securities plc (the “**Rules**”). The Rules, and not this description, will govern the calculation and constitution of the Index and other decisions and actions related to their maintenance. The Rules in effect as of the date of this index supplement are included as part of the Rules attached as Annex A to this index supplement. The Index is the intellectual property of J.P. Morgan Securities plc, and J.P. Morgan Securities plc reserves all rights with respect to its ownership of the Index. The Index is reported by Bloomberg L.P. under the ticker symbol “EEJPUS5E.”

The ETF Efficiente Index is a notional dynamic basket that tracks the excess return of a portfolio of twelve exchange-traded funds (each an “**ETF Constituent**,” and collectively the “**ETF Constituents**”), with dividends reinvested, and the JPMorgan Cash Index USD 3 Month (including any successor or substitute cash index included in the Index, the “**Cash Constituent**”) over the return of the Cash Constituent. We refer to the ETF Constituents and the Cash Constituent together as the “**Basket Constituents**.” The ETF Constituents represent a diverse range of asset classes and geographic regions.

The JPMorgan ETF Efficiente 5 Index rebalances monthly a synthetic portfolio composed of the Basket Constituents. The Index is based on the “modern portfolio theory” approach to asset allocation, which suggests how a rational investor should allocate his capital across the available universe of assets to maximize return for a given risk appetite. The Index uses the concept of an “efficient frontier” to define the asset allocation of the Index. An efficient frontier for a portfolio of assets defines the optimum return of the portfolio for a given amount of risk. The Index uses the volatility of returns of hypothetical portfolios as the measure of risk. This strategy is based on the assumption that the most efficient allocation of assets is one that maximizes returns per unit of risk. The index level of the ETF Efficiente Index (the “**Index Level**”) is determined by tracking the returns of the synthetic portfolio above the return of the Cash Constituent.

The strategy assigns the weights to the Basket Constituents based upon the returns and volatilities of multiple hypothetical portfolios comprising the Basket Constituents measured over the previous six months. The re-weighting methodology seeks to identify the weights for each Basket Constituent that would have resulted in the hypothetical portfolio with the highest return over the relevant measurement period subject to an annualized volatility over the same period of 5% or less. Thus, the portfolio exhibiting the highest return with an annualized volatility of 5% or less is then selected, with the weighting for such portfolio applied to the Basket Constituents. In the event that none of the portfolios has an annualized volatility equal to or less than 5%, this volatility threshold is increased by 1% until a portfolio is selected.

No assurance can be given that the investment strategy used to construct the ETF Efficiente Index will be successful or that the ETF Efficiente Index will outperform any alternative basket or strategy that might be constructed from the Basket Constituents. Furthermore, no assurance can be given that the ETF Efficiente Index will achieve its target volatility of 5%. The actual realized volatility of the ETF Efficiente Index may be greater or less than 5%.

The Weight of the Cash Constituent at any given time represents the portion of the synthetic portfolio that is uninvested at that time. The ETF Efficiente Index will reflect no return for any uninvested portion (*i.e.*, any portion represented by the Cash Constituent). While the weight of the Cash Constituent is normally limited by a Weighting Constraint of 50%, if any Basket Constituent is replaced with the Cash Constituent, as described below, the aggregate Weight of the Cash Constituent would be allowed to exceed the 50% because a portion of such aggregate Weight would be subject to the Weighting Constraints specific to the replaced Basket Constituent and not the Weighting Constraints applicable to the Cash Constituent itself.

The Index is described as a “notional” or synthetic portfolio or basket of assets because there is no actual portfolio of assets to which any person is entitled or in which any person has any ownership interest. The Index merely references certain assets, the performance of which will be used as a reference point for calculating the Index Level.

The Index Calculation Agent; Amendment of Rules; Limitation of Liability

J.P. Morgan Securities plc (“**JPMS plc**”) or any affiliate or subsidiary designated by it will act as calculation agent for the Index (the “**index calculation agent**”). The index calculation agent’s determinations in respect of the Index and interpretation of the Rules will be final. The Rules may be supplemented, amended or restated from time to time at the discretion of JPMS plc in its capacity as index calculation agent.

The index calculation agent will act in good faith and in a commercially reasonable manner with respect to the performance of its obligations and the exercise of its discretions pursuant to the Rules.

While the Rules are intended to be comprehensive, ambiguities may arise. In those circumstances, the index calculation agent will resolve those ambiguities in a reasonable manner and, if necessary, amend the Rules to reflect that resolution.

Neither the index calculation agent nor any of its affiliates or subsidiaries or any of their respective directors, officers, employees, representatives, delegates or agents (each a “**Relevant Person**”) will have any responsibility to any person (whether as a result of negligence or otherwise) for any determinations made or anything done (or omitted to be determined or done) in respect of the Index and any use to which any person may put the Index or the Index Levels. No Relevant Person will take any person’s interests into account in making any determination in respect of the Index. All determinations of the index calculation agent in respect of the Index will be final, conclusive and binding and no person will be entitled to make any claim against any of the Relevant Persons in respect thereof. Once a determination or calculation is made or action taken by the index calculation agent in respect of the Index, neither the index calculation agent nor any other Relevant Person will be under any obligation to revise any determination or calculation made or action taken for any reason.

The Basket Constituents of the Index

Subject to the occurrence of an Extraordinary Event (as defined below), the Basket Constituents are set out in Table 1 below. Table 1 also contains the Bloomberg ticker for each Basket Constituent for ease of identification, as well as the primary exchange and Related Exchange for each ETF Constituent.

Table 1

	Basket Constituent Name	Bloomberg Ticker	Primary Exchange	Related Exchange
1	SPDR [®] S&P 500 [®] ETF Trust	SPY	NYSE Arca, Inc. (“NYSE Arca”)	All Exchanges
2	iShares [®] Russell 2000 Index Fund	IWM	NYSE Arca	All Exchanges
3	iShares [®] MSCI EAFE Index Fund	EFA	NYSE Arca	All Exchanges
4	iShares [®] Barclays 20+ Year Treasury Bond Fund	TLT	NYSE Arca	All Exchanges
5	iShares [®] iBoxx \$ Investment Grade Corporate Bond Fund	LQD	NYSE Arca	All Exchanges
6	iShares [®] iBoxx \$ High Yield Corporate Bond Fund	HYG	NYSE Arca	All Exchanges
7	iShares [®] MSCI Emerging Markets Index Fund	EEM	NYSE Arca	All Exchanges
8	iShares [®] JPMorgan USD Emerging Markets Bond Fund	EMB	NYSE Arca	All Exchanges
9	iShares [®] Dow Jones Real Estate Index Fund	IYR	NYSE Arca	All Exchanges
10	iShares [®] S&P GSCI [™] Commodity-Indexed Trust	GSG	NYSE Arca	All Exchanges
11	SPDR [®] Gold Trust	GLD	NYSE Arca	All Exchanges
12	iShares [®] Barclays TIPS Bond Fund	TIP	NYSE Arca	All Exchanges
13	JPMorgan Cash Index USD 3 Month	JPCAUS3M	N/A	N/A

Determining the Weights for the Basket Constituents

The Index will be rebalanced on the first Index Business Day of each calendar month (each such day a “**Re-weighting Date**”), subject to adjustment if an Index Market Disruption Event has occurred and is continuing.

An “**Index Business Day**” means a day (i) on which the New York Stock Exchange is scheduled to open for trading for its regular trading session and (ii) that is a Dealing Day for all Basket Constituents.

“**Dealing Day**” means (a) in respect of any Basket Constituent that is an index, including the Cash Constituent, a day upon which the Closing Level for the Basket Constituent is (or, but for the occurrence of an Index Market Disruption Event, would have been) scheduled to be calculated and published by the relevant Basket Constituent Sponsor and (b) in respect of an ETF Constituent, each day on which the primary exchange in the United States for that ETF Constituent is scheduled to be open for trading for its regular trading session.

(a) *Identifying the Performance Observation Periods*

The weights assigned to the Basket Constituents are determined two Index Business Days before the Re-weighting Date (the “**Re-weighting Selection Date**”), subject to adjustment. These weights are based on the returns and volatilities of multiple hypothetical portfolios comprising the Basket Constituents over the period of 126 Weekdays prior to and including each Re-weighting Selection Date, as identified by the index calculation agent (each, a “**Performance Observation Period**”).

A “**Weekday**” is any day other than a Saturday or a Sunday.

(b) *Identifying the Unique Portfolio for each Performance Observation Period*

With respect to the applicable Performance Observation Period identified by the index calculation agent, on each Re-weighting Selection Date k , the index calculation agent selects the weights in order to identify the hypothetical portfolio with the strongest performance that has an annualized volatility of 5% or less (subject to adjustment) by the following methodology:

1. The index calculation agent calculates the Closing TR Level of each ETF Constituent and obtains the Closing Level of each Basket Constituent that is an index, including the Cash Constituent, for each Weekday during the relevant Performance Observation Period. If any Weekday is not a Dealing Day with respect to a Basket Constituent or if the index calculation agent cannot obtain relevant reliable information from third party sources, the Closing TR Level or Closing Level, as the case may be, for that Basket Constituent in respect of that Weekday will be deemed to be the Closing TR Level or the Closing Level, as the case may be, for that Basket Constituent as of the immediately preceding Dealing Day for that Basket Constituent for which the index calculation agent can obtain relevant reliable information from third party sources.

“**Closing TR Level**” means, subject to the provisions of “— Index Market Disruption Events” below, with respect to a Basket Constituent if that Basket Constituent is an ETF Constituent and a Dealing Day, the Closing Level of the ETF Constituent with the dividends re-invested, determined for each ETF Constituent on each Dealing Day to be the product of (x) the Closing TR Level of that ETF Constituent on the immediately preceding Dealing Day and (y) the quotient of (a) the Closing Level of that ETF Constituent on that Dealing Day *plus* the Gross Dividend Amount of that ETF Constituent (if that Dealing Day is an Ex-Dividend Date for that ETF Constituent) *divided* by (b) the Closing Level of that ETF Constituent on the immediately preceding Dealing Day.

“**Closing Level**,” means, subject to the provisions of “— Index Market Disruption Events” and “— Extraordinary Events” below, (a) in respect of a Basket Constituent that is an index, including the Cash Constituent, and a Dealing Day, (i) the official closing level of the applicable Basket Constituent published by the relevant Basket Constituent Sponsor for such Dealing Day; *provided, however*, that if the index calculation agent determines that the official closing level reflects manifest error on the part of the relevant Basket Constituent Sponsor, the index calculation agent will determine the closing level of the index in good faith and in a commercially reasonable manner or (ii) in such circumstances as set out in the definition of Non-Publication Event relating to the calculation of a Proxy Calculated Level, the Proxy Calculated Level, and (b) in respect of an ETF Constituent and a Dealing Day, the last reported sale price, regular way (or, in the case of the NASDAQ Stock Market, the official closing price) of the principal trading session on that Dealing Day on the principal U.S. securities exchange registered under the Securities Exchange Act of 1934, as amended (the “**Exchange Act**”), on which that ETF Constituent is listed or admitted to trading.

“**Gross Dividend Amount**” means, in respect of an ETF Constituent and an Ex-Dividend Date for that ETF Constituent, 100% of the amount of any dividend or other distribution per share of the ETF Constituent that a shareholder in that ETF Constituent on that Ex-Dividend Date would no longer have the right to receive due to the occurrence of that Ex-Dividend Date, as determined by the index calculation agent in its discretion as (x) the amount of any cash dividend paid or other cash distribution made and (y) the fair market value of any distribution of shares of capital stock, evidences of indebtedness or other assets or property of that ETF Constituent (other than share dividends or distributions). If a portion of that distribution consists of property traded on the Ex-Dividend Date on a U.S. national securities exchange, the fair market value of that portion will equal the closing price of that distributed property on that Ex-Dividend Date.

“**Ex-Dividend Date**” means, with respect to a dividend or other distribution for an ETF Constituent, the first trading day on which transactions in the shares of that ETF Constituent trade on the primary exchange without the right to receive that dividend or other distribution.

“**Basket Constituent Sponsor**” means, in respect of a Basket Constituent, the sponsor or successor sponsor of that Basket Constituent.

2. The index calculation agent identifies all possible Eligible Portfolios as described below under “*Eligible Portfolios and Weighting Constraints*.”

3. The index calculation agent calculates the Performance of each Eligible Portfolio over the relevant Performance Observation Period, which is equal to the sum of the weighted returns of each Basket Constituent (based on the weights assigned to the Basket Constituents in the relevant Eligible Portfolio) over the relevant Performance Observation Period, minus one.

“**Performance**” means, in respect of an Eligible Portfolio and a Performance Observation Period, the performance of that Eligible Portfolio over that Performance Observation Period, as determined by the index calculation agent using the algorithm(s) set out in the Rules.

4. The index calculation agent calculates the annualized realized volatility of each Eligible Portfolio over the Performance Observation Period (the “**Realized Volatility**”) based on a pre-determined formula.

5. The index calculation agent selects the Eligible Portfolio with the strongest performance over the relevant Performance Observation Period (with a precision of as many decimal places as necessary) that has an annualized Realized Volatility equal to or less than the Target Volatility, which is subject to adjustment as described below. The Eligible Portfolio that satisfies these criteria is known as the “**Unique Portfolio**” for that Performance Observation Period.

The “**Target Volatility**” means 5% and is subject to adjustment as described in (6) below.

6. If none of the Eligible Portfolios has an annualized Realized Volatility equal to or less than the Target Volatility, the index calculation agent will increase the Target Volatility by one percent (1%) and repeat step (5) above until a Unique Portfolio is selected. These steps, including an increase to the Target Volatility, may be repeated further until a Unique Portfolio is selected.

(c) *Determining the Weight to be assigned to each Basket Constituent on the relevant Re-weighting Date*

The weight assigned to each Basket Constituent as of any Re-weighting Date will be determined by the index calculation agent as the weight assigned to that Basket Constituent within the Unique Portfolio identified with respect to the immediately preceding Re-weighting Selection Date (the “**Weight**”).

The effective Weight of each of the Basket Constituents within the ETF Efficient Index may fluctuate during the period from one Re-weighting Date to the next Re-weighting Date due to movements in the level of the Basket Constituents.

(d) *Eligible Portfolios and Weighting Constraints*

For the ETF Efficient Index, an “**Eligible Portfolio**” is any hypothetical portfolio of Basket Constituents that comprises all thirteen (13) of the Basket Constituents and that satisfies the following (the “**Weighting Constraints**”):

- (i) the minimum possible Weight assigned to any Basket Constituent is 0%;
- (ii) the Weight assigned to each Basket Constituent is an integral multiple of 5%;
- (iii) the maximum possible Weight assigned to (x) either of the JPMorgan Cash Index USD 3 Month* or the iShares® Barclays TIPS Bond Fund is 50%, (y) the iShares® Russell 2000 Index Fund or the iShares® S&P GSCI™ Commodity-Indexed Trust or the SPDR® Gold Trust is 10%, and (z) any other Basket Constituent is 20%;

- (iv) the sum of the Weights assigned to the Basket Constituents numbered 1 through 3 in Table 1 above will not be greater than 50%. For the avoidance of doubt, the sum of the Weights assigned to the SPDR[®] S&P 500[®] ETF Trust, iShares[®] Russell 2000 Index Fund and the iShares[®] MSCI EAFE Index Fund will not be greater than 50%;
- (v) the sum of the Weights assigned to the Basket Constituents numbered 4 through 6 in Table 1 above will not be greater than 50%. For the avoidance of doubt, the sum of the Weights assigned to the iShares[®] Barclays 20+ Year Treasury Bond Fund, iShares[®] iBoxx \$ Investment Grade Corporate Bond Fund and iShares[®] iBoxx \$ High Yield Corporate Bond Fund will not be greater than 50%;
- (vi) the sum of the Weights assigned to the Basket Constituents numbered 7 and 8 in Table 1 above will not be greater than 25%. For the avoidance of doubt, the sum of the Weights assigned to the iShares[®] MSCI Emerging Markets Index Fund and iShares[®] JPMorgan USD Emerging Markets Bond Fund will not be greater than 25%;
- (vii) the sum of the Weights assigned to Basket Constituents numbered 9 through 11 in Table 1 above will not be greater than 25%. For the avoidance of doubt, the sum of the Weights assigned to the iShares[®] Dow Jones Real Estate Index Fund, iShares[®] S&P GSCI[™] Commodity-Indexed Trust and SPDR[®] Gold Trust will not be greater than 25%;
- (viii) the sum of the Weights assigned to the Basket Constituents numbered 12 and 13 in Table 1 above will not be greater than 50%. * For the avoidance of doubt, the sum of the Weights assigned to the iShares[®] Barclays US TIPS Bond Fund and the JPMorgan Cash Index USD 3 Month will not be greater than 50%; * and
- (ix) the sum of the Weights assigned to all the Basket Constituents will be equal to 100%.

The following table summarizes the Weighting Constraints described above.

Table 2

	Sector Cap	Basket Constituent	Asset Cap
1	Developed Equities 50%	SPDR [®] S&P 500 [®] ETF Trust	20%
2		iShares [®] Russell 2000 Index Fund	10%
3		iShares [®] MSCI EAFE Index Fund	20%
4	Bonds 50%	iShares [®] Barclays 20+ Year Treasury Bond Fund	20%
5		iShares [®] iBoxx \$ Investment Grade Corporate Bond Fund	20%
6		iShares [®] iBoxx \$ High Yield Corporate Bond Fund	20%
7	Emerging Markets 25%	iShares [®] MSCI Emerging Markets Index Fund	20%
8		iShares [®] Emerging Markets Bond Fund	20%
9	Alternative Investments 25%	iShares [®] Dow Jones Real Estate Index Fund	20%
10		iShares [®] S&P GSCI [™] Commodity-Indexed Trust	10%
11		SPDR [®] Gold Trust	10%
12	Inflation Protected	iShares [®] Barclays TIPS Bond Fund	50%

	Sector Cap	Basket Constituent	Asset Cap
13	Bonds and Cash 50%	JPMorgan Cash Index USD 3 Month*	50%

* For the avoidance of doubt, as a result of the replacement of any Basket Constituent with the Cash Constituent, the aggregate Weight of the Cash Constituent would be allowed to exceed the Weighting Constraints specific to the Cash Constituent because a portion of that aggregate Weight would be subject to the Weighting Constraints specific to the replaced Basket Constituent and not the Weighting Constraints specific to the Cash Constituent.

Consequently, (a) the Weight assigned to each Basket Constituent numbered 1, 3, 4, 5, 6, 7, 8 or 9 in Table 1 above in an eligible portfolio may be any of 0%, 5%, 10%, 15% and 20%; (b) the Weight assigned to each Basket Constituent numbered 2, 10 or 11 in Table 1 above may be any of 0%, 5% and 10%; and (c) the Weight assigned to the Basket Constituent numbered 12 or 13 in Table 1 above may be any of 0%, 5%, 10%, 15%, 20%, 25%, 30%, 35%, 40%, 45% or 50%, *provided* that Weighting Constraints (iv) through (ix) are satisfied.

Calculation of the Index Level

Unless an Index Market Disruption Event has occurred and is continuing, the Index Level will be calculated by the index calculation agent for each Index Business Day.

On October 29, 2010 (the “**Start Date**”), the ETF Efficient Index comprised notional holdings in the Basket Constituents with Weights determined as of the Re-weighting Selection Date immediately preceding the Start Date (the “**Initial Re-weighting Selection Date**”) and effected as of the relevant Re-weighting Date (the “**Initial re-weighting Date**”), in accordance with “Determining the Weights for the Basket Constituents” above. References to “Re-weighting Date” or “Re-weighting Selection Date,” respectively, include references to the Initial Re-weighting Date or Initial Re-weighting Selection Date, respectively. The Index Level for the Index was set at 100 on October 1, 2010 (the “**Base Date**”). The Index Level for the Index on the Start Date was 100.53.

On each Index Business Day t from but excluding the immediately preceding Re-weighting Date k to and including the next following Re-weighting Date $k+1$, the Index Level for the ETF Efficient Index will be calculated according to the following formula:

$$\text{Index}_{k,t} = \text{Index}_k \times \left(\text{Return}_{k,t} - \text{Fee} \times \frac{\text{Days}_{k,t}}{360} \right)$$

where:

$\text{Index}_{k,t}$ means the Index Level of the ETF Efficient Index on Index Business Day t ;

Index_k means the Index Level of the ETF Efficient Index on Re-weighting Date k ;

Fee means 0.50% per annum,

$\text{Days}_{k,t}$ means the number of calendar days from but excluding the Re-weighting Date k to and including Index Business Day t ,

$$\text{Return}_{k,t} = \left(\sum_{i=1}^{13} \frac{S_{k,t}^i}{S_k^i} \times W_k^i \right) - \frac{S_{k,t}^{13}}{S_k^{13}} + 100\%$$

where:

$S_{k,t}^i$ means, for $i = 1$ to 12, the Closing TR Level of Basket Constituent i , if such Basket Constituent is an ETF Constituent, or the Closing Level for Basket Constituent i , if such Basket Constituent is an index that is not the Cash Constituent, on Index Business Day t ;

S_k^i means, for $i = 1$ to 12, the Closing TR Level of Basket Constituent i , if such Basket Constituent is an ETF Constituent, or the Closing Level for Basket Constituent i , if such Basket Constituent is an index that is not the Cash Constituent, on Re-weighting Date k ;

W_k^i means the Weight assigned to Basket Constituent i on Re-weighting Date k (for all Basket Constituents);

$S_{k,t}^{13}$ means the Closing Level of Basket Constituent $i = 13$ (the Cash Constituent) on Index Business Day t ;

S_k^{13} means the Closing Level of Basket Constituent $i = 13$ (the Cash Constituent) on Re-weighting Date k ;

where i for each Basket Constituent is the number (1 through 13) assigned to that Basket Constituent in Table 1 above.

The Index Level on any Index Business Day reflects the sum of the weighted returns of the Basket Constituents over the period between the immediately preceding Re-weighting Date and that Index Business Day, net of the return of the JPMorgan Cash Index USD 3 Month over the same period, minus the portion of the Fee that has accrued over the same period.

The Index Level will be reported to two decimal places.

Index Market Disruption Events

General

An “**Index Market Disruption Event**” occurs if the index calculation agent in its sole discretion determines that on any Dealing Day there has been:

- (i) in respect of any Basket Constituent that is an index or any Reference Index of any ETF Constituent, a failure by the relevant sponsor to calculate and publish the Closing Level for that index on that Dealing Day, or any event that, in the determination of the index calculation agent, disrupts or impairs the ability of market participants generally to effect transactions in or obtain market values for any securities or components that compose the relevant index, any options on instruments related to those securities or components, or relevant futures related to those securities or components, if that disruption relates to securities or components and related options or futures on the same or additional securities or components which securities and components in the aggregate compose 20% or more of the level of the relevant index;
- (ii) in respect of a Basket Constituent that is an equity index or any Reference Index of any ETF Constituent that is an equity index, an Equity Index Disruption Event;
- (iii) in respect of a Basket Constituent that is a commodity index, any Reference Index of any ETF Constituent that is a commodity index or any Reference Commodities of any ETF Constituent, a Commodity Disruption Event; or
- (iv) in respect of an ETF Constituent, an ETF Disruption Event; and

the index calculation agent determines in its sole discretion that the applicable event described above could materially interfere with the ability of market participants to transact in positions with respect to the Index, any Basket Constituent or the Reference Index of any ETF Constituent.

For the purpose of determining whether an Index Market Disruption Event with respect to an index and a Dealing Day exists at any time, if trading in a security or component included in the applicable index is materially suspended or materially limited at that time, then the relevant percentage contribution of that security to the level of the applicable index will be based on a comparison of (x) the portion of the level of the applicable index attributable to that security relative to (y) the overall level of the applicable index, in each case immediately before that suspension or limitation.

An “**Equity Index Disruption Event**” means, in each case as determined by the index calculation agent in its sole discretion:

- (i) the occurrence or existence of a suspension, absence or material limitation of trading of securities then constituting 20% or more of the level of the equity index on the relevant exchanges for those securities for more than two hours of trading during, or during the last one-half hour period preceding the close of, the principal trading session on those relevant primary exchanges; or
- (ii) if applicable, the occurrence or existence of a suspension, absence or material limitation of trading on the primary exchange or market for trading in futures or options contracts related to the equity index for more than two hours of trading during, or during the last one-half hour period preceding the close of, the principal trading session on that applicable exchange or market.

A “**Commodity Disruption Event**” means, in each case as determined by the index calculation agent in its sole discretion:

- (i) a material limitation, suspension, discontinuation or disruption of trading in one or more of the relevant Reference Commodities;
- (ii) a material limitation, suspension, discontinuation or disruption of trading in one or more options or futures contracts on (x) a relevant commodity or commodities related to the relevant commodity index or (y) the relevant Reference Commodities, which results in failure by the relevant exchange on which any such option(s) and/or futures contract(s) is/are traded to report an official settlement price for such option(s) and/or futures contract(s) on the day on which that event occurs or any succeeding day on which it continues;
- (iii) a limitation, suspension or disruption of trading in one or more options or futures contracts on (x) a relevant commodity or commodities related to the relevant commodity index or (y) the relevant Reference Commodities, by reason of movements exceeding “limit up” or “limit down” levels permitted by the relevant exchange and which the index calculation agent determines is material to trading volume and market conditions in such option(s) or futures contract(s) on a Dealing Day;
- (iv) publication by the relevant exchange of a “limit price” as the official settlement price for any futures contract on (x) the relevant commodity or commodities related to the relevant commodity index or (y) the relevant Reference Commodities (by reason of movements exceeding “limit up” or “limit down” levels permitted by the relevant exchange);
- (v) the occurrence of a Non-Publication Event;
- (vi) the relevant exchange for any futures contracts on (x) the relevant commodity or commodities related to the relevant commodity index or (y) the relevant Reference Commodities is not open for trading during its regular trading session as scheduled for the relevant day; or
- (vii) the relevant market for any Reference Commodity is not open for trading during its regular trading session as scheduled for the relevant day.

“**Non-Publication Event**” means the failure by the relevant exchange, index sponsor of the relevant commodity index or other price source to announce publicly or publish the following (or the information necessary for determining the following): (a) the official settlement price for any relevant futures contract on (x) the relevant commodity or commodities related to the relevant commodity index or (y) the relevant Reference Commodities; or (b) the closing level of the relevant commodity index, in either case by noon (London time) on the immediately following Dealing Day, *provided, however*, that the occurrence of such an event will not constitute a “Non-Publication Event” in the case of clause (b) hereof if the index calculation agent determines in its sole discretion by noon (London time) on such immediately following Dealing Day that the information necessary for determining the closing level of the relevant commodity index has been announced publicly or published by the relevant exchange, index sponsor of the relevant commodity index or other price source in which case the index calculation agent will determine the closing level of that commodity index (the closing level so determined being a “**Proxy Calculated Level**”) in good faith and in a commercially reasonable manner.

An “**ETF Disruption Event**” means, in each case as determined by the index calculation agent in its sole discretion:

- (i) the occurrence or existence of a suspension, absence or material limitation of trading of the shares of an ETF Constituent on the relevant primary exchange for such shares for more than two hours of trading during, or during the last one-half hour period preceding the close of, the principal trading session on that relevant primary exchange;
- (ii) a breakdown or failure in the price and trade reporting systems of the relevant primary exchange for the shares of an ETF Constituent as a result of which the reported trading prices for those shares are materially inaccurate for more than two hours of trading during, or during the last one-half hour preceding the close of, the principal trading session on that relevant primary exchange;
- (iii) if applicable, the occurrence or existence of a suspension, absence or material limitation of trading on the primary exchange or market for trading in futures or options contracts related to the shares of an ETF Constituent or on any Related Exchange for that ETF Constituent for more than two hours of trading during, or during the last one-half hour period preceding the close of, the principal trading session in the applicable exchange or market;
- (iv) the net asset value of an ETF Constituent is not calculated or is not announced by the Basket Constituent Sponsor; or
- (v) the relevant sponsor of an ETF Constituent suspends creations or redemptions of shares of that ETF Constituent.

For the purpose of determining whether an Equity Index Disruption Event or an ETF Disruption Event has occurred:

- (i) a limitation on the hours or number of days of trading will not constitute an Equity Index Disruption Event or an ETF Disruption Event if it results from an announced change in the regular business hours of the relevant primary exchange or the primary exchange or market for trading in futures or options contracts related to the relevant shares;
- (ii) limitations pursuant to the rules of any relevant primary exchange similar to New York Stock Exchange Rule 80B (or any applicable rule or regulation enacted or promulgated by any other self-regulatory organization or any government agency of scope similar to New York Stock Exchange Rule 80B as determined by the index calculation agent) on trading during significant market fluctuations will constitute a suspension, absence or material limitation of trading;
- (iii) a suspension of trading in futures or options contracts on the applicable equity index or shares of an ETF Constituent by the primary exchange or market for trading in those contracts or shares by reason of (a) a price change exceeding limits set by that exchange or market, (b) an imbalance of orders relating to those contracts or shares or (c) a disparity in bid and ask quotes relating to those contracts or shares, will constitute a suspension, absence or material limitation of trading in futures or options contracts related to the applicable equity index or the shares of that ETF Constituent; and
- (iv) a suspension, absence or material limitation of trading on any relevant primary exchange or, if applicable, on the primary exchange or market on which futures or options contracts related to the applicable equity index or the shares of an ETF Constituent are traded will not include any time when that exchange or market is itself closed for trading under ordinary circumstances.

A “**Related Exchange**” means, in respect of any ETF Constituent, each exchange or quotation system, if any, specified as such in Table 1 above, any successor to that exchange or quotation system or any substitute exchange or quotation system to which trading in futures or options contracts relating to that ETF Constituent has temporarily relocated (*provided* that the index calculation agent has determined that there is a comparable liquidity relative to the futures or options contracts relating to that ETF Constituent on that temporary substitute exchange or quotation system as on the original Related Exchange), *provided, however*, that where “All Exchanges” is specified as the Related Exchange, “Related Exchange” means each exchange or quotation system (as determined by the index calculation agent) where trading has a material effect (as determined by the index calculation agent) on the overall market for futures or options contracts relating to that ETF Constituent.

“**Reference Index**” means, with respect to an ETF Constituent, the index underlying that ETF Constituent.

“**Reference Commodity**” means, with respect to an ETF Constituent, each commodity underlying that ETF Constituent.

Disruption Affecting a Re-weighting Selection Date

If a Re-weighting Selection Date is a Dealing Day on which an Index Market Disruption Event occurs or is continuing (a “**Disrupted Day**”) in respect of any Basket Constituent (each such Basket Constituent for these purposes, an “**Affected Basket Constituent**”), then the relevant Re-weighting Selection Date will remain the originally scheduled Re-weighting Selection Date and the Closing TR Level or Closing Level, as the case may be, for each Affected Basket Constituent in respect of that Disrupted Day will be deemed to be the Closing TR Level or Closing Level, as the case may be, for the Affected Basket Constituent as of the immediately preceding Dealing Day for the Affected Basket Constituent that was not a Disrupted Day.

Disruption Affecting a Re-weighting Date

If a Re-weighting Date is a Disrupted Day in respect of any Basket Constituent (each such Basket Constituent for these purposes, an “**Affected Basket Constituent**”), then the relevant Re-weighting Date will be deemed to be the first following day that is a Dealing Day for all of the Basket Constituents and that is not a Disrupted Day for any Basket Constituent, unless each of the five Index Business Days immediately following the day originally scheduled to be the Re-weighting Date is a Disrupted Day for any Basket Constituent, in which case the fifth Index Business Day following the day originally scheduled to be the relevant Re-weighting Date will be deemed to be the relevant Re-weighting Date (notwithstanding that it is a Disrupted Day in respect of at least one Basket Constituent), and the index calculation agent will re-weight the ETF Efficient Index acting in good faith using such information and/or methods as it determines, in its reasonable discretion, are appropriate.

Disruption Affecting an Index Business Day

If any Index Business Day is a Disrupted Day for one or more Basket Constituents (each such Basket Constituent for these purposes, an “**Affected Basket Constituent**”), the index calculation agent may either:

(i) calculate its good faith estimate of the Index Level for that Index Business Day, using its good faith estimate of the Closing Level and/or the Closing TR Level of the Affected Basket Constituent(s). Any estimated level may be subject to correction on the first succeeding Index Business Day that is not a Disrupted Day in respect of the Affected Basket Constituent and on the first succeeding Index Business Day that is not a Disrupted Day in respect of any Basket Constituent; or

(ii) suspend the calculation and publication of the Index Level until the first succeeding Index Business Day that is not a Disrupted Day in respect of any Basket Constituent.

For purposes of determining the Closing TR Level for any ETF Constituent on any Dealing Day, if the immediately preceding Dealing Day (“**Prior Dealing Day**”) for that ETF Constituent is a Disrupted Day then, in the formula for determining the Closing TR Level for that Dealing Day, (i) the Closing TR Level for that Prior Dealing Day will be replaced with the Closing TR Level on the immediately preceding Dealing Day that was not a Disrupted Day (the “**Prior Non-Disrupted Dealing Day**”) for that ETF Constituent, (ii) the Closing Level for that Prior Dealing Day will be replaced with the Closing Level on the Prior Non-Disrupted Dealing Day for that ETF Constituent, and (iii) the Gross Dividend Amount of the ETF Constituent in respect of that Dealing Day will be replaced with the sum of the Gross Dividend Amounts of the ETF Constituent in respect of all days from and excluding the Prior Non-Disrupted Dealing Day to and including that Dealing Day.

Extraordinary Events

Certain events may have the effect of any one or more of the thirteen Basket Constituents set out in Table 1 above being succeeded to, being subject to a material change in its calculation or being cancelled. We refer to each of these events individually as an Extraordinary Event, as described in detail below.

(i) For any Basket Constituent, (a) if its level or net asset value is not calculated and is not announced by the Basket Constituent Sponsor for the relevant Basket Constituent, but is calculated and announced by a successor sponsor acceptable to the index calculation agent, or (b) in the case of an index, if it is replaced by a successor index using, in the determination of the index calculation agent, the same or a substantially similar formula for and method of calculation as used in the calculation of that Basket Constituent, or (c) in the case of an ETF Constituent, if it is replaced by a successor ETF whose Reference Commodities are the same as that of the replaced ETF Constituent or whose Reference Index is either the same as that of the replaced ETF Constituent or is an index using, in the determination of the index calculation agent, the same or a substantially similar formula for and method of calculation as used in the calculation of the replaced ETF Constituent's Reference Index and, in any case, whose sponsor is acceptable to the index calculation agent, then, in the case of clause (a), (b) or (c) above, that Basket Constituent thereafter will be deemed to be the successor index or ETF so calculated and announced by that successor sponsor described in clause (a) above or that successor index or ETF described in clause (b) or (c) above, as the case may be, with effect from a date determined by the index calculation agent, which may make such adjustments to the Rules as it determines in good faith are appropriate to account for that change. For the avoidance of doubt, the index calculation agent will not accept a particular successor ETF or successor index if the index calculation agent determines, in its discretion, that doing so would immediately result in the occurrence of an Extraordinary Event. Upon the acceptance of a successor ETF or successor index, that successor will take the place of the relevant Basket Constituent. For the avoidance of doubt, the prior performance of that successor will be used in the identification of the Unique Portfolio for future Performance Observation Periods.

(ii) If an Extraordinary Event occurs in respect of a Basket Constituent, the index calculation agent, acting in good faith and a commercially reasonable manner, will select as a substitute for that Basket Constituent an exchange-traded fund or index that the index calculation agent determines, in its discretion, possesses substantially similar characteristics or provides substantially similar exposure (as considered prior to the occurrence of that Extraordinary Event, with the understanding that an exchange-traded fund can be substantially similar to an index and vice versa) as compared to the Basket Constituent that is being replaced (that substitute ETF or index being referred to herein as a "substitute ETF" or "substitute index," respectively); in that case, the index calculation agent will, in good faith, make such adjustment(s) that it determines to be appropriate to any variable, calculation methodology, valuation terms or any other rule in relation to the ETF Efficient Index to account for that substitution; *provided that* the index calculation agent will not select a substitute ETF for the Cash Constituent, but may select a substitute index for the Cash Constituent; *provided further that*, for any Basket Constituent other than the Cash Constituent, if the index calculation agent determines, in its discretion, that no such substitute ETF and no such substitute index is available, then the index calculation agent will, in its discretion, (x) determine its good faith estimate of the closing price of that Basket Constituent as of a date on or prior to the occurrence of that Extraordinary Event and use such estimate of the closing price (without modification over time) in respect of that Basket Constituent in subsequent calculations of the Index Level of the ETF Efficient Index until the immediately following Re-Weighting Date, (y) replace that Basket Constituent with the Cash Constituent as its substitute and (z) in good faith, make such adjustment(s) that it determines to be appropriate to any variable, calculation methodology, valuation terms or any other rule in relation to the Index to account for that substitution (for the avoidance of doubt, as a result of such a replacement of any Basket Constituent with the Cash Constituent, the aggregate Weight of the Cash Constituent would be allowed to exceed the Weighting Constraints specific to the Cash Constituent, because a portion of that aggregate Weight would be subject to the Weighting Constraints specific to the replaced Basket Constituent and not the Weighting Constraints specific to the Cash Constituent); *provided further that* for the Cash Constituent if the index calculation agent determines, in its discretion, that no such substitute index is available, then the index calculation agent will, in its discretion, calculate the level of the Cash Constituent using, in lieu of a published level for the Cash Constituent, the level for the Cash Constituent as of any future Index Business Day as determined by the index calculation agent in accordance with the formula for and method of calculating the Cash Constituent last in effect prior to the occurrence of that Extraordinary Event, but using only the types of components that comprised the Cash Constituent immediately prior to that Extraordinary Event (and in the case of components with an expiration or maturity, any components required to roll any expiring positions in accordance with the formula for and method of calculating the Cash Constituent will be permitted).

For the avoidance of doubt, the index calculation agent would not be obliged to select a particular substitute ETF or substitute index if the index calculation agent determines, in its discretion, that doing so would result in the occurrence of an Extraordinary Event in respect of that particular substitute ETF or substitute index, considering that particular substitute ETF or substitute index either (A) at the time as of which the relevant Basket Constituent would be replaced or (B) for the time period during which the relevant Basket Constituent that is being replaced had been included in the Index. Upon the selection of a substitute ETF or substitute index, that substitute will take the place of the relevant Basket Constituent. For the avoidance of doubt, the prior performance of that substitute will be used in the identification of the Unique Portfolio for future Performance Observation Periods.

“Extraordinary Event” in respect of a Basket Constituent means:

- (1) for any Basket Constituent that is an index (including, for the avoidance of doubt, the Cash Constituent), the Basket Constituent Sponsor makes a material change in the formula for or the method of calculating that index or in any other way materially modifies that index (other than a modification prescribed in that formula or method to maintain that index in routine circumstances);
- (2) for any Basket Constituent that is an ETF Constituent, the sponsor of the relevant Reference Index of the ETF makes a material change in the formula for or the method of calculating that Reference Index of the ETF or in any other way materially modifies that Reference Index of the ETF (other than a modification prescribed in that formula or method to maintain that Reference Index of the ETF in routine circumstances);
- (3) for any Basket Constituent that is an ETF Constituent, the Basket Constituent Sponsor replaces the Reference Commodities or replaces the Reference Index of the ETF with a successor index that does not, in the determination of the index calculation agent, use the same or a substantially similar formula for and method of calculation as used in the calculation of the replaced Reference Index of the ETF;
- (4) for any Basket Constituent, the Basket Constituent Sponsor permanently cancels the Basket Constituent, and no successor exists, or the Basket Constituent’s level or net asset value is not calculated and is not announced by the Basket Constituent Sponsor for the relevant Basket Constituent, and is not calculated and announced by a successor sponsor acceptable to the index calculation agent;
- (5) in respect of any Basket Constituent that is an index, a failure by the relevant sponsor to calculate and publish the Closing Level for such index for five consecutive Dealing Days;
- (6) an ETF Constituent is de-listed from the relevant primary exchange (as specified in Table 1 above) for that ETF Constituent, liquidated or otherwise terminated;
- (7) a Lock-In Event occurs in respect of an ETF Constituent;
- (8) in respect of a Basket Constituent, at any time, the license granted (if required) by a non-affiliate of the index calculation agent to the index calculation agent (or its affiliates) to use that Basket Constituent for the purposes of the ETF Efficient Index terminates, or the index calculation agent’s rights to use the Basket Constituent for the purpose of the ETF Efficient Index is otherwise disputed by a non-affiliate of the index calculation agent, impaired or ceases (for any reason); or
- (9) the occurrence (and/or continuation) of a Change in Law.

A **“Lock-In Event”** occurs when one or more of the following events occur, and the index calculation agent determines in its sole discretion that that event or combination of events is material (although, for the avoidance of doubt, the index calculation agent has no obligation to monitor actively whether or not any of the following events has occurred):

- (a) There is an amendment, variation or modification to the offering documents of any ETF Constituent that, in the reasonable determination of the index calculation agent, would materially adversely affect the ability of market participants to trade in shares of the ETF Constituent;

- (b) The Average Daily Trading Volume of any ETF Constituent other than those specified in clause (c) of this definition of Lock-in Event declines below \$50 million;
- (c) The Average Daily Trading Volume of the ETF Constituent numbered 8 (iShares[®] JPMorgan USD Emerging Markets Bond Fund) or the ETF Constituent numbered 10 (iShares[®] S&P GSCI[™] Commodity-Indexed Trust) in Table 1 above or any successor to or substitute for any of these ETF Constituents declines below \$7.5 million;
- (d) The Market Capitalization of any ETF Constituent declines below \$500 million;
- (e) The net asset value of any ETF Constituent is not calculated or is not announced by the relevant Basket Constituent Sponsor for five consecutive Dealing Days for that ETF Constituent;
- (f) The relevant sponsor of the Reference Index of any ETF Constituent fails to calculate and publish the Closing Level for that index for five consecutive Dealing Days; or
- (g) The relevant sponsor of any ETF Constituent suspends creations or redemptions of shares of that ETF Constituent for 5 consecutive Dealing Days or announces a suspension of unlimited duration of such creations or redemptions.

“**Average Daily Trading Volume**” means, with respect to an ETF Constituent and an Index Business Day, the product of (a) the average volume of trading in the shares of that ETF Constituent on all exchanges over the preceding 6 month period, as reported by Bloomberg using the function ETF Ticker US HP and selecting a 6 month range or another provider selected by the index calculation agent, and (b) the Closing Level of that ETF Constituent on that Index Business Day.

“**Market Capitalization**” means, with respect to an ETF Constituent and an Index Business Day, the market capitalization of that ETF Constituent as provided by Bloomberg on the “DES” page or by another information provider selected by the index calculation agent for that ETF Constituent on that Index Business Day.

A “**Change in Law**” occurs when, due to either:

- (a) the adoption of, or any change in, any applicable law, regulation or rule (including, without limitation, any tax law); or
- (b) the promulgation of, or any change in, the interpretation by any court, tribunal or regulatory authority with competent jurisdiction of any applicable law, rule, regulation or order (including, without limitation, as implemented by the U.S. Commodity Futures Trading Commission or any exchange or trading facility); and

the index calculation agent determines in good faith that (x) it is contrary to such law, rule, regulation or order for any market participants that are brokers or financial intermediaries (individually or collectively) to hold, acquire or dispose of (in whole or in part) any Basket Constituent, any transaction referencing any Basket Constituent or any component of any Basket Constituent or of any Reference Index of any ETF Constituent or (y) holding a position in any Basket Constituent, any transaction referencing any Basket Constituent or any component of any Basket Constituent or of any Reference Index of any ETF Constituent is (or, but for the consequent disposal or termination thereof, would otherwise be) in excess of any allowable position limit(s) applicable to any market participants that are brokers or financial intermediaries (individually or collectively) under any such law, rule or regulation in relation to that Basket Constituent, transaction referencing the Basket Constituent or component of the Basket Constituent or of the Reference Index of the ETF Constituent, including in any case traded on any exchange(s) or other trading facility (including, without limitation, any relevant exchange).

Anti-dilution Adjustments

With respect to each ETF Constituent (or the relevant successor or substitute ETF), the index calculation agent will make anti-dilution adjustments to the Closing Level of that ETF Constituent only (a) if the shares of that ETF Constituent are subject to a share split or reverse share split, once such split has become effective, and (b) if that ETF Constituent is subject to (i) an issuance of additional shares of that ETF Constituent that is given ratably to all or

substantially all holders of shares of that ETF Constituent or (ii) a distribution of shares of that ETF Constituent as a result of the triggering of any provision of the corporate charter of that ETF Constituent, once the dividend or distribution has become effective and the shares of that ETF Constituent are trading ex-dividend. The index calculation agent will be solely responsible for the determination and calculation of any anti-dilution adjustments and any related determinations and calculations, and its determinations and calculations with respect thereto will be conclusive in the absence of manifest error.

Corrections

If (a) the Closing Level of any Basket Constituent as of any date which is published or otherwise made available in respect of the relevant Basket Constituent is subsequently corrected and that correction is published or otherwise made available in respect of that Basket Constituent; or (b) the index calculation agent identifies an error or omission in any of its calculations or determinations in respect of the ETF Efficient Index, then the index calculation agent may, if practicable and if the index calculation agent determines acting in good faith that such correction, error or omission (as the case may be) is material, adjust or correct the relevant calculation or determination and/or the Index Level as of any Index Business Day to take into account that correction.

BASKET CONSTITUENTS OF THE INDEX

BACKGROUND ON THE SPDR® S&P 500® ETF TRUST

All information contained in this index supplement regarding the SPDR® S&P 500® ETF Trust, including, without limitation, its make-up, method of calculation and changes in its components, from publicly available information, without independent verification. This information reflects the policies of, and is subject to change by, State Street Bank and Trust Company, as trustee of the SPDR® S&P 500® ETF Trust (“**SSBTC**”), and PDR Services LLC, as sponsor of the SPDR® S&P 500® ETF Trust (“**PDRS**”). The SPDR® S&P 500® ETF Trust is a unit investment trust that issues securities called “**Trust Units**” or “**Units**.” The SPDR® S&P 500® ETF Trust is an exchange-traded fund (“**ETF**”) that trades on the NYSE Arca, Inc. (“**NYSE Arca**”) under the ticker symbol “**SPY**.”

The SPDR® S&P 500® ETF Trust is an investment company registered under the Investment Company Act of 1940, as amended. Trust Units represent an undivided ownership interest in a portfolio of all, or substantially all, of the common stocks of the S&P 500® Index. Information provided to or filed with the SEC by the SPDR® S&P 500® ETF Trust pursuant to the Securities Act of 1933, as amended, and the Investment Company Act of 1940, as amended, can be located by reference to SEC file numbers 033-46080 and 811-06125, respectively, through the SEC’s website at <http://www.sec.gov>. For additional information regarding the SPDR® S&P 500® ETF Trust, SSBTC and PDRS, please see the SPDR® S&P 500® ETF Trust’s prospectus. In addition, information about the SPDR® S&P 500® ETF Trust, SSBTC and PDRS may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents and the SPDR® S&P 500® ETF Trust website at <https://www.spdrs.com/product/fund.seam?ticker=SPY>. Information contained in the SPDR® S&P 500® ETF Trust’s website is not incorporated by reference in, and should not be considered a part of, this index supplement.

Investment Objective and Strategy

The SPDR® S&P 500® ETF Trust’s objective is to provide investment results that, before expenses, generally correspond to the price and yield performance of the S&P 500® Index. See “— The S&P 500® Index” below for more information about the S&P 500® Index. The Trust holds stocks and cash and is not actively managed by traditional methods, which typically involve effecting changes in the holdings of stocks and cash on the basis of judgments made relating to economic, financial and market considerations. To maintain the correspondence between the composition and weightings of the stocks held by the SPDR® S&P 500® ETF Trust and the component stocks of the S&P 500® Index, which we refer to as “**Index Securities**,” SSBTC adjusts the holdings of the SPDR® S&P 500® ETF Trust from time to time to conform to periodic changes in the identity and/or relative weightings of the Index Securities. SSBTC aggregates certain of these adjustments and makes changes to the holdings of the SPDR® S&P 500® ETF Trust at least monthly or more frequently in the case of significant changes to the S&P 500® Index. Any change in the identity or weighting of an Index Security will result in a corresponding adjustment to the prescribed holdings of the SPDR® S&P 500® ETF Trust effective on any day that the New York Stock Exchange (“**NYSE**”) is open for business following the day on which the change to the S&P 500® Index takes effect after the close of the market.

The value of Trust Units fluctuates in relation to changes in the value of the holdings of the SPDR® S&P 500® ETF Trust. The market price of each individual Trust Unit may not be identical to the net asset value of such Trust Unit.

The SPDR® S&P 500® ETF Trust may not be able to replicate exactly the performance of the S&P 500® Index because the total return generated by the SPDR® S&P 500® ETF Trust’s portfolio of stocks and cash is reduced by the expenses of the SPDR® S&P 500® ETF Trust and transaction costs incurred in adjusting the actual balance of the SPDR® S&P 500® ETF Trust’s portfolio. In addition, it is possible that the SPDR® S&P 500® ETF Trust may not always fully replicate the performance of the S&P 500® Index due to the unavailability of certain Index Securities in the secondary market or due to other extraordinary circumstances.

As of June 22, 2012, the SPDR® S&P 500® ETF Trust’s three largest holdings were Apple Inc., Exxon Mobil Corporation and Microsoft Corporation and its three largest sectors were information technology, financials and health care.

Holdings Information

The following tables summarize the SPDR® S&P 500® ETF Trust's top holdings in individual companies and by sectors as of June 22, 2012.

Top Holdings in Individual Securities as of June 22, 2012

Name	Weight
Apple Inc.	4.51%
Exxon Mobil Corporation	3.21%
Microsoft Corporation	1.88%
International Business Machines	1.86%
General Electric Company	1.73%
AT&T Inc	1.71%
Chevron Corporation	1.65%
Johnson & Johnson	1.52%
Wells Fargo & Company	1.44%
Pfizer Inc.	1.41%

Top Holdings by Sector as of June 22, 2012

Sector	Percentage of Total Holdings
Information Technology	19.87%
Financials	14.37%
Health Care	11.99%
Consumer Staples	11.31%
Consumer Discretionary	11.11%
Energy	10.54%
Industrials	10.43%
Utilities	3.75%
Materials	3.39%
Telecommunication Services	3.24%

The information above was compiled from the SPDR® S&P 500® ETF Trust's website, without independent verification. Information contained in the SPDR® S&P 500® ETF Trust's website is not incorporated by reference in, and should not be considered a part of, this index supplement.

Disclaimer

The ETF Efficient Index is not sponsored, endorsed, sold or promoted by the SPDR® S&P 500® ETF Trust, SSBTC or PDRS. None of the SPDR® S&P 500® ETF Trust, SSBTC or PDRS makes any representations or warranties to the any member of the public regarding the advisability of investing in the ETF Efficient Index. None of the SPDR® S&P 500® ETF Trust, SSBTC or PDRS has any obligation or liability in connection with the operation, marketing, trading or sale of the ETF Efficient Index.

The S&P 500® Index

All information contained in this index supplement regarding the S&P 500® Index, including, without limitation, its make-up, method of calculation and changes in its components, from publicly available information, without independent verification. This information reflects the policies of, and is subject to change by, Standard & Poor's Financial Services LLC ("S&P"). The S&P 500® Index was developed by S&P and is calculated, maintained and

published by S&P. S&P has no obligation to continue to publish, and may discontinue the publication of, the S&P 500[®] Index.

The S&P 500[®] Index is reported by Bloomberg L.P. under the ticker symbol “SPX.”

In November 2011, The McGraw-Hill Companies, Inc. (“**McGraw-Hill**”), the owner of the S&P Indices business, and CME Group Inc. (“**CME Group**”), the 90% owner of the CME Group and Dow Jones & Company, Inc. joint venture that owns the Dow Jones Indexes business, announced a new joint venture, S&P/Dow Jones Indices, which will own the S&P Indices business and the Dow Jones Indexes business, including the S&P 500[®] Index.

The S&P 500[®] Index is intended to provide a performance benchmark for the U.S. equity markets. The calculation of the level of the S&P 500[®] Index (discussed below in further detail) is based on the relative value of the aggregate Market Value (as defined below) of the common stocks of 500 companies (the “**S&P Component Stocks**”) as of a particular time as compared to the aggregate average Market Value of the common stocks of 500 similar companies during the base period of the years 1941 through 1943. Historically, the “Market Value” of any S&P Component Stock was calculated as the product of the market price per share and the number of the then-outstanding shares of such S&P Component Stock. As discussed below, on March 21, 2005, S&P began to use a new methodology to calculate the Market Value of the S&P Component Stocks and on September 16, 2005, S&P completed its transition to the new calculation methodology. The 500 companies are not the 500 largest companies listed on the New York Stock Exchange (the “**NYSE**”) and not all 500 companies are listed on such exchange. S&P chooses companies for inclusion in the S&P 500[®] Index with the objective of achieving a distribution by broad industry groupings that approximates the distribution of these groupings in the common stock population of the U.S. equity market. S&P may from time to time, in its sole discretion, add companies to, or delete companies from, the S&P 500[®] Index to achieve the objectives stated above. Relevant criteria employed by S&P include the viability of the particular company, the extent to which that company represents the industry group to which it is assigned, the extent to which the company’s common stock is widely-held and the Market Value and trading activity of the common stock of that company.

On March 21, 2005, S&P began to calculate the S&P 500[®] Index based on a half float-adjusted formula, and on September 16, 2005, the S&P 500[®] Index became fully float-adjusted. S&P’s criteria for selecting stocks for the S&P 500[®] Index was not changed by the shift to float adjustment. However, the adjustment affects each company’s weight in the S&P 500[®] Index (*i.e.*, its Market Value).

Under float adjustment, the share counts used in calculating the S&P 500[®] Index reflect only those shares that are available to investors, not all of a company’s outstanding shares. S&P defines three groups of shareholders whose holdings are subject to float adjustment:

- holdings by other publicly traded corporations, venture capital firms, private equity firms, strategic partners, or leveraged buyout groups;
- holdings by government entities, including all levels of government in the United States or foreign countries; and
- holdings by current or former officers and directors of the company, founders of the company or family trusts of officers, directors or founders, as well as holdings of trusts, foundations, pension funds, employee stock ownership plans, or other investment vehicles associated with and controlled by the company.

However, treasury stock, stock options, equity participation units, warrants, preferred stock, convertible stock and rights are not part of the float. In cases where holdings in a group exceed 10% of the outstanding shares of a company, the holdings of that group will be excluded from the float-adjusted count of shares to be used in the S&P 500[®] Index calculation. Mutual funds, investment advisory firms, pension funds or foundations not associated with the company and investment funds in insurance companies, shares that trust beneficiaries may buy or sell without difficulty or significant additional expense beyond typical brokerage fees, and, if a company has multiple classes of stock outstanding, shares in an unlisted or non-traded class if such shares are convertible by shareholders without undue delay and cost, are also part of the float. Shares held in a trust to allow investors in countries outside the country of domicile (*e.g.*, ADRs, CDIs and Canadian exchangeable shares) are normally part of the float.

For each stock, an investable weight factor (“**IWF**”) is calculated by dividing the available float shares, defined as the total shares outstanding less shares held in one or more of the three groups listed above where the group holdings

exceed 10% of the outstanding shares, by the total shares outstanding. (On March 21, 2005, the S&P 500[®] Index moved halfway to float adjustment, meaning that if a stock has an IWF of 0.80, the IWF used to calculate the S&P 500[®] Index between March 21, 2005 and September 16, 2005 was 0.90. On September 16, 2005, S&P began to calculate the S&P 500[®] Index on a fully float-adjusted basis, meaning that if a stock has an IWF of 0.80, the IWF used to calculate the S&P 500[®] Index on and after September 16, 2005 is 0.80.) The float-adjusted Index is calculated by dividing the sum of the IWF multiplied by both the price and the total shares outstanding for each stock by the Index Divisor. For companies with multiple classes of stock, S&P calculates the weighted average IWF for each stock using the proportion of the total company market capitalization of each share class as weights.

The S&P 500[®] Index is calculated using a base-weighted aggregate methodology: the level of the S&P 500[®] Index reflects the total Market Value of all 500 S&P Component Stocks relative to the S&P 500[®] Index's base period of 1941–43 (the “**Base Period**”).

An indexed number is used to represent the results of this calculation in order to make the value easier to work with and track over time.

The actual total Market Value of the S&P Component Stocks during the Base Period has been set equal to an indexed value of 10. This is often indicated by the notation 1941–43=10. In practice, the daily calculation of the S&P 500[®] Index is computed by dividing the total Market Value of the S&P Component Stocks by a number called the Index Divisor. By itself, the Index Divisor is an arbitrary number. However, in the context of the calculation of the S&P 500[®] Index, it is the only link to the original Base Period level of the S&P 500[®] Index. The Index Divisor keeps the S&P 500[®] Index comparable over time and is the manipulation point for all adjustments to the S&P 500[®] Index (“**Index Maintenance**”).

Index Maintenance includes monitoring and completing the adjustments for company additions and deletions, share changes, stock splits, stock dividends and stock price adjustments due to company restructurings or spin-offs.

To prevent the level of the S&P 500[®] Index from changing due to corporate actions, all corporate actions which affect the total Market Value of the S&P 500[®] Index require an Index Divisor adjustment. By adjusting the Index Divisor for the change in total Market Value, the level of the S&P 500[®] Index remains constant. This helps maintain the level of the S&P 500[®] Index as an accurate barometer of stock market performance and ensures that the movement of the S&P 500[®] Index does not reflect the corporate actions of individual companies in the S&P 500[®] Index. All Index Divisor adjustments are made after the close of trading and after the calculation of the closing level of the S&P 500[®] Index. Some corporate actions, such as stock splits and stock dividends, require simple changes in the common shares outstanding and the stock prices of the companies in the S&P 500[®] Index and do not require Index Divisor adjustments.

The table below summarizes the types of Index Maintenance adjustments and indicates whether or not an Index Divisor adjustment is required.

Type of Corporate Action	Comments	Divisor Adjustment
Company added/ deleted	Net change in market value determines divisor adjustment.	Yes
Change in shares outstanding	Any combination of secondary issuance, share repurchase or buy back – share counts revised to reflect change.	Yes
Stock split	Share count revised to reflect new count. Divisor adjustment is not required since the share count and price changes are offsetting.	No
Spin-off	If the spun-off company is not being added to the index, the divisor adjustment reflects the decline in index market value (<i>i.e.</i> , the value of the spun-off unit).	Yes

Type of Corporate Action	Comments	Divisor Adjustment
Spin-off	Spun-off company added to the index, another company removed to keep number of names fixed. Divisor adjustment reflects deletion.	Yes
Change in IWF due to a corporate action or a purchase or sale by an inside holder	Increasing (decreasing) the IWF increases (decreases) the total market value of the index. The divisor change reflects the change in market value caused by the change to an IWF.	Yes
Special dividend	When a company pays a special dividend the share price is assumed to drop by the amount of the dividend; the divisor adjustment reflects this drop in index market value.	Yes
Rights offering	Each shareholder receives the right to buy a proportional number of additional shares at a set (often discounted) price. The calculation assumes that the offering is fully subscribed. Divisor adjustment reflects increase in market cap measured as the shares issued multiplied by the price paid.	Yes

Stock splits and stock dividends do not affect the Index Divisor, because following a split or dividend, both the stock price and number of shares outstanding are adjusted by S&P so that there is no change in the Market Value of the S&P Component Stock. All stock split and dividend adjustments are made after the close of trading on the day before the ex-date.

Each of the corporate events exemplified in the table requiring an adjustment to the Index Divisor has the effect of altering the Market Value of the S&P Component Stock and consequently of altering the aggregate Market Value of the S&P Component Stocks (the “**Post-Event Aggregate Market Value**”). In order that the level of the S&P 500[®] Index (the “**Pre-Event Index Value**”) not be affected by the altered Market Value (whether increase or decrease) of the affected Component Stock, a new Index Divisor (“**New Divisor**”) is derived as follows:

$$\frac{\text{Post-Event Aggregate Market Value}}{\text{New Divisor}} = \text{Pre-Event Index Value}$$

$$\text{New Divisor} = \frac{\text{Post-Event Aggregate Market Value}}{\text{Pre-Event Index Value}}$$

A large part of the Index Maintenance process involves tracking the changes in the number of shares outstanding of each of the S&P 500[®] Index companies. Four times a year, on a Friday close to the end of each calendar quarter, the share totals of companies in the S&P 500[®] Index are updated as required by any changes in the number of shares outstanding. After the totals are updated, the Index Divisor is adjusted to compensate for the net change in the total Market Value of the S&P 500[®] Index. In addition, any changes over 5% in the current common shares outstanding for the S&P 500[®] Index companies are carefully reviewed on a weekly basis, and when appropriate, an immediate adjustment is made to the Index Divisor.

BACKGROUND ON THE iSHARES[®] RUSSELL 2000 INDEX FUND

All information contained in this index supplement regarding the iShares[®] Russell 2000 Index Fund, including, without limitation, its make-up, method of calculation and changes in its components, from publicly available information, without independent verification. This information reflects the policies of, and is subject to change by, iShares[®] Trust, BlackRock Institutional Trust Company, N.A. (“BTC”) and BlackRock Fund Advisors (“BFA”). The iShares[®] Russell 2000 Index Fund is an investment portfolio maintained and managed by iShares[®] Trust. BFA is currently the investment adviser to the iShares[®] Russell 2000 Index Fund. The iShares[®] Russell 2000 Index Fund is an exchange-traded fund (“ETF”) that trades on the NYSE Arca, Inc. (“NYSE Arca”) under the ticker symbol “IWM.”

iShares[®] Trust is a registered investment company that consists of numerous separate investment portfolios, including the iShares[®] Russell 2000 Index Fund. Information provided to or filed with the SEC by iShares[®] Trust pursuant to the Securities Act of 1933, as amended, and the Investment Company Act of 1940, as amended, can be located by reference to SEC file numbers 333-92935 and 811-09729, respectively, through the SEC’s website at <http://www.sec.gov>. For additional information regarding iShares[®] Trust, BFA and the iShares[®] Russell 2000 Index Fund, please see the prospectus. In addition, information about iShares[®] Trust and the iShares[®] Russell 2000 Index Fund may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents and the iShares[®] website at www.ishares.com. Information contained in the iShares[®] website is not incorporated by reference in, and should not be considered a part of, this index supplement.

Investment Objective and Strategy

The iShares[®] Russell 2000 Index Fund seeks investment results that correspond generally to the price and yield performance, before fees and expenses, of the Russell 2000[®] Index. See “— The Russell 2000[®] Index” below for more information about the Russell 2000[®] Index. The iShares[®] Russell 2000 Index Fund’s investment objective and the Russell 2000[®] Index may be changed without shareholder approval.

As of June 21, 2012, the iShares[®] Russell 2000 Index Fund’s three largest holdings were Onyx Pharmaceuticals, Inc., Kilroy Realty Corporation and American Campus Communities, and its three largest sectors were financial services, consumer discretionary and producer durables.

The iShares[®] Russell 2000 Index Fund uses a representative sampling strategy (as described below under “— Representative Sampling”) to try to track the Russell 2000[®] Index. The iShares[®] Russell 2000 Index Fund generally invests at least 90% of its assets in the securities of the Russell 2000[®] Index and in depositary receipts representing securities of the Russell 2000[®] Index. The iShares[®] Russell 2000 Index Fund may invest the remainder of its assets in securities not included in the Russell 2000[®] Index, but which BFA believes will help the iShares[®] Russell 2000 Index Fund track the Russell 2000[®] Index. The iShares[®] Russell 2000 Index Fund also may invest its other assets in futures contracts, options on futures contracts, options and swaps, as well as cash and cash equivalents, including shares of money market funds affiliated with BFA or its affiliates.

Representative Sampling

The iShares[®] Russell 2000 Index Fund pursues a “representative sampling” strategy in attempting to track the performance of the Russell 2000[®] Index. The iShares[®] Russell 2000 Index Fund invests in a representative sample of securities in the Russell 2000[®] Index that collectively has an investment profile similar to the Russell 2000[®] Index. The securities selected are expected to have, in the aggregate, investment characteristics (based on factors such as market capitalization and industry weightings), fundamental characteristics (such as return variability and yield) and liquidity measures similar to those of the Russell 2000[®] Index. The iShares[®] Russell 2000 Index Fund may or may not hold all of the securities that are included in the Russell 2000[®] Index.

Correlation

The Russell 2000[®] Index is a theoretical financial calculation, while the iShares[®] Russell 2000 Index Fund is an actual investment portfolio. The performance of the iShares[®] Russell 2000 Index Fund and the Russell 2000[®] Index may vary due to transaction costs, non-U.S. currency valuation, asset valuations, corporate actions (such as mergers and spin-offs), timing variances and differences between the iShares[®] Russell 2000 Index Fund’s portfolio and the Russell 2000[®] Index resulting from legal restrictions (such as diversification requirements) that apply to the iShares[®] Russell

2000 Index Fund but not to the Russell 2000[®] Index or due to the use of representative sampling. “Tracking error” is the difference between the performance (return) of the iShares[®] Russell 2000 Index Fund’s portfolio and that of the Russell 2000[®] Index. BFA expects that, over time, the iShares[®] Russell 2000 Index Fund’s tracking error will not exceed 5%. Because the fund uses a representative sampling indexing strategy, it can be expected to have a greater tracking error than if it used a replication indexing strategy. “Replication” is an indexing strategy in which a fund invests in substantially all of the securities in its underlying index in approximately the same proportions as in the underlying index.

Industry Concentration Policy

The iShares[®] Russell 2000 Index Fund will concentrate its investments (*i.e.*, hold 25% or more of its total assets) in a particular industry or group of industries to approximately the same extent that the Russell 2000[®] Index is concentrated. For purposes of this limitation, securities of the U.S. government (including its agencies and instrumentalities) and repurchase agreements collateralized by U.S. government securities are not considered to be issued by members of any industry.

Holdings Information

As of June 21, 2012, 99.61% of the iShares[®] Russell 2000 Index Fund’s holdings consisted of equity securities, 0.19% consisted of cash and 0.20% consisted of other assets, including dividends booked but not yet received. The following tables summarize the iShares[®] Russell 2000 Index Fund’s top holdings in individual companies and by sector as of such date.

Top holdings in individual securities as of June 21, 2012

Company	Percentage of Total Holdings
Onyx Pharmaceuticals, Inc.	0.36%
Kilroy Realty Corporation	0.28%
American Campus Communities	0.28%
Salix Pharmaceuticals, Ltd.	0.27%
Extra Space Storage, Inc.	0.27%
Concur Technologies, Inc.	0.26%
Jack Henry & Associates, Inc.	0.25%
Home Properties Inc.	0.25%
ARIAD Pharmaceuticals, Inc.	0.25%
National Retail Properties, Inc.	0.25%

Top holdings by sector as of June 21, 2012

Sector	Percentage of Total Holdings
Financial Services	24.50%
Consumer Discretionary	14.82%
Producer Durables	13.95%
Health Care	13.66%
Technology	13.48%
Materials & Processing	6.63%
Energy	5.06%
Utilities	4.28%

Sector	Percentage of Total Holdings
Consumer Staples	3.23%
S-T Securities	0.19%

The Russell 2000[®] Index

All information contained in this index supplement regarding the Russell 2000[®] Index, including, without limitation, its make-up, method of calculation and changes in its components, from publicly available information, without independent verification. This information reflects the policies of, and is subject to change by, Russell Investments (“**Russell**”). The Russell 2000[®] Index was developed by Russell Investment Group (formerly, Frank Russell Company) and is calculated, maintained and published by Russell, a subsidiary of Russell Investment Group. Russell has no obligation to publish, and may discontinue the publication of, the Russell 2000[®] Index. The Russell 3000E[™] Index is not the same as the Russell 3000[®] Index, which is a subset of the Russell 3000E[™] Index.

The Russell 2000[®] Index is reported by Bloomberg L.P. under the ticker symbol “RTY.”

The Russell 2000[®] Index measures the capitalization-weighted price performance of the small-cap stocks included in the Russell 2000[®] Index (the “**Component Stocks**”) and is designed to track the performance of the small capitalization segment of the U.S. equity market. All stocks included in the Russell 2000[®] Index are traded on a major U.S. exchange. The companies included in the Russell 2000[®] Index are the middle 2,000 of the companies that form the Russell 3000E[™] Index, which is composed of the 4,000 largest U.S. companies as determined by total market capitalization and represents approximately 99% of the U.S. equity market.

Selection of Stocks Underlying the Russell 2000[®] Index. The Russell 2000[®] Index is a sub-index of the Russell 3000E[™] Index. To be eligible for inclusion in the Russell 3000E[™] Index, and, consequently, the Russell 2000[®] Index, a company’s stock must be listed on the last trading day in May of a given year, and Russell must have access to documentation on that date verifying the company’s eligibility for inclusion. Eligible initial public offerings are added to Russell U.S. indices at the end of each calendar quarter, based on total market capitalization rankings within the market-adjusted capitalization breaks established during the most recent reconstitution. To be added to any Russell U.S. index during a quarter outside of reconstitution, initial public offerings must meet all Russell U.S. index eligibility requirements as well as the following criteria: on the last trading day of the month prior to quarter-end, (i) the company’s stock must price and trade and (ii) the company must rank larger in total market capitalization than the market-adjusted smallest company in the Russell 3000E[™] Index as of the most recent reconstitution.

U.S. companies are eligible for inclusion in the Russell 3000E[™] Index and, consequently, the Russell 2000[®] Index. Russell uses the following method for determining whether a company is a U.S. company. If a company incorporates in, has a stated headquarters location in, and also trades in the same country (ADRs and ADSs are not eligible), the company is assigned to its country of incorporation. If any of the three do not match, Russell then defines 3 Home Country Indicators (“**HCIs**”). The HCIs are as follows:

- country of incorporation;
- country of headquarters; and

- country of the most liquid exchange as defined by 2-year average daily dollar trading volume (“ADDTV”) from all exchanges within a country.

After the HCIs are defined, the next step in the country assignment involves an analysis of assets by location. Russell cross-compares the primary location of the company’s assets with the three HCIs. If the primary location of assets matches ANY of the HCIs, then the company is assigned to its primary asset location.

If there is not enough information to determine a company’s primary country of assets, Russell uses the primary location of the company’s revenue for the same cross-comparison and assigns the company to the appropriate country in a similar fashion. In 2011, Russell began using an average of two years of assets or revenues data for analysis to reduce potential turnover.

If conclusive country details cannot be derived from assets or revenue, Russell assigns the company to the country where its headquarters are located unless the country is a Benefit Driven Incorporation (“BDI”) country. If the country in which its headquarters are located is a BDI country, the company is assigned to the country of its most liquid stock exchange. The BDI countries are Anguilla, Antigua and Barbuda, Aruba, Bahamas, Barbados, Belize, Bermuda, Bonaire, British Virgin Islands, Cayman Islands, Channel Islands, Cook Islands, Curacao, Faroe Islands, Gibraltar, Isle of Man, Liberia, Marshall Islands, Panama, Saba, Sint Eustatius, Sint Maarten and Turks and Caicos Islands.

The following securities are specifically excluded from the Russell U.S. indices: (i) stocks that are not traded on a major U.S. exchange (Bulletin Board, Pink Sheet and over-the-counter (OTC) securities are not eligible); (ii) preferred stock, convertible preferred stock, redeemable shares, participating preferred stock, warrants, rights and trust receipts; and (iii) royalty trusts, limited liability companies, closed-end investment companies (business development companies, or “BDCs,” are eligible), blank check companies, special purpose acquisition companies (“SPACs”) and limited partnerships.

The primary criterion used to determine the initial list of securities eligible for the Russell 3000E™ Index and, consequently, the Russell 2000® Index is total market capitalization, which is defined as the total number of outstanding shares times the closing price of the shares as of the last trading day in May for those securities being considered at annual reconstitution. Initial public offering eligibility is determined each quarter. Common stock, non-restricted exchangeable shares and partnership units/membership interests (in certain cases) are used to calculate a company’s total market capitalization. Exchangeable shares are shares that may be exchanged at any time, at the holder’s option, on a one-for-one basis for common stock. Partnership units/membership interests represent an economic interest in a limited partnership or limited liability company. Russell includes partnership units/membership interests as part of total market capitalization when the company in question is a holding company whose sole asset is its partnership units/membership interests in an underlying entity. In these cases, total market capitalization will be calculated based on 100% of the value of all partnership units/membership interests. Any other form of shares—such as preferred or convertible preferred stock, redeemable shares, participating preferred stock, warrants and rights or trust receipts—is excluded from the calculation. If multiple share classes of common stock exist, they are combined. In cases where the common stock share classes act independently of each other (e.g., tracking stocks), each class is considered for inclusion separately.

During annual reconstitution, a stock’s closing price on its primary exchange on the last trading day in May is used to determine total market capitalization. If a stock does not trade on its primary exchange, the lowest price from another major U.S. exchange is used. In cases where multiple share classes have been combined, the price of the primary trading vehicle (usually the most liquid) is used in the total market capitalization calculations. Primary trading vehicles are determined by the last two years’ average trading volume, as of the last trading day in May. For new members, the common share class with the highest trading volume will be considered the primary trading vehicle, and its associated price and trading symbol will be included in the Russell U.S. indices.

Companies with only a total market capitalization of less than \$30 million are not eligible for inclusion in the Russell 3000E™ Index or, consequently, the Russell 2000® Index.

In addition, companies with only 5% or less of their shares available in the marketplace are not eligible for inclusion in the Russell 3000E™ Index or, consequently, the Russell 2000® Index. Also, stocks must have a closing price at or above \$1.00 on their primary exchange on the last trading day in May to be eligible for inclusion in the Russell 2000® Index at annual reconstitution. In order to reduce unnecessary turnover, if an existing Russell 2000®

Component Stock's closing price is less than \$1.00 on its primary exchange on the last trading day in May, it will be considered eligible if the average of the daily closing prices from its primary exchange during the month of May is equal to or greater than \$1.00. Furthermore, if a stock, new or existing, does not have a close price at or above \$1.00 on its primary exchange on the last trading day in May, but does have a close price at or above \$1.00 on another major U.S. exchange on that day, the stock will be eligible for inclusion. Quarterly initial public offering additions must have a close price at or above \$1.00 on the last day of their eligibility period in order to qualify for index inclusion.

Companies that produce unrelated business taxable income (UBTI) are restricted from ownership for tax-exempt investors. In recognition of this, Russell screens all REITs and PTPs, removing any security from eligibility that generates or has historically generated UBTI and has not taken steps to block UBTI to equity holders. The research process is conducted as part of Russell's annual rebalance effort. Additional screening will not be assessed or changed outside of the reconstitution period. Information used to confirm UBTI impact includes the following publicly available sources: 10-K, SEC Form S-3, K-1, company annual report, dividend notices and the company website.

The Russell 2000[®] Index is reconstituted annually to reflect changes in the marketplace. The list of companies is ranked based on total market capitalization as of the last trading day in May, with the actual reconstitution occurring on the last Friday in June each year, except that if the last Friday in June of any year is the 28th, 29th or 30th, reconstitution will occur on the preceding Friday. Changes in the Component Stocks are pre-announced and subject to change if any corporate activity occurs or if any new information is received prior to release.

Capitalization Adjustments. As a capitalization-weighted index, the Russell 2000[®] Index reflects changes in the capitalization, or market value, of the Component Stocks relative to the capitalization on a base date. The current Russell 2000[®] Index value is calculated by adding the market values of the Component Stocks, which are derived by multiplying the price of each stock by the number of available shares, to arrive at the available market capitalization of the 2,000 stocks. The available market capitalization is then divided by a divisor, which represents the "adjusted" capitalization of the Russell 2000[®] Index on the base date of December 31, 1986. To calculate the Russell 2000[®] Index, last sale prices will be used for exchange-traded and NASDAQ stocks. If a Component Stock is not open for trading, the most recently traded price for that security will be used in calculating the Russell 2000[®] Index. In order to provide continuity for the Russell 2000[®] Index's value, the divisor is adjusted periodically to reflect events including changes in the number of common shares outstanding for Component Stocks, company additions or deletions, corporate restructurings and other capitalization changes.

Available shares are assumed to be shares available to the public for purchase. Exclusion of capitalization held by other listed companies and large holdings of private investors (10% or more) is based on information recorded in SEC corporate filings, including DEF 14, 424B and 10K filings (but not 13F filings), or other reliable sources in the event of missing or questionable data.

The following types of shares are removed from total market capitalization to arrive at available market capitalization:

- Corporate cross-owned shares — shares of a company in the Russell 2000[®] Index held by another member of a Russell index (including Russell Global Indexes). Any percentage held in this class will be adjusted;
- Large corporate and private holdings — shares held by a listed corporation not in the Russell 2000[®] Index, by an individual or by a group of individuals acting together if the holding constitutes 10% or more of shares outstanding. However, not to be included in this class are institutional holdings, which are shares held by investment companies, partnerships, insurance companies, mutual funds, banks or venture capital firms, unless these firms have a direct relationship to the company in the Russell 2000[®] Index, in which case the holdings are considered strategic holdings and are excluded;
- ESOP or LESOP shares — shares held by an Employee Stock Ownership Plan ("ESOP") or a Leveraged Employee Stock Ownership Plan ("LESOP") that comprise 10% or more of shares outstanding;
- Unlisted share classes — classes of common stock that are not traded on a U.S. securities exchange;

- Initial public offering lock-ups — shares locked up during an initial public offering are not available to the public and will be excluded from the market value at the time the initial public offering enters the Russell 2000[®] Index; and
- Government Holdings:
 - Direct government holders — those holdings listed as “government of” are considered unavailable and will be removed entirely from available shares;
 - Indirect government holders — shares held by government investment boards and/or investment arms will be treated similarly to large private holdings and removed if the holding is greater than 10% of shares outstanding; and
 - Government pensions — any holding by a government pension plan is considered an institutional holding and will not be removed from available shares.

Corporate Actions Affecting the Russell 2000[®] Index. The Russell 2000[®] Index is adjusted in response to certain corporate actions when the actions are final. Russell determines whether a corporate action is final based on sources of public information including company press releases, SEC filings, exchange notifications and Bloomberg or other sources that Russell deems reliable. If Russell determines that an action was not final after communication was given to clients, the changes to the Russell 2000[®] Index will still occur. Prior to the completion of a corporate action, Russell estimates the effective date. Russell then adjusts the anticipated effective date based on public information until the date is considered final. Depending on the time on a given day that an action is determined to be final, Russell either (1) applies the action after the close of the current market day (t); or (2) applies the action after the close of the following day (t+1). Russell applies the following methodology guidelines when adjusting the Russell 2000[®] Index in response to corporate actions:

- “No Replacement” Rule — Securities that leave the Russell 2000[®] Index, between reconstitution dates, for any reason (e.g., mergers, acquisitions or other similar corporate activity) are not replaced. Thus, the number of securities in the Russell 2000[®] Index over a year will fluctuate according to corporate activity.
- Mergers and Acquisitions — Mergers and acquisitions result in changes to the membership and weighting of members within the Russell 2000[®] Index. In the event a merger or acquisition occurs between a member of the Russell 2000[®] Index and another member of a Russell index, the acquired company is deleted and its market capitalization moves to the acquiring company’s stock according to the terms of the merger; hence, if the merger or acquisition occurs between members of the Russell 2000[®] Index, it has no effect on the Russell 2000[®] Index’s total capitalization. Cross-ownership of the surviving entity is determined by a weighted average (by market value as of t-1) of the cross-ownership of the two previous companies. If Russell is able to determine that the action is final prior to 1:00 p.m. Eastern Standard Time on a given day, the action will be applied after the close of the current day (t). If Russell is able to determine that the action is final after 1:00 p.m. Eastern Standard Time on a given day, the action will be applied after the close of the following day (t+1). If the acquiring company is a member of the Russell 2000[®] Index but the acquired company is not a member of any Russell index, the acquiring company’s shares are adjusted at month-end. If the acquired company is a member of the Russell 2000[®] Index but the acquiring company is not a member of any Russell index, there are two possibilities:
 - Reverse Merger — If the acquiring company is a private, non-publicly traded company or OTC company, Russell will review the action to determine if it is considered a reverse merger, defined as a transaction that results in a publicly traded company that meets all requirements for inclusion in a Russell index. If it is determined that an action is a reverse merger, the newly formed entity will be placed in the appropriate market capitalization index after the close of the day following the completion of the merger (t+1), using the market-adjusted breakpoints from the most recent reconstitution. The acquired company will be removed from the current index simultaneously. Cross-ownership will be determined on the basis of the most recent SEC filings.

- Standard Action — The acquired company is deleted after the action is final. If Russell is able to determine that the action is final prior to 1:00 p.m. Eastern Standard Time on a given day, the action will be applied after the close of the current day (t). If Russell is able to determine that the action is final after 1:00 p.m. Eastern Standard Time on a given day, the action will be applied after the close of the following day (t+1).
- Reincorporations — Members of the Russell 2000[®] Index that reincorporate to another country are analyzed for country assignment during annual reconstitution, as long as they continue to trade in the United States. Members of the Russell 2000[®] Index that reincorporate to another country and no longer trade in the United States are immediately deleted from the Russell 2000[®] Index. Companies that reincorporate to the United States are assessed for membership during annual reconstitution.
- Reclassifications of Shares (Primary Vehicles) — Primary vehicles will not be assessed or changed outside of a reconstitution period unless the existing class ceases to exist. In the event of extenuating circumstances signaling a necessary primary vehicle change, proper notification will be made.
- Rights Offerings — A right offered to shareholders is reflected in the Russell 2000[®] Index only if the value of the right is at a premium to the market price. If the subscription price is at a premium to the market price, the right is reflected in the Russell 2000[®] Index at the market open on the ex-date (for both transferable and non-transferable rights). The price is adjusted to account for the value of the right, and shares are increased according to the terms of the offering. If the rate is not available by the market close on the ex-date, the changes will be applied at the end of the subscription period. If the rate becomes available on the ex-date, the changes will be delayed one day. Late notifications also will delay the price and share adjustments by one day. Russell will not apply rights issued in anticipation of a takeover event or entitlements that give shareholders the right to purchase ineligible securities such as convertible debt.
- Changes to Shares Outstanding — Changes to shares outstanding due to buybacks (including Dutch auctions), secondary offerings, merger activity with a non-Russell index member and other potential changes are updated at the end of the month (with the exception of June) in which the change is reflected in vendor-supplied updates and verified by Russell using an SEC filing. For a change in shares to occur, the cumulative change to available shares must be greater than 5%. These share changes are communicated to premier clients three trading days prior to month-end and include shares provided by the vendor and verified by Russell four days prior to month-end. The float factor determined at reconstitution is applied to the new shares issued or bought back. If any new shares issued are unavailable according to the filing, that portion will not be added to the Russell 2000[®] Index.
- Spin-offs and Initial Public Offerings — The only additions between reconstitution dates are as a result of spin-offs and initial public offerings. Spin-off companies are added to the parent company's index and capitalization tier of membership if the spin-off company is sufficiently large. To be eligible, the spun-off company must rank larger in total market capitalization than the market-adjusted smallest company in the Russell 3000E[™] Index as of the most recent reconstitution. If the spun-off company is not large enough to be added to the Russell 2000[®] Index and is not trading on a "when-issued" basis, the Russell 2000[®] Index will recognize the performance of the spin-off during its first day of trading through a synthetic price/performance of the parent company. This will allow holders one trading day to liquidate positions and replicate the Russell 2000[®] Index. If the spun-off company is not large enough to be added to the Russell 2000[®] Index but is trading on a when-issued basis, the Russell 2000[®] Index will remove the spun-off company's value by using the when-issued price. If a U.S. spin-off occurs from a Russell Global ex-U.S. Index member, the spun-off company will be placed in the parent's index and capitalization tier of the Russell Global Index. If the price of a spin-off is not available, a price will be established by first using an exchange-provided estimate or a Russell-calculated estimate if the exchange does not provide one. At the close of the first day of trading, a synthetic price/performance will be calculated to account for the actual opening price of the spin-off. This price/performance is calculated to capture the accurate performance of both the spin-off and parent for the day. Real-time calculations will reflect only the estimated performance of the two companies as actual performance is not captured until end of day.

- **Tender Offers** — A company acquired as a result of a tender offer is removed if (1) the initial tender offer has expired, (2) shareholders have validly tendered, not withdrawn, and the shares have been accepted for payment, (3) all regulatory requirements have been fulfilled and (4) the acquirer will seek to complete the acquisition via a short-form merger or by compulsorily acquiring any remaining shares outstanding. In the case where a tender offer completes and does not result in the full acquisition of the target company, Russell will make a share adjustment to the target company's shares, on a date pre-announced by Russell, in cases where the available shares have decreased by 30% or more.
- **Delisted Stocks** — When Component Stocks are deleted as a result of exchange delisting or reconstitution, the price used will be the closing primary exchange price on the day the action is final (t) or the closing OTC price on the following day (t+1). For stocks continuing to trade on the primary exchange, if Russell determines that the action is final prior to 1:00 p.m. Eastern Standard Time on a given day, the deletes will be applied after the close of the current day (t), using the last traded price. If, instead, Russell determines that the action is final after 1:00 p.m. Eastern Standard Time on a given day, the deletes will be applied after the close of the following day (t+1), using the closing OTC price. Stocks previously halted that fail to trade on the primary exchange prior to being moved to OTC will always be removed the following day (t+1) at the OTC closing price, regardless of the time of notification.
- **Bankruptcy and Voluntary Liquidations** — A company that files for a Chapter 7 liquidation bankruptcy or that files a liquidation plan will be removed from the Russell 2000[®] Index at the time of filing. A company that files for a Chapter 11 reorganization bankruptcy will remain a member of the Russell 2000[®] Index, unless the company's stock is delisted from the primary exchange, in which case normal delisting rules apply. If a company files for bankruptcy, its stock is delisted, and it can be confirmed that the stock will not trade OTC, Russell may remove the stock at a nominal price of \$0.0001.
- **Change of Company Structure** — In the event that a company changes its corporate designation from that of a Business Development Corporation, Russell will remove the member as ineligible for index inclusion and provide two-days' notice of its removal.
- **Stock Distributions** — A price adjustment for a stock distribution is applied on the ex-date of the distribution. When the distribution is a fixed amount of stock distributed on the ex-date, Russell increases the number of shares on the ex-date. When the distribution is an undetermined amount of stock based on future earnings and profits to be distributed at a future date, Russell increases the number of shares on the pay-date.
- **Dividends** — Gross dividends are included in the daily total return calculation of the Russell 2000[®] Index on the basis of their ex-dates. The ex-date is used rather than the pay-date because the marketplace price adjustment for the dividend occurs on the ex-date. Monthly, quarterly and annual total returns are calculated by compounding the reinvestment of dividends daily. The reinvestment and compounding is at the total index level, not at the security level. Stock prices are adjusted to reflect special cash dividends on the ex-date. If a dividend is payable in stock and cash and the stock rate cannot be determined by the ex-date, the dividend is treated as all cash.
- **Halted Stocks** — When a stock's trading has been halted, Russell holds the stock at its most recent closing price until trading is resumed or it is officially delisted. In addition, Russell will review stocks in two categories for removal: (1) stocks halted due to financial difficulty, debt or cash flow issues for a period longer than 40 calendar days and (2) those stocks suspended due to exchange listing rules or legal regulatory issues longer than one calendar quarter. Determination for removal will be made on a case-by-case basis and based upon reasonable likelihood of trade resumption and likelihood of residual value returned to equity holders. Should removal be deemed appropriate, it will be announced with monthly share changes and removed on month-end at zero value (though for system purposes the actual value used is \$0.0001).

Pricing of Securities Included in the Russell 2000[®] Index. Primary exchange closing prices are used in the daily Russell 2000[®] Index calculations. FT Interactive data is used as the primary source for U.S. security prices, income, and total shares outstanding.

BACKGROUND ON THE iSHARES[®] MSCI EAFE INDEX FUND

All information contained in this index supplement regarding the iShares[®] MSCI EAFE Index Fund (the “**EFA Fund**”), including, without limitation, its make-up, method of calculation and changes in its components, from publicly available information, without independent verification. This information reflects the policies of, and is subject to change by, iShares[®] Trust, BlackRock Institutional Trust Company, N.A. (“**BTC**”) and BlackRock Fund Advisors (“**BFA**”). The EFA Fund is an investment portfolio maintained and managed by iShares[®] Trust. BFA is currently the investment adviser to the EFA Fund. The EFA Fund is an exchange-traded fund (“**ETF**”) that trades on the NYSE Arca, Inc. (“**NYSE Arca**”) under the ticker symbol “**EFA**.”

iShares[®] Trust is a registered investment company that consists of numerous separate investment portfolios, including the EFA Fund. Information provided to or filed with the SEC by iShares[®] Trust pursuant to the Securities Act of 1933, as amended, and the Investment Company Act of 1940, as amended, can be located by reference to SEC file numbers 333-92935 and 811-09729, respectively, through the SEC’s website at <http://www.sec.gov>. For additional information regarding iShares[®] Trust, BFA and the EFA Fund, please see the EFA Fund’s prospectus. In addition, information about iShares[®] and the EFA Fund may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents and the iShares[®] website at www.ishares.com. Information contained in the iShares[®] website is not incorporated by reference in, and should not be considered a part of, this index supplement.

Investment Objective and Strategy

The EFA Fund seeks to provide investment results that correspond generally to the price and yield performance, before fees and expenses, of publicly traded securities in developed European, Australasian and Far Eastern markets, as measured by the MSCI EAFE[®] Index. The EFA Fund holds equity securities traded primarily in certain developed markets. The MSCI EAFE[®] Index was developed by MSCI Inc. (“**MSCI**”) as an equity benchmark for international stock performance, and is designed to measure equity market performance in certain developed markets. For more information about the MSCI EAFE[®] Index, please see “Background on the MSCI Indices” in this index supplement.

As of March 31, 2012, the EFA Fund holdings by country consisted of the following 23 developed market country indices or regions: Australia, Austria, Belgium, Denmark, Finland, France, Germany, Greece, Hong Kong, Ireland, Israel, Italy, Japan, the Netherlands, New Zealand, Norway, Portugal, Singapore, Spain, Sweden, Switzerland, the United Kingdom and the United States. In addition, as of June 21, 2012, the EFA Fund’s three largest holdings by country were the United Kingdom, Japan and Switzerland. As of such date, its three largest equity securities were Nestle S.A., HSBC Holdings plc, and Vodafone Group plc, and its three largest sectors were financials, industrials and consumer staples.

The EFA Fund uses a representative sampling indexing strategy (as described below under “Representative Sampling”) to try to track the MSCI EAFE[®] Index. The EFA Fund generally invests at least 90% of its assets in securities of the MSCI EAFE[®] Index and depository receipts representing securities of the MSCI EAFE[®] Index. In addition, the EFA Fund may invest up to 10% of its assets in securities not included in the MSCI EAFE[®] Index but which BFA believes will help the EFA Fund track the MSCI EAFE[®] Index and in futures contracts, options on futures contracts, options and swaps as well as cash and cash equivalents, including shares of money market funds advised by BFA or its affiliates.

Representative Sampling

The EFA Fund pursues a “representative sampling” indexing strategy in attempting to track the performance of the MSCI EAFE[®] Index, and generally does not hold all of the equity securities included in the MSCI EAFE[®] Index. The EFA Fund invests in a representative sample of securities that collectively has an investment profile similar to the MSCI EAFE[®] Index. Securities selected are expected to have, in the aggregate, investment characteristics (based on factors such as market capitalization and industry weightings), fundamental characteristics (such as return variability and yield) and liquidity measures similar to those of the MSCI EAFE[®] Index.

Correlation

The MSCI EAFE[®] Index is a theoretical financial calculation, while the EFA Fund is an actual investment portfolio. The performance of the EFA Fund and the MSCI EAFE[®] Index will vary due to transaction costs, foreign currency valuation, asset valuations, corporate actions (such as mergers and spin-offs), timing variances, and differences between the EFA Fund's portfolio and the MSCI EAFE[®] Index resulting from legal restrictions (such as diversification requirements) that apply to the EFA Fund but not to the MSCI EAFE[®] Index or the use of representative sampling. "Tracking error" is the difference between the performance (return) of the EFA Fund's portfolio and that of the MSCI EAFE[®] Index. BFA expects that, over time, the EFA Fund's tracking error will not exceed 5%. The EFA Fund, using a representative sampling indexing strategy, can be expected to have a greater tracking error than a fund using a replication indexing strategy. Replication is an indexing strategy in which a fund invests in substantially all of the securities in its underlying index in approximately the same proportions as in the underlying index.

Industry Concentration Policy

The EFA Fund will concentrate its investments (*i.e.*, hold 25% or more of its total assets) in a particular industry or group of industries to approximately the same extent that the MSCI EAFE[®] Index is concentrated. For purposes of this limitation, securities of the U.S. government (including its agencies and instrumentalities) and repurchase agreements collateralized by U.S. government securities are not considered to be issued by members of any industry.

Holdings Information

As of June 21, 2012, 101.33% of the EFA Fund's holdings consisted of equity securities, 0.02% consisted of cash and -1.34% was in other assets, including dividends booked but not yet received. The following tables summarize the EFA Fund's top holdings in individual companies and by sector as of June 21, 2012.

Top holdings in individual securities as of June 21, 2012

Company	Percentage of Total Holdings
Nestle S.A.	2.05%
HSBC Holdings plc	1.68%
Vodafone Group plc	1.49%
Novartis AG-Reg	1.36%
BP plc	1.31%
Royal Dutch Shell plc	1.31%
Roche Holding AG	1.28%
Glaxosmithkline plc	1.25%
Toyota Motor Corp	1.13%
BHP Billiton Limited	1.12%

Top holdings by sector as of June 21, 2012

Sector	Percentage of Total Holdings
Financials	22.82%
Industrials	12.72%
Consumer Staples	11.93%
Consumer Discretionary	10.75%

Sector	Percentage of Total Holdings
Health Care	10.18%
Materials	9.91%
Energy	8.48%
Telecommunication Services	5.59%
Information Technology	4.65%
Utilities	4.29%

BACKGROUND ON THE MSCI INDICES

All information contained in this index supplement regarding the MSCI EAFE[®] Index and the MSCI Emerging Markets Index (each, an “**MSCI Index**” and together, the “**MSCI Indices**”), including, without limitation, their make-up, method of calculation and changes in their components, from publicly available information, without independent verification. This information reflects the policies of, and is subject to change by, MSCI Inc. (“**MSCI**”). The MSCI Indices are calculated, maintained and published by MSCI. MSCI has no obligation to continue to publish, and may discontinue publication of, any of the MSCI Indices.

Transition

On March 28, 2007, MSCI announced changes to the methodology used by MSCI to calculate its Standard and Small Cap Indices. The transition of the Standard and Small Cap Indices to the MSCI Global Investable Market Indices occurred in two phases, the first completed as of November 30, 2007 and the second completed as of May 30, 2008. The current index calculation methodology used to formulate the MSCI Indices (and which is also used to formulate the MSCI Global Investable Market Indices) (the “**MSCI Global Investable Market Indices Methodology**”) was implemented as of June 1, 2008.

The MSCI EAFE[®] Index

The MSCI EAFE[®] Index is a free float-adjusted market capitalization index intended to measure the equity market performance of certain developed markets. The MSCI EAFE[®] Index is calculated daily in U.S. dollars and published in real time every 15 seconds during market trading hours. As of June 26, 2012, the MSCI EAFE[®] Index consisted of the following 23 developed market country indices or regions: Australia, Austria, Belgium, Denmark, Finland, France, Germany, Greece, Hong Kong, Ireland, Israel, Italy, Japan, the Netherlands, New Zealand, Norway, Portugal, Singapore, Spain, Sweden, Switzerland, the United Kingdom and the United States. The MSCI EAFE[®] Index is reported by Bloomberg L.P. under the ticker symbol “MXEA.”

The MSCI Emerging Markets Index

The MSCI Emerging Markets Index is a free float-adjusted market capitalization index that is designed to measure equity market performance of global emerging markets. The MSCI Emerging Markets Index is calculated daily in U.S. dollars and published in real time every 15 seconds during market trading hours. As of June 26, 2012, the MSCI Emerging Markets Index consisted of the following 20 emerging market country indices: Brazil, Chile, China, Colombia, Czech Republic, Egypt, Hungary, India, Malaysia, Mexico, Peru, Philippines, Poland, Russian Federation, South Korea, South Africa, Taiwan, Thailand and Turkey. The MSCI Emerging Markets Index is reported by Bloomberg L.P. under the ticker symbol “MXEF.”

Constructing the MSCI Global Investable Market Indices

MSCI undertakes an index construction process that involves: (i) defining the Equity Universe; (ii) determining the Market Investable Equity Universe for each market; (iii) determining market capitalization size segments for each market; (iv) applying Index Continuity Rules for the MSCI Standard Index; (v) creating style segments within each size segment within each market; and (vi) classifying securities under the Global Industry Classification Standard (the “**GICS**”).

The “**relevant market**” with respect to a single country index is equivalent to the single country, except in DM-classified countries in Europe (as described below), where all such countries are first aggregated into a single market for index construction purposes. Subsequently, individual DM Europe country indices within the MSCI Europe Index are derived from the constituents of the MSCI Europe Index under the MSCI Global Investable Market Indices Methodology.

The “**relevant market**” with respect to a composite index includes each of the single countries which comprise the composite index.

The “**Global Investable Equity Universe**” is the aggregation of all Market Investable Equity Universes. The “**DM Investable Equity Universe**” is the aggregation of all the Market Investable Equity Universes for Developed Markets.

Defining the Equity Universe

(i) **Identifying Eligible Equity Securities:** The Equity Universe initially looks at securities listed in any of the countries in the MSCI Global Index Series, which will be classified as Developed Markets (“**DM**”), Emerging Markets (“**EM**”) or Frontier Markets (“**FM**”). All listed equity securities, or listed securities that exhibit characteristics of equity securities, except mutual funds, exchange traded funds, equity derivatives, limited partnerships, and most investment trusts, are eligible for inclusion in the Equity Universe. Real Estate Investment Trusts (“**REITs**”) in some countries and certain income trusts in Canada are also eligible for inclusion.

(ii) **Country Classification of Eligible Securities:** Each company and its securities (*i.e.*, share classes) are classified in one and only one country, which allows for a distinctive sorting of each company by its respective country.

Determining the Market Investable Equity Universes

A Market Investable Equity Universe for a market is derived by applying investability screens to individual companies and securities in the Equity Universe that are classified in that market. A market is equivalent to a single country, except in DM Europe, where all DM countries in Europe are aggregated into a single market for index construction purposes. Subsequently, individual DM Europe country indices within the MSCI Europe Index are derived from the constituents of the MSCI Europe Index under the Global Investable Market Indices methodology.

The investability screens used to determine the Investable Equity Universe in each market are as follows:

- (i) **Equity Universe Minimum Size Requirement:** This investability screen is applied at the company level. In order to be included in a Market Investable Equity Universe, a company must have the required minimum full market capitalization. A company will meet this requirement if its cumulative free float-adjusted market capitalization is within the top 99% of the Equity Universe sorted in descending order by full market capitalization.
- (ii) **Equity Universe Minimum Float-Adjusted Market Capitalization Requirement:** This investability screen is applied at the individual security level. To be eligible for inclusion in a Market Investable Equity Universe, a security must have a free float-adjusted market capitalization equal to or higher than 50% of the Equity Universe Minimum Size Requirement.
- (iii) **DM and EM Minimum Liquidity Requirement:** This investability screen is applied at the individual security level. To be eligible for inclusion in a Market Investable Equity Universe, a security must have adequate liquidity as measured by the Annualized Traded Value Ratio (“**ATVR**”) and the Frequency of Trading. The ATVR screens out extreme daily trading volumes, taking into account the free float-adjusted market capitalization size of securities. The aim of the 12-month and 3-month ATVR together with 3-month Frequency of Trading is to select securities with a sound long and short-term liquidity. A minimum liquidity level of 20% of 3-month ATVR and 90% of 3-month Frequency of Trading over the last 4 consecutive quarters, as well as 20% of 12-month ATVR are required for the inclusion of a security in a Market Investable Equity Universe of a Developed Market. A minimum liquidity level of 15% of 3-month ATVR and 80% of 3-month Frequency of Trading over the last 4 consecutive quarters, as well as 15% of 12-month ATVR are required for the inclusion of a security in a Market Investable Equity Universe of an Emerging Market.

In instances when a security does not meet the above criteria, the security will be represented by a relevant liquid eligible Depository Receipt if it is trading in the same geographical region. Depository Receipts are deemed liquid if they meet all the above mentioned criteria for 12-month ATVR, 3-month ATVR and 3-month Frequency of Trading.

- (iv) **Global Minimum Foreign Inclusion Factor Requirement:** This investability screen is applied at the individual security level. To be eligible for inclusion in a Market Investable Equity Universe, a security’s Foreign Inclusion Factor (“**FIF**”) must reach a certain threshold. The FIF of a security is defined as the proportion of shares outstanding that is available for purchase in the public equity markets by international investors. This proportion accounts for the available free float of and/or the foreign ownership limits applicable to a specific

security (or company). In general, a security must have an FIF equal to or larger than 0.15 to be eligible for inclusion in a Market Investable Equity Universe.

- (v) **The Minimum Length of Trading Requirement:** This investability screen is applied at the individual security level. For an initial public offering (“IPO”) to be eligible for inclusion in a Market Investable Equity Universe, the new issue must have started trading at least four months before the implementation of the initial construction of the index or at least three months before the implementation of a semi-annual index review. This requirement is applicable to small new issues in all markets. Large IPOs are not subject to the Minimum Length of Trading Requirement and may be included in a Market Investable Equity Universe and the Standard Index outside of a Quarterly or semi-annual index review.

Defining Market Capitalization Size Segments for Each Market

Once a Market Investable Equity Universe is defined, it is segmented into the following size-based indices:

- Investable Market Index (Large + Mid + Small)
- Standard Index (Large + Mid)
- Large Cap Index
- Mid Cap Index
- Small Cap Index

Creating the Size Segment Indices in each market involves the following steps: (i) defining the Market Coverage Target Range for each size segment; (ii) determining the Global Minimum Size Range for each size segment; (iii) determining the Market Size-Segment Cutoffs and associated Segment Number of Companies; (iv) assigning companies to the size segments; and (v) applying final size-segment investability requirements and index continuity rules.

Index Continuity Rules for the Standard Indices

In order to achieve index continuity, as well as provide some basic level of diversification within a market index, notwithstanding the effect of other index construction rules, a minimum number of five constituents will be maintained for a DM Standard Index and a minimum number of three constituents will be maintained for an EM Standard Index.

If after the application of the index construction methodology, a Standard Index contains fewer than five securities in a Developed Market or three securities in an Emerging Market, then the largest securities by free float-adjusted market capitalization are added to the Standard Index in order to reach five constituents in that Developed Market or three in that Emerging Market. At subsequent index reviews, if the free float-adjusted market capitalization of a non-index constituent is at least 1.50 times the free float-adjusted market capitalization of the smallest existing constituent after rebalancing, the larger free float-adjusted market capitalization security replaces the smaller one.

Creating Style Indices within Each Size Segment

All securities in the investable equity universe are classified into Value or Growth segments using the MSCI Global Value and Growth methodology.

Classifying Securities under the Global Industry Classification Standard

All securities in the Global Investable Equity Universe are assigned to the industry that best describes their business activities. To this end, MSCI has designed, in conjunction with Standard & Poor’s, the Global Industry Classification Standard (“GICS”). The GICS entails four levels of classification: (1) sector; (2) industry groups; (3) industries; (4) sub-industries. Under the GICS, each company is assigned uniquely to one sub-industry according to its principal business activity. Therefore, a company can belong to only one industry grouping at each of the four levels of the GICS.

Maintenance of the MSCI Global Investable Market Indices

The MSCI Global Investable Market Indices are maintained with the objective of reflecting the evolution of the underlying equity markets and segments on a timely basis, while seeking to achieve index continuity, continuous investability of constituents and replicability of the indices, and index stability and low index turnover.

In particular, index maintenance involves:

- (i) semi-annual index reviews (“SAIRs”) in May and November of the Size Segment and Global Value and Growth Indices, which include:
 - updating the indices on the basis of a fully refreshed Equity Universe;
 - taking buffer rules into consideration for migration of securities across size and style segments; and
 - updating FIFs and Number of Shares (“NOS”).

The objective of the SAIRs is to systematically reassess the various dimensions of the Equity Universe for all markets on a fixed semi-annual timetable. A SAIR involves a comprehensive review of the Size Segment and Global Value and Growth Indices.

- (ii) quarterly index reviews (“QIRs”) in February and August of the Size Segment Indices aimed at:
 - including significant new eligible securities (such as IPOs that were not eligible for earlier inclusion) in the index;
 - allowing for significant moves of companies within the Size Segment Indices, using wider buffers than in the SAIR; and
 - reflecting the impact of significant market events on FIFs and updating NOS.

QIRs are designed to ensure that the indices continue to be an accurate reflection of the evolving equity marketplace. This is achieved by a timely reflection of significant market driven changes that were not captured in the index at the time of their actual occurrence but are significant enough to be reflected before the next SAIR. QIRs may result in additions or deletions due to migration to another Size Segment Index, and changes in FIFs and in NOS. Only additions of significant new investable companies are considered, and only for the Standard Index. The buffer zones used to manage the migration of companies from one segment to another are wider than those used in the SAIR. The style classification is reviewed only for companies that are reassigned to a different size segment.

- (iii) Ongoing event-related changes. Ongoing event-related changes to the indices are the result of mergers, acquisitions, spin-offs, bankruptcies, reorganizations and other similar corporate events. They can also result from capital reorganizations in the form of rights issues, bonus issues, public placements and other similar corporate actions that take place on a continuing basis. These changes generally are reflected in the indices at the time of the event. Significantly large IPOs are included in the indices after the close of the company’s tenth day of trading.

Announcement Policy

The results of the SAIRs are announced at least two weeks in advance of their effective implementation dates as of the close of the last business day of May and November. The results of the QIRs are announced at least two weeks in advance of their effective implementation dates as of the close of the last business day of February and August. All changes resulting from corporate events are announced prior to their implementation.

The changes are typically announced at least ten business days prior to the changes becoming effective in the indices as an “expected” announcement, or as an “undetermined” announcement, when the effective dates are not known yet or when aspects of the event are uncertain. MSCI sends “confirmed” announcements at least two business days prior to events becoming effective in the indices, provided that all necessary public information concerning the

event is available. The full list of all new and pending changes is delivered to clients on a daily basis, between 5:30 p.m. and 6 p.m., US Eastern Time through the Advance Corporate Events (ACE) File.

In exceptional cases, events are announced during market hours for same or next day implementation. Announcements made by MSCI during market hours are usually linked to late company disclosure of corporate events or unexpected changes to previously announced corporate events.

In the case of secondary offerings representing more than 5% of a security's number of shares for existing constituents, these changes will be announced prior to the end of the subscription period when possible and a subsequent announcement confirming the details of the event (including the date of implementation) will be made as soon as the results are available.

Both primary equity offerings and secondary offerings for U.S. securities, representing at least 5% of the security's number of shares, will be confirmed through an announcement during market hours for next day or shortly after implementation, as the completion of the events cannot be confirmed prior to the notification of the pricing.

Early deletions of constituents due to bankruptcy or other significant cases are announced as soon as practicable prior to their implementation.

Index Calculation

Price Index Level

The MSCI Indices are calculated using the Laspeyres' concept of a weighted arithmetic average together with the concept of chain-linking. As a general principle, today's index level is obtained by applying the change in the market performance to the previous period index level.

$$PriceIndexLevelUSD_t = PriceIndexLevelUSD_{t-1} \times \frac{IndexAdjustedMarketCapUSD_t}{IndexInitialMarketCapUSD_t}$$

$$PriceIndexLevelLocal_t = PriceIndexLevelLocal_{t-1} \times \frac{IndexAdjustedMarketCapForLocal_t}{IndexInitialMarketCapUSD_t}$$

Where:

- $PriceIndexLevelUSD_{t-1}$ is the Price Index level in USD at time t-1.
- $IndexAdjustedMarketCapUSD_t$ is the Adjusted Market Capitalization of the index in USD at time t.
- $IndexInitialMarketCapUSD_t$ is the Initial Market Capitalization of the index in USD at time t.
- $PriceIndexLevelLocal_{t-1}$ is the Price Index level in local currency at time t-1.
- $IndexAdjustedMarketCapForLocal_t$ is the Adjusted Market Capitalization of the index in USD converted using FX rate as of t-1 and used for local currency index at time t.

Note: $IndexInitialMarketCapUSD$ was previously called $IndexUnadjustedMarketCapPreviousUSD$

Security Price Index Level

$$SecurityPriceIndexLevel_t = SecurityPriceIndexLevel_{t-1} \times \frac{SecurityAdjustedMarketCapForLocal_t}{SecurityInitialMarketCapUSD_t}$$

$SecurityAdjustedMarketCapForLocal_t =$

$$\frac{EndOfDayNumberOfShares_{t-1} \times PricePerShare_t \times InclusionFactor_t \times PAF_t}{FXrate_{t-1}} \times \frac{ICI_t}{ICI_{t-1}}$$

$$SecurityInitialMarketCapUSD_t = \frac{EndOfDayNumberOfShares_{t-1} \times PricePerShare_{t-1} \times InclusionFactor_t}{FXrate_{t-1}}$$

Where:

- *SecurityPriceIndexLevel_{t-1}* is Security Price Index level at time t-1.
- *SecurityAdjustedMarketCapForLocal_t* is the Adjusted Market Capitalization of security s in USD converted using FX rate as of t-1.
- *SecurityInitialMarketCapUSD_t* is the Initial Market Capitalization of security s in USD at time t.
- *EndOfDayNumberOfShares_{t-1}* is the number of shares of security s at the end of day t-1.
- *PricePerShare_t* is the price per share of security s at time t.
- *PricePerShare_{t-1}* is the price per share of security s at time t-1.
- *InclusionFactor_t* is the inclusion factor of security s at time t. The inclusion factor can be one or the combination of the following factors: Foreign Inclusion Factor, Domestic Inclusion Factor Growth Inclusion Factor, Value Inclusion Factor, Index Inclusion Factor.
- *PAF_t* is the Price Adjustment Factor of security s at time t.
- *FXrate_{t-1}* is the FX rate of the price currency of security s vs USD at time t-1. It is the value of 1 USD in foreign currency.
- *ICI_t* is the Internal Currency Index of price currency at time t. The ICI is different than 1 when a country changes the internal value of its currency (e.g., from Turkish Lira to New Turkish Lira – ICI = 1,000,000).
- *ICI_{t-1}* is the Internal Currency Index of price currency at time t-1.

Index Market Capitalization

IndexAdjustedMarketCapUSD_t =

$$\sum_{s \in I,t} \frac{EndOfDayNumberOfShares_{t-1} \times PricePerShare_t \times InclusionFactor_t \times PAF_t}{FXrate_t}$$

IndexAdjustedMarketCapForLocal_t =

$$\sum_{s \in I,t} \frac{EndOfDayNumberOfShares_{t-1} \times PricePerShare_t \times InclusionFactor_t \times PAF_t}{FXrate_{t-1}} \times \frac{ICI_t}{ICI_{t-1}}$$

IndexInitialMarketCapUSD_t =

$$\sum_{s \in I,t} \frac{EndOfDayNumberOfShares_{t-1} \times PricePerShare_t \times InclusionFactor_t}{FXrate_{t-1}}$$

Where:

- *EndOfDayNumberOfShares_{t-1}* is the number of shares of security s at the end of day t-1.
- *PricePerShare_t* is the price per share of security s at time t.
- *PricePerShare_{t-1}* is the price per share of security s at time t-1.
- *InclusionFactor_t* is the inclusion factor of security s at time t. The inclusion factor can be one or the combination of the following factors: Foreign Inclusion Factor, Domestic Inclusion Factor Growth Inclusion Factor, Value Inclusion Factor, Index Inclusion Factor.
- *PAF_t* is the Price Adjustment Factor of security s at time t.

- $FXrate_t$ is the FX rate of the price currency of security s vs USD at time t . It is the value of 1 USD in foreign currency.
- $FXrate_{t-1}$ is the FX rate of the price currency of security s vs USD at time $t-1$. It is the value of 1 USD in foreign currency.
- ICI_t is the Internal Currency Index of price currency at time t . The ICI is different than 1 when a country changes the internal value of its currency (e.g., from Turkish Lira to New Turkish Lira – ICI = 1,000,000).
- ICI_{t-1} is the Internal Currency Index of price currency at time $t-1$.

Corporate Events

Mergers and Acquisitions

As a general principle, MSCI implements M&As as of the close of the last trading day of the acquired entity or merging entities (last offer day for tender offers), regardless of the status of the securities (index constituents or non-index constituents) involved in the event. MSCI uses market prices for implementation. This principle applies if all necessary information is available prior to the completion of the event and if the liquidity of the relevant constituent(s) is not expected to be significantly diminished on the day of implementation. Otherwise, MSCI will determine the most appropriate implementation method and announce it prior to the changes becoming effective in the indices.

Tender Offers

In tender offers, the acquired or merging security is generally deleted from an index at the end of the initial offer period, when the offer is likely to be successful and/or if the free float of the security is likely to be substantially reduced (this rule is applicable even if the offer is extended), or once the results of the offer have been officially communicated and the offer has been successful and the security's free float has been substantially reduced, if all required information is not available in advance or if the offer's outcome is uncertain. The main factors considered by MSCI when assessing the outcome of a tender offer (not in order of importance) are: the announcement of the offer as friendly or hostile, a comparison of the offer price to the acquired security's market price, the recommendation by the acquired company's board of directors, the major shareholders' stated intention whether to tender their shares, the required level of acceptance, the existence of pending regulatory approvals, market perception of the transaction, official preliminary results if any, and other additional conditions for the offer.

In certain cases, securities may be deleted earlier than the last offer day. For example, in the case of tender offers in the United Kingdom, a security is typically deleted two business days after the offer is declared unconditional in all respects.

Increases in a security's number of shares resulting from acquisition of non-listed companies and conversion of unlisted shares are implemented at the next regularly scheduled Index Review following completion of the event.

Increases in a security's number of shares resulting from acquisition of listed non-index constituent securities representing at least 5% of the security's number of shares are generally implemented as of the close of the last trading day of the acquired entity if all necessary information is available prior to the completion of the event or if such information is not available prior to the completion of the event, as soon as practicable following the completion of the event. Changes representing less than 5% of the security's number of shares are implemented at the next regularly scheduled Index Review following the completion of the event.

If a security is deleted from an index, the security will not be reinstated immediately after its deletion even when the tender offer is subsequently declared unsuccessful and/or the free float of the security is not substantially reduced. It may be reconsidered for index inclusion at the following regularly scheduled index review.

Late Announcements of Completion of Mergers and Acquisitions

When the completion of an event is announced too late to be reflected as of the close of the last trading day of the acquired or merging entities, implementation occurs as of the close of the following day or as soon as practicable thereafter. In these cases, MSCI uses a calculated price for the acquired or merging entities. The calculated price is

determined using the terms of the transaction and the price of the acquiring or merged entity, or, if not appropriate, using the last trading day's market price of the acquired or merging entities.

Conversions of Share Classes

Conversions of a share class into another share class resulting in the deletion and/or addition of one or more classes of shares are implemented as of the close of the last trading day of the share class to be converted.

Spin-Offs

On the ex-date of a spin-off, a PAF is applied to the price of the security of the parent company. The PAF is calculated based on the terms of the transaction and the market price of the spun-off security. If the spun-off entity qualifies for inclusion, it is included as of the close of its first trading day. In cases of spin-offs of partially owned companies, the post-event free float of the spun-off entity is calculated using a weighted average of the existing shares and the spun-off shares, each at their corresponding free float. Any resulting changes to FIFs and/or DIFs are implemented as of the close of the ex-date.

In cases of spin-offs of partially-owned companies, the post-event free float of the spun-off entity is calculated using a weighted average of the existing shares and the spun-off shares, each at their corresponding free float. Any resulting changes to FIFs and/or DIFs are implemented as of the close of the ex-date.

When the spun-off security does not trade on the ex-date, a "detached" security is created to avoid a drop in the free float-adjusted market capitalization of the parent entity, regardless of whether the spun-off security is added or not. The detached security is included until the spun-off security begins trading, and is deleted thereafter. Generally, the value of the detached security is equal to the difference between the cum price and the ex price of the parent security.

Corporate Actions

Corporate actions such as splits, stock dividends and rights issues, which affect the price of a security, require a price adjustment. In general, the PAF is applied on the ex-date of the event to ensure that security prices are comparable between the ex-date and the cum date. To do so, MSCI adjusts for the value of the right and/or the value of the special assets that are distributed and the changes in number of shares and FIF, if any, are reflected as of the close of the ex-date. In general, corporate actions do not impact the free float of the securities because the distribution of new shares is carried out on a pro rata basis to all existing shareholders. Therefore, MSCI will generally not implement any pending number of shares and/or free float updates simultaneously with the event.

If a security does not trade for any reason on the ex-date of the corporate action, the event will be generally implemented on the day the security resumes trading.

Share Placements and Offerings

Changes in number of shares and FIF resulting from primary equity offerings representing at least 5% of the security's number of shares are generally implemented as of the close of the first trading day of the new shares, if all necessary information is available at that time. Otherwise, the event is implemented as soon as practicable after the relevant information is made available. A primary equity offering involves the issuance of new shares by a company. Changes in number of shares and FIF resulting from primary equity offerings representing less than 5% of the security's number of shares are deferred to the next regularly scheduled index review following the completion of the event. For public secondary offerings of existing constituents representing at least 5% of the security's number of shares, where possible, MSCI will announce these changes and reflect them shortly after the results of the subscription are known. Secondary public offerings that, given lack of sufficient notice, were not reflected immediately will be reflected at the next regularly scheduled index review. Secondary offerings involve the distribution of existing shares of current shareholders' in a listed company and are usually pre-announced by a company or by a company's shareholders and open for public subscription during a pre-determined period.

Debt-to-Equity Swaps

In general, large debt-to-equity swaps involve the conversion of debt into equity originally not convertible at the time of issue. In this case, changes in numbers of shares and subsequent FIF and/or DIF changes are implemented as of the close of the first trading day of the newly issued shares, or shortly thereafter if all necessary information is available at the time of the swap. In general, shares issued in debt-to-equity swaps are assumed to be issued to strategic investors. As such, the post event free float is calculated on a pro forma basis assuming that all these shares are non-free float. Changes in numbers of shares and subsequent FIF and/or DIF changes due to conversions of convertible bonds or other convertible instruments, including periodical conversions of preferred stocks and small debt-to-equity swaps are implemented at a following regularly scheduled index review.

Suspensions and Bankruptcies

MSCI will remove from an index as soon as practicable companies that file for bankruptcy, companies that file for protection from their creditors. MSCI will delete from an index after 40 business days of suspension securities of companies facing financial difficulties (*e.g.*, liquidity issues, debt repayment issues, companies under legal investigation, etc.) with at least two business days advance notice. Subsequently, if and when these securities resume normal trading, they may be considered as a potential addition to an index at the next scheduled semi-annual index review. Securities of companies suspended due to pending corporate events (*e.g.*, merger, acquisition, etc.), will continue to be maintained in an index until they resume trading regardless of the duration of the suspension period. When the primary exchange price is not available, MSCI will delete securities at an over the counter or equivalent market price when such a price is available and deemed relevant. If no over the counter or equivalent price is available, the security will be deleted at the smallest price (unit or fraction of the currency) at which a security can trade on a given exchange. For securities that are suspended, MSCI will carry forward the market price prior to the suspension during the suspension period.

BACKGROUND ON THE iSHARES[®] BARCLAYS 20+ YEAR TREASURY BOND FUND

All information regarding the iShares[®] Barclays 20+ Year Treasury Bond Fund (the “**20+ Treasury Fund**”) contained in this index supplement, including, without limitation, its make-up, method of calculation and changes in its components, from publicly available information, without independent verification. This information reflects the policies of, and is subject to change by, iShares[®], Inc. (“**iShares[®]**”), iShares[®] Trust, BlackRock Institutional Trust Company, N.A. (“**BTC**”) and BlackRock Fund Advisors (“**BFA**”). BFA is currently the investment advisor to the 20+ Treasury Fund and is a wholly owned subsidiary of BTC, which in turn is a wholly owned subsidiary of BlackRock, Inc. The 20+ Treasury Fund is an exchange-traded fund (“**ETF**”) that trades on the NYSE Arca, Inc. (“**NYSE Arca**”) under the ticker symbol “TLT.”

The iShares[®] Trust is a registered investment company that consists of numerous separate investment portfolios, including the 20+ Treasury Fund. Information provided to or filed with the SEC by iShares[®] Trust pursuant to the Securities Act of 1933, as amended, and the Investment Company Act of 1940, as amended, can be located by reference to SEC file numbers 333-92935 and 811-09729, respectively, through the SEC’s website at <http://www.sec.gov>. For additional information regarding the 20+ Treasury Fund, please see the 20+ Treasury Fund’s prospectus. In addition, information about iShares[®] and the 20+ Treasury Fund may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents and the iShares[®] website at www.ishares.com. Information contained in the iShares[®] website is not incorporated by reference in, and should not be considered a part of, this index supplement.

Investment Objective and Strategy

The 20+ Treasury Fund seeks to provide investment results that correspond generally to the price and yield performance, before fees and expenses, of the long-term sector of the United States Treasury market as defined by the Barclays Capital U.S. 20+ Year Treasury Bond Index (the “**20+ Treasury Index**”).

BFA uses a “passive” or indexing approach to try to achieve the investment objective of the 20+ Treasury Fund. The 20+ Treasury Fund does not try to “beat” the index it tracks and does not seek temporary defensive positions when markets decline or appear overvalued. The 20+ Treasury Fund uses a representative sampling indexing strategy (as described below under “Representative Sampling”) to try to track the 20+ Treasury Index.

The 20+ Treasury Fund may or may not hold all of the securities in the 20+ Treasury Index. The 20+ Treasury Fund generally invests at least 90% of its assets in the bonds included in the 20+ Treasury Index and at least 95% of its assets in U.S. government bonds. The 20+ Treasury Fund may invest up to 10% of its assets in U.S. government bonds not included in the 20+ Treasury Index, but which BFA believes will help the 20+ Treasury Fund track the 20+ Treasury Index. The 20+ Treasury Fund also may invest up to 5% of its assets in repurchase agreements collateralized by U.S. government obligations and in cash and cash equivalents, including shares of money market funds advised by BFA. The 20+ Treasury Fund may lend securities representing up to one-third of the value of the 20+ Treasury Fund’s total assets (including the value of the collateral received).

Representative Sampling

Representative sampling is an indexing strategy that involves investing in a representative sample of securities that collectively has an investment profile similar to the 20+ Treasury Index. The securities selected are expected to have, in the aggregate, investment characteristics (based on factors such as market capitalization and industry weightings), fundamental characteristics (such as return variability, duration, maturity or credit ratings and yield) and liquidity measures similar to those of the 20+ Treasury Index.

Correlation

The 20+ Treasury Index is a theoretical financial calculation while the 20+ Treasury Fund is an actual investment portfolio. The performance of the 20+ Treasury Fund and the 20+ Treasury Index may vary due to transaction costs, non-U.S. currency valuation, asset valuations, corporate actions (such as mergers and spin-offs), timing variances and differences between the portfolio of the 20+ Treasury Fund and that of the 20+ Treasury Index resulting from legal restrictions (such as diversification requirements) that apply to the 20+ Treasury Fund but not to the 20+ Treasury Index or to the use of representative sampling. “Tracking error” is the difference between the performance (return) of the

portfolio of the 20+ Treasury Fund and that of the 20+ Treasury Index. BFA expects that, over time, the 20+ Treasury Fund's tracking error will not exceed 5%. Because the 20+ Treasury Fund uses a representative sampling indexing strategy, it can be expected to have a larger tracking error than if it used a replication indexing strategy. "Replication" is an indexing strategy in which a fund invests in substantially all of the securities in its underlying index in approximately the same proportions as in the underlying index.

Industry Concentration Policy

The 20+ Treasury Fund will concentrate its investments (*i.e.*, hold 25% or more of its total assets) in a particular industry or group of industries to approximately the same extent that the 20+ Treasury Index is concentrated. For purposes of this limitation, securities of the U.S. government (including its agencies and instrumentalities), repurchase agreements collateralized by U.S. government securities and securities of state or municipal governments and their political subdivisions are not considered to be issued by members of any industry.

Holdings Information

The holding information for the 20+ Treasury Fund is updated on a daily basis. As of June 21, 2012, 99.29% of the 20+ Treasury Fund's holdings consisted of bonds, 0.01% consisted of cash and 0.71% was in other assets, including dividends booked but not yet received. The following tables summarize the top 10 holdings of the 20+ Treasury Fund as of such date.

Top 10 Holdings as of June 21, 2012

Security	Percentage of Total Holdings
U.S. Treasury Bonds, 05/15/2041, 4.38%	8.56%
U.S. Treasury Bonds, 02/15/2040, 4.62%	8.32%
U.S. Treasury Bonds, 11/15/2040, 4.25%	8.25%
U.S. Treasury Bonds, 05/15/2040, 4.38%	8.08%
U.S. Treasury Bonds, 02/15/2041, 4.75%	8.06%
U.S. Treasury Bonds, 11/15/2039, 4.38%	7.88%
U.S. Treasury Bonds, 08/15/2040, 3.88%	7.86%
U.S. Treasury Bonds, 08/15/2041, 3.75%	7.76%
U.S. Treasury Bonds, 08/15/2039, 4.50%	5.98%
U.S. Treasury Bonds, 05/15/2039, 4.25%	5.65%

The Barclays Capital U.S. 20+ Year Treasury Bond Index

All information contained in this index supplement regarding the Barclays Capital U.S. 20+ Year Treasury Bond Index, including, without limitation, its make-up, method of calculation and changes in its components, from publicly available information. This information reflects the policies of, and is subject to change by, Barclays Capital Inc. ("BCI"). The Barclays Capital U.S. 20+ Year Treasury Bond Index is calculated, maintained and published by BCI. BCI is under no obligation to continue to publish, and may discontinue publication of, the Barclays Capital U.S. 20+ Year Treasury Bond Index.

The Barclays Capital U.S. 20+ Year Treasury Bond Index measures the performance of public obligations of the U.S. Treasury. The Barclays Capital U.S. 20+ Year Treasury Bond Index is market capitalization weighted, includes all publicly issued U.S. Treasury securities that meet the criteria for inclusion and is rebalanced once a month on the last calendar day of the month. The U.S. Treasury securities included in the Barclays Capital U.S. 20+ Year Treasury Bond Index must have a remaining maturity of greater than 20 years, are rated investment grade (at least Baa3 by Moody's Investors Service, Inc. or BBB- by Standard and Poor's Financial Services, LLC) and have \$250 million or more of outstanding face value. In addition, the securities must be denominated in U.S. dollars and must be fixed-rate and non-convertible. Certain special issuances, such as state and local government series bonds ("SLGs") and coupon issues that have been stripped from assets already included, are excluded from the Barclays Capital U.S. 20+ Year Treasury Bond Index.

BACKGROUND ON THE iSHARES[®] iBOXX \$ INVESTMENT GRADE CORPORATE BOND FUND

All information regarding the iShares[®] iBoxx \$ Investment Grade Corporate Bond Fund (the “**Investment Grade Bond Fund**”) contained in this index supplement, including, without limitation, its make-up, method of calculation and changes in its components, from publicly available information, without independent verification. This information reflects the policies of, and is subject to change by, iShares[®], Inc. (“iShares[®]”), iShares[®] Trust, BlackRock Institutional Trust Company, N.A. (“BTC”) and BlackRock Fund Advisors (“BFA”). BFA is currently the investment adviser to the Investment Grade Bond Fund and is a wholly owned subsidiary of BTC, which in turn is a wholly owned subsidiary of BlackRock, Inc. The Investment Grade Bond Fund is an exchange-traded fund (“ETF”) that trades on the NYSE Arca, Inc. (“NYSE Arca”) under the ticker symbol “LQD.”

iShares[®] Trust is a registered investment company that consists of numerous separate investment portfolios, including the Investment Grade Bond Fund. Information provided to or filed with the SEC by iShares[®] pursuant to the Securities Act of 1933, as amended, and the Investment Company Act of 1940, as amended, can be located by reference to SEC file numbers 333-92935 and 811-09729, respectively, through the SEC’s website at <http://www.sec.gov>. For additional information regarding iShares[®] Trust, BFA and the Investment Grade Bond Fund, please see the Investment Grade Bond Fund’s prospectus. In addition, information about iShares[®] and the Investment Grade Bond Fund may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents and then iShares[®] website at www.ishares.com. Information contained in the iShares[®] website is not incorporated by reference in, and should not be considered part of, this index supplement.

Investment Objective and Strategy

The Investment Grade Bond Fund seeks to provide investment results that correspond generally to the price and yield performance, before fees and expenses, of a segment of the U.S. investment grade corporate bond market as defined by the iBoxx[®] \$ Liquid Investment Grade Index (the “**Investment Grade Bond Index**”).

BFA uses a “passive” or indexing approach to try to achieve the investment objective of the Investment Grade Bond Fund. The Investment Grade Bond Fund does not try to “beat” the index it tracks and does not seek temporary defensive positions when markets decline or appear overvalued. The Investment Grade Bond Fund uses a representative sampling indexing strategy (as described below under “— Representative Sampling”) to try to track the Investment Grade Bond Index.

The Investment Grade Bond Fund may or may not hold all of the securities in the Investment Grade Bond Index. The Investment Grade Bond Fund generally invests at least 90% of its assets in securities of the Investment Grade Bond Index and at least 95% of its assets in investment grade corporate bonds. The Investment Grade Bond Fund also may invest in bonds not included in the Investment Grade Bond Index, but which BFA believes will help the Investment Grade Bond Fund track the Investment Grade Bond Index. The Investment Grade Bond Fund may invest up to 5% of its assets in repurchase agreements collateralized by U.S. government obligations and in cash and cash equivalents, including shares of money market funds advised by BFA.

Representative Sampling

Representative sampling involves investing in a representative sample of securities that collectively has an investment profile similar to the Investment Grade Bond Index. The securities selected are expected to have, in the aggregate, investment characteristics (based on factors such as market capitalization and industry weightings), fundamental characteristics (such as return variability, duration, maturity or credit ratings and yield) and liquidity measures similar to those of the Investment Grade Bond Index.

Correlation

The Investment Grade Bond Index is a theoretical financial calculation while the Investment Grade Bond Fund is an actual investment portfolio. The performance of the Investment Grade Bond Fund and the Investment Grade Bond Index may vary due to transaction costs, non-U.S. currency valuation, asset valuations, corporate actions (such as mergers and spin-offs), timing variances and differences between the Investment Grade Bond Fund’s portfolio and the Investment Grade Bond Index resulting from legal restrictions (such as diversification requirements) that apply to the Investment Grade Bond Fund but not to the Investment Grade Bond Index or to the use of representative sampling.

“Tracking error” is the difference between the performance (return) of the Investment Grade Bond Fund’s portfolio and that of the Investment Grade Bond Index. BFA expects that, over time, the Investment Grade Bond Fund’s tracking error will not exceed 5%. Because the Fund uses a representative sampling indexing strategy, it can be expected to have a larger tracking error than if it used a replication indexing strategy. “Replication” is an indexing strategy in which a fund invests in substantially all of the securities in its underlying index in approximately the same proportions as in the underlying index.

Industry Concentration Policy

The Investment Grade Bond Fund will concentrate its investments (*i.e.*, hold 25% or more of its total assets) in a particular industry or group of industries to approximately the same extent that the Investment Grade Bond Index is concentrated. For purposes of this limitation, securities of the U.S. government (including its agencies and instrumentalities), repurchase agreements collateralized by U.S. government securities and securities of state or municipal governments and their political subdivisions are not considered to be issued by members of any industry.

Holdings Information

The holding information for the Investment Grade Bond Fund is updated on a daily basis. As of June 21, 2012, 98.43% of the Fund’s holdings consisted of bonds, 0.35% consisted of cash and 1.22% was in other assets, including dividends booked but not yet received. The following tables summarize the top 10 holdings of the Investment Grade Bond Fund as of such date.

Top 10 Holdings as of June 21, 2012

Security	Percentage of Total Holdings
AT&T Inc. (maturing 2018)	0.52%
AT&T Inc. (maturing 2039)	0.52%
Wells Fargo & Company	0.52%
Wal-Mart Stores Inc.	0.50%
General Electric Capital Corp. (maturing 2038)	0.48%
American International Group Inc.	0.47%
Credit Suisse New York, NY	0.46%
Citigroup Inc.	0.44%
JPMorgan Chase & Co.	0.43%
Verizon Communications Inc.	0.43%

Disclaimer

The ETF Efficiente Index is not sponsored, endorsed, sold or promoted by BTC. BTC makes no representations or warranties to any member of the public regarding the advisability of investing in the ETF Efficiente Index. BTC has no obligation or liability in connection with the operation, marketing, trading or sale of the ETF Efficiente Index.

The iBoxx® \$ Liquid Investment Grade Index

All information contained in this index supplement regarding the IG Index, including, without limitation, its make-up, method of calculation and changes in its components, from publicly available information, without independent verification. That information reflects the policies of, and is subject to change by, Markit Group Limited (“Markit”).

The IG Index is calculated, maintained and published by Markit. Markit has no obligation to continue to calculate and publish, and may discontinue calculation and publication of, the IG Index.

The IG Index is reported by Bloomberg L.P. under the ticker symbol “IBOXIG.”

The IG Index is designed to reflect the performance of the U.S. dollar investment-grade corporate bond market. The IG Index is market-value weighted concept with an issuer cap of 3%.

The IG Index consists of investment grade U.S. dollar-denominated bonds issued by corporate issuers from developed countries and rated by at least one of three rating services: Fitch Ratings, Moody’s Investor Service and Standard & Poor’s Rating Services. The IG Index composition is rebalanced once a month, after the close of business on the last day of each month (the “**rebalancing date**”). The new IG Index composition becomes effective on the first business day of the next month (the “**composition month**”).

The bonds in the IG Index must meet all the criteria described below as of the close of business three business days prior to the rebalancing date, *provided* that the relevant bond data can be verified, at Markit’s sole discretion, as of such date (the “**Bond Selection Cut-off Date**”).

The IG Index is multi-contributor priced. Prices for the bonds in the IG Index are sourced from a number of leading market makers. The received quotes are subject to a quality control process which is intended to exclude stale or off-market prices, and the quotes that pass the quality control are consolidated to the IG Index price. Additionally, the IG Index rules and their application are governed by two committees:

- **Technical Committee:** composed of representatives of the price contributing market makers and banks. The Technical Committee meets once a month in order to arbitrate monthly rebalancing, and to monitor market developments. It also provides assistance in the identification of eligible constituents, especially in the instance where the eligibility or the classification of a bond is unclear or contentious. Additionally, the Technical Committee discusses any market developments which may warrant index rule changes, provides recommendations on changes to the rules, and reviews whether a country should be deemed ineligible due to financial sanctions.
- **Oversight Committee:** composed of representatives from a broad range of asset managers. The purpose of the oversight Committee is to review the recommendations and decisions of the Technical Committee and also to provide consultation and approval on any market developments which may warrant rule changes.

Selection Criteria for the iBoxx[®] \$ Liquid Investment Grade Index

The following selection criteria are applied to select the constituents for the IG Index: bond type, credit rating, time to maturity, amount outstanding, classification, lockout period and minimum run.

Bond Type. Only fixed-rate bonds whose cash flow can be determined in advance are eligible for the IG Index. The IG Index is comprised solely of bonds. Treasury Bills and other money market instruments are not eligible. The IG Index includes only U.S. dollar-denominated bonds.

In particular, bonds with the following characteristics are included: fixed coupon bonds, step-up bonds with coupon schedules known at issuance (or as functions of the issuer’s rating), sinking funds and amortizing bonds, medium-term notes, callable bonds and puttable bonds.

The following instrument types are specifically excluded from the Index: preferred shares, optionally and mandatorily convertible bonds, subordinated bank debt or insurance debt with mandatory contingent conversion features or with any conversion options before the first call date, bonds with other equity features attached (*e.g.*, options/warrants), private placements, perpetual bonds, floating rate notes, pay-in-kind bonds (during the pay-in-kind period), zero coupon bonds, zero step-ups (GAINS) and bonds with differences between accrual and coupon payment periods and monthly-paying bonds.

Any bond subject to a firm call or tender offer in the month immediately following the rebalancing date will be excluded from the IG Index, *provided* that Markit is aware of that tender offer or call as of the Bond Selection Cut-off Date.

Credit Rating. All bonds in the IG Index must have a Markit iBoxx Rating of investment grade. Ratings from the following three credit rating agencies are considered for the calculation of the Markit iBoxx Rating: Fitch Ratings (“**Fitch**”), Moody’s Investor Service (“**Moody’s**”) and Standard & Poor’s Rating Services (“**S&P**”). Investment grade is defined to be BBB- or above from Fitch or S&P and Baa3 or above from Moody’s. If a bond is rated by more than one of the foregoing agencies, then the Markit iBoxx Rating is the average of the provided ratings. The rating is consolidated to the nearest rating grade. Rating notches are not used. In case of an ID change or exchange of a Rule 144A/Regulation S offering into a registered bond the ratings from the Rule 144A/Regulation S offering are also used for the registered bond.

Time to Maturity. To qualify for entry in the IG Index, bonds must have at least three years and six months remaining time to maturity. Bonds in the IG Index must have maturities of at least three years at the rebalancing date.

Amount Outstanding. The outstanding face value of all bonds denominated in U.S. dollars from the issuer must be greater than or equal to \$2 billion as of the Bond Selection Cut-off Date. The outstanding face value of a bond must be greater than or equal to \$750 million as of the Bond Selection Cut-off Date. Partial buybacks or increases will affect the outstanding face value of a prospective bond. Markit considers changes to the outstanding face value of a candidate bond as a result of partial or full buybacks or increases, *provided* that Markit is aware of such changes as of the Bond Selection Cut-off Date.

Bond Classification. The bond must be corporate credit, *i.e.*, debt instruments backed by corporate issuers that are not secured by specific assets. Debt issued by governments, sovereigns, quasi-sovereigns and government-backed or guaranteed entities is excluded.

Bonds must be denominated in U.S. dollars, publicly registered in the United States with the SEC and clear and settle through The Depository Trust Company. Eurobonds are excluded.

Bonds from countries classified as developed markets based on the “Markit Global Economic Development Classification” are eligible for the IG Index. As of March 2012, the issuer or, in the case of a finance subsidiary, the issuer’s guarantor, must be domiciled and the country of risk must be in Andorra, Australia, Austria, Belgium, Bermuda, Canada, Cayman Islands, Cyprus, Denmark, Faeroe Islands, Finland, France, Germany, Gibraltar, Greece, Hong Kong, Iceland, Ireland, Italy, Japan, Liechtenstein, Luxembourg, Malta, Monaco, Netherlands, New Zealand, Norway, Portugal, San Marino, Singapore, Spain, Sweden, Switzerland, United States or the United Kingdom in order to be eligible for inclusion in the IG Index. A new country is added to the IG Index if it is classified as a developed market based on the “Markit Global Economic Development Classification”. A country is no longer eligible for the IG Index if it is classified as an emerging market based on the “Markit Global Economic Development Classification”. The “Markit Global Economic Development Classification” is updated once per year. The results are published at the end of July. The inclusion or exclusion of a country becomes effective at the end of the October following that publication.

Lockout Period. A bond that drops out of the IG Index at the rebalancing day is excluded from re-entering the IG Index for a three-month period. The rule for the lockout period takes precedence over the other rules for the IG Index selection. A locked out bond will not be selected, even if it qualifies for the IG Index.

Minimum Run. Any bond that enters the IG Index must remain in the IG Index for a minimum of six months, provided it is not downgraded to high yield, defaulted or fully redeemed in that period.

Annual Index Review.

The rules for the IG Index are reviewed once per year during the annual index review process to ensure that the IG Index provides a balanced representation of the U.S. dollar-denominated liquid investment grade corporate debt market. The results of the annual index review become available at the end of October.

Index Rebalancing

The IG Index is rebalanced every month, on the last business day of the month after the close of business, *i.e.*, the rebalancing date. Changes to amounts outstanding are taken into account only if they are publicly known three business days before the end of the month. Changes in ratings are taken into account only if they are publicly known two business days before the end of the month. New bonds issued are taken into account if they are publicly known to settle until the last calendar day of the month, inclusive, and if their rating has become known at least three business days before the end of the month.

In a first step, the selection criteria set out above are applied to the universe of U.S. dollar-denominated bonds. Bond ratings and amount outstanding are used as of the Bond Selection Cut-off Date. Maturity dates remain fixed for the life of the bond. Only bonds with a first settlement date on or before the Bond Selection Cut-off Date are included in the selection process. Once the eligible bond universe has been defined, the weight for each bond is determined and if necessary capped, applying an issuer cap of 3%. The weights and capping factors are determined on the last business day of each month using the end-of-month market values.

Consolidation of Contributed Quotes

Index calculation is based on bid and ask quotes provided by the contributing banks. As of March 2012, the following banks supply bond prices: Barclays Capital, BNP Paribas, Deutsche Bank, Goldman Sachs, HSBC, JPMorgan, Morgan Stanley, Royal Bank of Scotland and UBS.

The quotes pass through a two-step consolidation process. The first filter tests the technical validity of the quotes. The following parameters are tested: whether bid and ask quotes are non-negative, whether the bid quote is lower than the ask quote and whether the bid-ask spread is within 500 basis points.

In the second filter, the dispersion of the quotes that pass the technical validity is checked. A pre-defined margin will be set around a control quote to define an area within which a quote of a bond is expected to be. This margin is set per sector/rating combination and is reviewed monthly. All quotes that fall within this margin are eligible for consolidation. The control quote is determined by applying: (a) all observable quotes available to Markit, (b) the Markit iBoxx Forward Matrix or (c) manual quote verification, which includes verification with trading desks at contributing banks, market quotes available via commercial feeds, return consolidation and news feeds. This manual quote verification requires at least three independent price sources and must be full documented. The control quote is determined by applying these sequentially (*i.e.*, only if one determinant fails will the next determinant be used).

The consolidated bid and ask prices are then calculated from the remaining quotes. If fewer than two quotes are valid, no consolidated price can be generated. If two or three quotes are received, the consolidated price is determined as the arithmetical mean of these quotes. If four or more quotes are received, the highest and lowest quotes are eliminated. Thereafter the arithmetic average of the remaining quotes is calculated to determine the consolidated price.

In case the consolidation fails due to missing contributions or because not enough eligible bonds passed the control quote margin test, the contributing banks will be informed immediately in order to revise their quotes for the relevant securities. Until the next successful consolidation, the price of the affected bond used to calculate the Index is determined by using the Markit iBoxx Forward Matrix. The Markit iBoxx Forward Matrix uses country, currency, rating, issuer, industry, coupon and maturity to identify for each bond a group of securities with similar characteristics. The pricing of this bond is then linked to the movement of the swap or zero curves. The bonds in the matrix cell are used to calculate the appropriate spreads of the unconsolidated bond. A matrix of a certain number of the top closest bonds is established and their most recent historical spreads over the treasury zero curve are weighted to calculate a spread distribution. The price of the bond with missing contributions is calculated using the result average spreads.

Calculation of the iBoxx[®] \$ Liquid Investment Grade Index

Calculations are performed daily, using consolidated iBoxx bid prices at approximately 4 p.m. Eastern Time.

The total return of the IG Index is calculated using the price changes, accrued interest, interest payments and reinvestment income on cash flows received during the composition month.

Treatment of Special Intra-Month Events

If a bond is fully redeemed intra-month, the bond effectively ceases to exist. In all calculations, the redeemed bond is treated as cash based on the last consolidated price, the call price or the repurchase price, as applicable. A redemption factor and redemption price are used to treat these events in the IG Index and in calculations relating thereto. In addition, the clean price of the bond is set to the redemption price, and the interest accrued until the redemption date is treated as an irregular coupon payment.

If a bond is identified as trading flat of accrued, the accrued interest on the bond is set to zero in the total return index calculation and the bond is excluded from the calculation of all bond and index analytical values.

Some bonds have predefined coupon changes that lead to a change in the annual coupon over the life of the bond. In all instances, the coupon change must be a fixed amount on top of a fixed coupon, *i.e.* floating coupon bonds are not eligible for the IG Index. The two main categories of bonds with coupon changes of this nature are step-up bonds and event-driven bonds. Step-up bonds have a pre-defined coupon schedule that cannot change during the life of the bond. That coupon schedule is used in all bond calculations. Event-driven bonds' coupons may change upon the occurrence (or non-occurrence) of specified events, such as ratings changes, failure to register a bond or failure to complete a merger. In the calculation of the HY Index and the analytics, the coupon schedule as of the calculation date is used. Any events occurring after the calculation date are ignored in the determination of the applicable coupon schedule.

BACKGROUND ON THE iSHARES[®] iBOXX \$ HIGH YIELD CORPORATE BOND FUND

All information regarding the iShares[®] iBoxx \$ High Yield Corporate Bond Fund (the “**High Yield Bond Fund**”) contained in this index supplement, including, without limitation, its make-up, method of calculation and changes in its components, from publicly available information, without independent verification. This information reflects the policies of, and is subject to change by, iShares[®], Inc. (“**iShares**”), iShares[®] Trust, BlackRock Institutional Trust Company, N.A. (“**BTC**”) and BlackRock Fund Advisors (“**BFA**”). BFA is currently the investment adviser to the High Yield Bond Fund and is a wholly owned subsidiary of BTC, which in turn is a wholly owned subsidiary of BlackRock, Inc. The High Yield Bond Fund is an exchange-traded fund (“**ETF**”) that trades on the NYSE Arca, Inc. (“**NYSE Arca**”) under the ticker symbol “**HYG**.”

iShares[®] Trust is a registered investment company that consists of numerous separate investment portfolios, including the High Yield Bond Fund. Information provided to or filed with the SEC by iShares[®] pursuant to the Securities Act of 1933, as amended, and the Investment Company Act of 1940, as amended, can be located by reference to SEC file numbers 333-92935 and 811-09729, respectively, through the SEC’s website at <http://www.sec.gov>. For additional information regarding iShares[®] Trust, BFA and the High Yield Bond Fund, please see the High Yield Bond Fund’s prospectus. In addition, information about iShares[®] and the High Yield Bond Fund may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents and then iShares[®] website at www.ishares.com. Information contained in the iShares[®] website is not incorporated by reference in, and should not be considered part of, this index supplement.

Investment Objective and Strategy

The High Yield Bond Fund seeks to provide investment results that correspond generally to the price and yield performance, before fees and expenses, of the U.S. dollar-denominated liquid high yield corporate bond market as defined by the iBoxx[®] \$ Liquid HY Index (the “**HY Index**”).

BFA uses a “passive” or indexing approach to try to achieve the investment objective of the High Yield Bond Fund. The High Yield Bond Fund does not try to “beat” the index it tracks and does not seek temporary defensive positions when markets decline or appear overvalued. The High Yield Bond Fund uses a representative sampling indexing strategy (as described below under “— Representative Sampling”) to try to track the HY Index.

The High Yield Bond Fund may or may not hold all of the securities in the HY Index. The High Yield Bond Fund generally invests at least 90% of its assets in the bonds of the HY Index. However, the High Yield Bond Fund may at times invest up to 20% of its assets in certain futures, options and swap contracts, cash and cash equivalents, including money market funds advised by BFA, as well as in high yield corporate bonds not included in the HY Index, but which BFA believes will help the High Yield Bond Fund track the HY Index.

Representative Sampling

Representative sampling involves investing in a representative sample of securities that collectively has an investment profile similar to the HY Index. The securities selected are expected to have, in the aggregate, investment characteristics (based on factors such as market capitalization and industry weightings), fundamental characteristics (such as return variability, duration, maturity or credit ratings and yield) and liquidity measures similar to those of the HY Index.

Correlation

The HY Index is a theoretical financial calculation while the High Yield Bond Fund is an actual investment portfolio. The performance of the High Yield Bond Fund and the HY Index may vary due to transaction costs, non-U.S. currency valuation, asset valuations, corporate actions (such as mergers and spin-offs), timing variances and differences between the High Yield Bond Fund’s portfolio and the HY Index resulting from legal restrictions (such as diversification requirements) that apply to the High Yield Bond Fund but not to the HY Index or to the use of representative sampling. “Tracking error” is the difference between the performance (return) of the High Yield Bond Fund’s portfolio and that of the HY Index. BFA expects that, over time, the High Yield Bond Fund’s tracking error will not exceed 5%. Because the High Yield Bond Fund uses a representative sampling indexing strategy, it can be expected to have a larger tracking error than if it used a replication indexing strategy. “Replication” is an indexing strategy in

which a fund invests in substantially all of the securities in its underlying index in approximately the same proportions as in the underlying index.

Industry Concentration Policy

The High Yield Bond Fund will concentrate its investments (*i.e.*, hold 25% or more of its total assets) in a particular industry or group of industries to approximately the same extent that the HY Index is concentrated. For purposes of this limitation, securities of the U.S. government (including its agencies and instrumentalities), repurchase agreements collateralized by U.S. government securities and securities of state or municipal governments and their political subdivisions are not considered to be issued by members of any industry.

Holdings Information

The holding information for the High Yield Bond Fund is updated on a daily basis. As of June 21, 2012, 96.36% of the High Yield Bond Fund’s holdings consisted of bonds, 2.00% consisted of cash and 1.64% was in other assets, including dividends booked but not yet received. The following tables summarize the top 10 holdings of the High Yield Bond Fund as of such date.

Top 10 Holdings as of June 21, 2012

Security	Percentage of Total Holdings
BlackRock Funds III	2.00%
Sprint Nextel Corporation	0.70%
CIT Group Inc. (maturing 2/15/19)	0.62%
Intelsat, (Bermuda), Ltd.	0.58%
HCA Inc.	0.55%
Springleaf Finance Corp.	0.52%
First Data Corp.	0.50%
Samson Investment Co.	0.47%
Energy Transfer Equity LP	0.46%
CIT Group Inc. (maturing 05/02/2016)	0.45%

The iBoxx® \$ Liquid High Yield Index

All information contained in this index supplement regarding the iBoxx® \$ Liquid High Yield Index (the “**HY Index**”) including, without limitation, its make-up, method of calculation and changes in its components, from publicly available information. This information reflects the policies of, and is subject to change by, Markit Group Limited (“**Markit**”). The HY Index is calculated, maintained and published by Markit. Markit has no obligation to continue to publish, and may discontinue publication of, the HY Index.

The HY Index is reported by Bloomberg L.P. under the ticker symbol “IBOXHY.”

The HY Index is designed to reflect the performance of the U.S. dollar-denominated high yield corporate bond market. The HY Index is market-value weighted with an issuer cap of 3%.

The HY Index consists of sub-investment grade U.S. dollar-denominated bonds issued by corporate issuers from developed countries and rated by at least one of three rating services: Fitch Ratings, Moody's Investors Service or Standard & Poor's Rating Services (each a "**Ratings Agency**" and collectively the "**Ratings Agencies**"). The HY Index composition is rebalanced once a month, after the close of business on the last business day of the rebalancing month (the "**rebalancing date**"). The new HY Index composition becomes effective on the first business day of the next month (the "**composition month**").

The bonds in the HY Index must meet all the criteria described below as of the close of business three business days prior to the rebalancing date, *provided* that the relevant bond data can be verified, at Markit's sole discretion, as of such date (the "**Bond Selection Cut-off Date**").

The HY Index is multi-contributor priced. Prices for the bonds in the HY Index are sourced from a number of leading market makers. The received quotes are subject to a quality control process which is intended to exclude stale or off-market prices, and the quotes that pass the quality control are consolidated to the HY Index price. Additionally, the HY Index rules and their application are governed by two committees:

- **Technical Committee:** composed of representatives of the price contributing market makers and banks. The Technical Committee meets once a month in order to arbitrate monthly rebalancing, and to monitor market developments. It also provides assistance in the identification of eligible constituents, especially in the instance where the eligibility or the classification of a bond is unclear or contentious. Additionally, the Technical Committee discusses any market developments which may warrant index rule changes, provides recommendations on changes to the rules, and reviews whether a country should be deemed ineligible due to financial sanctions.
- **Oversight Committee:** composed of representatives from a broad range of asset managers. The purpose of the oversight committee is to review the recommendations and decisions of the Technical Committee and also to provide consultation and approval on any market developments which may warrant rule changes.

Selection Criteria for the iBoxx[®] \$ Liquid High Yield Index

The following selection criteria are applied to determine the constituents for the HY Index: bond type, credit rating, time to maturity, amount outstanding, classification, lockout period and minimum run.

Bond Type. Only fixed-rate bonds whose cash flow can be determined in advance are eligible for the HY Index. The HY Index is comprised solely of bonds. Treasury Bills and other money market instruments are not eligible. The HY Index includes only U.S. dollar denominated bonds.

In particular, bonds with the following characteristics are included: fixed coupon bonds, step-up bonds with coupon schedules known at issuance (or as functions of the issuer's rating), sinking funds and amortizing bonds, medium term notes, Rule 144A offerings, callable bonds and puttable bonds.

The following instrument types are specifically excluded from the HY Index: preferred shares, optionally and mandatorily convertible bonds, subordinated bank or insurance debt with mandatory contingent conversion features or with any conversion options before the first call date, bonds with other equity features attached (e.g., options or warrants), private placements, perpetual bonds, floating rate notes, pay-in-kind bonds (during the pay-in-kind period), zero coupon bonds, zero step-ups (GAINS), bonds with differences between accrual and coupon payment periods and monthly-paying bonds, and Regulation S offerings.

Any bond subject to a firm call or tender offer in the month immediately following the rebalancing date will be excluded from the HY Index, provided that Markit is aware of that tender offer or call as of the Bond Selection Cut-off Date.

Credit Rating. Bonds in the HY Index must have a Markit iBoxx Rating of sub-investment grade, which is defined as BB+ or lower by S&P or Fitch or Ba1 or lower by Moody's, but the bonds must not be in default. If a bond is rated

by more than one of the foregoing ratings agencies, then the Markit iBoxx Rating is the average of the provided ratings. The rating is consolidated to the nearest rating grade in accordance with Appendix 4.3 to the Markit iBoxx Rules. Rating notches are not used. Issues rated D by Fitch or S&P, or that have been subject to a default press release by Moody's cannot enter the HY Index. Those issues in the HY Index that are subsequently downgraded to D by Fitch or S&P or subject to a default press release by Moody's (as of the Bond Selection Cut-off Date) will be taken out of the HY Index on the next rebalancing date. After a bond has migrated into high yield from investment grade status, it must retain that status for three months (the "stabilization period") before it can be included in the HY Index. In case of an ID change or changes of a 144A version into a registered bond, the ratings from the 144A bond also are used for the registered bond.

Time to Maturity. To qualify for entry in the HY Index, bonds must have at least one year and six months remaining time to maturity. Bonds in the HY Index must have maturities of at least one year at the rebalancing date. As of issuance the time to maturity of the bonds should be fifteen years or less.

Amount Outstanding. The outstanding face value of all bonds denominated in U.S. dollars from the issuer must be greater than or equal to \$1 billion as of the Bond Selection Cut-off Date. The outstanding face value of a bond must be greater than or equal to \$400 million as of the Bond Selection Cut-off Date. Partial buybacks or increases will affect the outstanding face value of a prospective bond. Markit considers changes to the outstanding face value of a candidate bond as a result of partial or full buybacks or increases, *provided* that Markit is aware of such changes as of the Bond Selection Cut-off Date.

Bond Classification. The bond must be corporate credit, *i.e.*, debt instruments backed by corporate issuers that are not secured by specific assets. Debt issued by governments, sovereigns, quasi-sovereigns and government-backed or guaranteed entities is excluded.

Bonds must be denominated in U.S. dollars.

Bonds from countries classified as developed markets based on the "Markit Global Economic Development Classification" are eligible for the HY Index. As of March 2012, the issuer or, in the case of a finance subsidiary, the issuer's guarantor, must be domiciled and the country of risk must be in Andorra, Australia, Austria, Belgium, Bermuda, Canada, Cayman Islands, Cyprus, Denmark, Faeroe Islands, Finland, France, Germany, Gibraltar, Greece, Hong Kong, Iceland, Ireland, Italy, Japan, Liechtenstein, Luxembourg, Malta, Monaco, Netherlands, New Zealand, Norway, Portugal, San Marino, Singapore, Spain, Sweden, Switzerland, United States or the United Kingdom in order to be eligible for inclusion in the HY Index. A new country is added to the HY Index if it is classified as a developed market based on the "Markit Global Economic Development Classification". A country is no longer eligible for the HY Index if it is classified as an emerging market based on the "Markit Global Economic Development Classification". The "Markit Global Economic Development Classification" is updated once per year. The results are published at the end of July. The inclusion or exclusion of a country becomes effective at the end of the October following that publication.

Lockout Period. A bond that drops out of the HY Index at the rebalancing day is excluded from re-entering the index for a three-month period. The rule for the lockout period takes precedence over the other rules for the HY Index selection. A locked out bond will not be selected, even if it qualifies for the HY Index.

Minimum Run. Any bond that enters the HY Index must remain in the index for a minimum of six months, *provided* it is not upgraded to investment grade, defaulted or fully redeemed in that period.

Annual Index Review

The rules for the HY Index are reviewed once per year during the annual index review process to ensure that the HY Index provides a balanced representation of the U.S. dollar denominated liquid high yield corporate debt market. The results of the annual index review become effective at the end of October.

Index Rebalancing.

The HY Index is rebalanced every month, on the last business day of the month after the close of business, *i.e.*, the rebalancing date. Changes to amounts outstanding are taken into account only if they are publicly known three business days before the end of the month. Changes in ratings are taken into account only if they are publicly known two

business days before the end of the month. New bonds issued are taken into account if they are publicly known to settle until the last calendar day of the month, inclusive, and if their rating has become known at least three business days before the end of the month.

In a first step, the selection criteria set out above are applied to the universe of U.S. dollar-denominated bonds. Bond ratings and amount outstanding are used as of the Bond Selection Cut-off Date. Maturity dates remain fixed for the life of the bond. Only bonds with a first settlement date on or before the Bond Selection Cut-off Date are included in the selection process. Once the eligible bond universe has been defined, the weight for each bond is determined and if necessary capped, applying an issuer cap of 3%. The weights and capping factors are determined on the last business day of each month using the end-of-month market values.

Consolidation of Contributed Quotes.

Index calculation is based on bid and ask quotes provided by the contributing banks. As of March 2012, the following banks supply bond prices: Barclays Capital, BNP Paribas, Deutsche Bank, Goldman Sachs, HSBC, JP Morgan, Morgan Stanley, Royal Bank of Scotland and UBS.

The quotes pass through a two-step consolidation process. The first filter tests the technical validity of the quotes. The following parameters are tested: whether bid and ask quotes are non-negative, whether the bid quote is lower than the ask quote and whether the bid-ask spread is within 500 basis points.

In the second filter, the dispersion of the quotes that pass the technical validity is checked. A pre-defined margin will be set around a control quote to define an area within which a quote of a bond is expected to be. This margin is set per sector/rating combination and is reviewed monthly. All quotes that fall within this margin are eligible for consolidation. The control quote is determined by applying: (a) all observable quotes available to Markit, (b) the Markit iBoxx Forward Matrix or (c) manual quote verification, which includes verification with trading desks at contributing banks, market quotes available via commercial feeds, return consolidation and news feeds. This manual quote verification requires at least three independent price sources and must be full documented. The control quote is determined by applying these sequentially (i.e., only if one determinant fails will the next determinant be used).

The consolidated bid and ask prices are then calculated from the remaining quotes. If fewer than two quotes are valid, no consolidated price can be generated. If two or three quotes are received, the consolidated price is determined as the arithmetical mean of these quotes. If four or more quotes are received, the highest and lowest quotes are eliminated. Thereafter the arithmetic average of the remaining quotes is calculated to determine the consolidated price.

In case the consolidation fails due to missing contributions or because not enough eligible bonds passed the control quote margin test, the contributing banks will be informed immediately in order to revise their quotes for the relevant securities. Until the next successful consolidation, the price of the affected bond used to calculate the Index is determined by using the Markit iBoxx Forward Matrix. The Markit iBoxx Forward Matrix uses country, currency, rating, issuer, industry, coupon and maturity to identify for each bond a group of securities with similar characteristics. The pricing of this bond is then linked to the movement of the swap or zero curves. The bonds in the matrix cell are used to calculate the appropriate spreads of the unconsolidated bond. A matrix of a certain number of the top closest bonds is established and their most recent historical spreads over the treasury zero curve are weighted to calculate a spread distribution. The price of the bond with missing contributions is calculated using the result average spreads.

Calculation of the iBoxx[®] \$ Liquid High Yield Index

Calculations are performed daily, using consolidated iBoxx bid prices at approximately 4 p.m. Eastern Time.

The total return of the HY Index is calculated using the price changes, accrued interest, interest payments and reinvestment income on cash flows received during the composition month.

Treatment of Special Intra-Month Events

If a bond is fully redeemed intra-month, the bond effectively ceases to exist. In all calculations, the redeemed bond is treated as cash based on the last consolidated price, the call price or the repurchase price, as applicable. A redemption factor and redemption price are used to treat these events in the HY Index and in calculations relating thereto. In

addition, the clean price of the bond is set to the redemption price, and the interest accrued until the redemption date is treated as an irregular coupon payment.

If a bond is identified as trading flat of accrued, the accrued interest on the bond is set to zero in the total return index calculation and the bond is excluded from the calculation of all bond and index analytical values.

Some bonds have predefined coupon changes that lead to a change in the annual coupon over the life of the bond. In all instances, the coupon change must be a fixed amount on top of a fixed coupon, *i.e.* floating coupon bonds are not eligible for the HY Index. The two main categories of bonds with coupon changes of this nature are step-up bonds and event-driven bonds. Step-up bonds have a pre-defined coupon schedule that cannot change during the life of the bond. That coupon schedule is used in all bond calculations. Event-driven bonds' coupons may change upon the occurrence (or non-occurrence) of specified events, such as ratings changes, failure to register a bond or failure to complete a merger. In the calculation of the HY Index and the analytics, the coupon schedule as of the calculation date is used. Any events occurring after the calculation date are ignored in the determination of the applicable coupon schedule.

BACKGROUND ON THE iSHARES[®] MSCI EMERGING MARKETS INDEX FUND

All information contained in this index supplement regarding the iShares[®] MSCI Emerging Markets Index Fund (the “**EEM Fund**”), including, without limitation, its make-up, method of calculation and changes in its components, from publicly available information, without independent verification. This information reflects the policies of, and is subject to change by, iShares[®], Inc., BlackRock Institutional Trust Company, N.A. (“**BTC**”) and BlackRock Fund Advisors (“**BFA**”). The EEM Fund is an investment portfolio maintained and managed by iShares[®], Inc. BFA is currently the investment adviser to the EEM Fund. The EEM Fund is an exchange-traded fund (“**ETF**”) that trades on the NYSE Arca, Inc. (“**NYSE Arca**”) under the ticker symbol “EEM.”

iShares[®], Inc. is a registered investment company that consists of numerous separate investment portfolios, including the EEM Fund. Information provided to or filed with the SEC by iShares[®], Inc. pursuant to the Securities Act of 1933, as amended, and the Investment Company Act of 1940, as amended, can be located by reference to SEC file numbers 033-97598 and 811-09102, respectively, through the SEC’s website at <http://www.sec.gov>. For additional information regarding iShares[®], Inc., BFA and the EEM Fund, please see the EEM Fund’s prospectus. In addition, information about iShares[®] and the EEM Fund may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents and the iShares[®] website at www.ishares.com. Information contained in the iShares[®] website is not incorporated by reference in, and should not be considered a part of, this index supplement.

Investment Objective and Strategy

The EEM Fund seeks to provide investment results that correspond generally to the price and yield performance, before fees and expenses, of publicly traded securities in emerging markets, as measured by the MSCI Emerging Markets Index. The EEM Fund holds equity securities traded primarily in the global emerging markets. The MSCI Emerging Markets Index was developed by MSCI Inc. (“**MSCI**”) as an equity benchmark for international stock performance, and is designed to measure equity market performance in the global emerging markets. For more information about the MSCI Emerging Markets Index, please see “Background on the MSCI Indices” in this index supplement.

As of March 31, 2012, the EEM Fund holdings by country consisted of the following 23 countries: Brazil, Chile, China, Colombia, Czech Republic, Egypt, Hong Kong, Hungary, India, Indonesia, Luxembourg, Malaysia, Mexico, Peru, Philippines, Poland, Russia, South Africa, South Korea, Taiwan, Thailand, Turkey and the United States. In addition, as June 20, 2012, the EEM Fund’s three largest holdings by country were China, South Korea and Brazil. As of such date, its three largest equity securities were Samsung Electronics Co., Ltd., China Mobile Limited and Taiwan Semiconductor Manufacturing, and its three largest sectors were financials, information technology and energy.

The EEM Fund uses a representative sampling indexing strategy (as described below under “Representative Sampling”) to try to track the MSCI Emerging Markets Index. The EEM Fund generally invests at least 90% of its assets in securities of the MSCI Emerging Markets Index and depository receipts representing securities in the MSCI Emerging Markets Index. In addition, the EEM Fund may invest up to 10% of its assets in other securities, including securities not in the MSCI Emerging Markets Index, but which BFA believes will help the EEM Fund track the MSCI Emerging Markets Index, futures contracts, options on futures contracts, other types of options and swaps related to the MSCI Emerging Markets Index, as well as cash and cash equivalents, including shares of money market funds affiliated with BFA or its affiliates.

Representative Sampling

The EEM Fund pursues a “representative sampling” indexing strategy in attempting to track the performance of the MSCI Emerging Markets Index, and generally does not hold all of the equity securities included in the MSCI Emerging Markets Index. The EEM Fund invests in a representative sample of securities that collectively has an investment profile similar to the MSCI Emerging Markets Index. Securities selected are expected to have, in the aggregate, investment characteristics (based on factors such as market capitalization and industry weightings), fundamental characteristics (such as return variability and yield) and liquidity measures similar to those of the MSCI Emerging Markets Index.

Correlation

The MSCI Emerging Markets Index is a theoretical financial calculation, while the EEM Fund is an actual investment portfolio. The performance of the EEM Fund and the MSCI Emerging Markets Index will vary due to transaction costs, foreign currency valuation, asset valuations, corporate actions (such as mergers and spin-offs), timing variances, and differences between the EEM Fund's portfolio and the MSCI Emerging Markets Index resulting from legal restrictions (such as diversification requirements) that apply to the EEM Fund but not to the MSCI Emerging Markets Index or the use of representative sampling. A figure of 100% would indicate perfect correlation. "Tracking error" is the difference between the performance (return) of the EEM Fund's portfolio and the MSCI Emerging Markets Index. BFA expects that, over time, the EEM Fund's tracking error will not exceed 5%. The EEM Fund, using a representative sampling indexing strategy, can be expected to have a greater tracking error than a fund using a replication indexing strategy. Replication is an indexing strategy in which a fund invests in substantially all of the securities in its underlying index in approximately the same proportions as in the underlying index.

Industry Concentration Policy

The EEM Fund will concentrate its investments (*i.e.*, hold 25% or more of its total assets) in a particular industry or group of industries to approximately the same extent that the MSCI Emerging Markets Index is concentrated. For purposes of this limitation, securities of the U.S. government (including its agencies and instrumentalities) and repurchase agreements collateralized by U.S. government securities are not considered to be issued by members of any industry.

Holdings Information

As of June 20, 2012, 99.09% of the EEM Fund's holdings consisted of equity securities, 0.15% consisted of cash and 0.76% was in other assets, including dividends booked but not yet received. The following tables summarize the EEM Fund's top holdings in individual companies and by sector as of such date.

Top holdings in individual securities as of June 20, 2012

Company	Percentage of Total Holdings
Samsung Electronics Co., Ltd.	3.57%
China Mobile Limited	1.89%
Taiwan Semiconductor Manufacturing	1.81%
América Móvil SAB De C.V.	1.51%
OAQ Gazprom	1.51%
China Construction Bank-H	1.40%
Petróleo Brasileiro S.A. - Preferred	1.21%
Vale S.A.	1.14%
CNOOC Ltd.	1.07%
Industrial and Commercial Bank of China	1.05%

Top holdings by sector as of June 20, 2012

Sector	Percentage of Total Holdings
Financials	23.98%
Information Technology	13.84%
Energy	12.93%
Materials	12.19%
Consumer Staples	8.43%
Consumer Discretionary	8.10%
Telecommunication Services	7.98%

Sector	Percentage of Total Holdings
Industrials	6.81%
Utilities	3.71%
Health Care	1.12%
Other/Undefined	0.91%

BACKGROUND ON THE iSHARES[®] JPMORGAN USD EMERGING MARKETS BOND FUND

All information contained in this index supplement regarding the iShares[®] JPMorgan USD Emerging Markets Bond Fund (the “**EMB Fund**”), including, without limitation, its make-up, method of calculation and changes in its components, from publicly available information, without independent verification. This information reflects the policies of, and is subject to change by iShares[®], Inc. (“iShares[®]”), iShares[®] Trust, BlackRock Institutional Trust Company, N.A. (“**BTC**”) and BlackRock Fund Advisors (“**BFA**”). BFA is currently the investment adviser to the EMB Fund. The iShares[®] JPMorgan USD Emerging Markets Bond Fund is an exchange-traded fund (“**ETF**”) that trades on the NYSE Arca, Inc. (“**NYSE Arca**”) under the ticker symbol “**EMB**.”

iShares[®], Inc. is a registered investment company that consists of numerous separate investment portfolios, including the EMB Fund. Information provided to or filed with the SEC by iShares[®], Inc. pursuant to the Securities Act of 1933, as amended, and the Investment Company Act of 1940, as amended, can be located by reference to SEC file numbers 033-97598 and 811-09102, respectively, through the SEC’s website at <http://www.sec.gov>. For additional information regarding iShares[®], Inc., BFA and the EMB Fund, please see the EMB Fund’s prospectus. In addition, information about iShares[®] and the EMB Fund may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents and the iShares[®] website at www.ishares.com. Information contained in the iShares[®] website is not incorporated by reference in, and should not be considered a part of, this index supplement.

Investment Objective and Strategy

The EMB Fund seeks to provide investment results that correspond generally to the price and yield performance, before fees and expenses, of actively traded external debt instruments in emerging market countries, as measured by the JPMorgan EMBI Global Core Index (the “**EMBIG Core Index**”). The EMBIG Core Index was developed by JPMorgan Chase & Co. as a liquid U.S.-dollar emerging markets debt benchmark, and it tracks total returns for actively traded external debt instruments in emerging markets. For more information about the EMBIG Core Index, please see “— The JPMorgan EMBI Global Core Index” below.

As of June 20, 2012, the iShares[®] JPMorgan USD Emerging Markets Bond Fund holdings by country consisted of the following 37 countries: Argentina, Belarus, Brazil, British Virgin Islands, Bulgaria, Chile, China, Colombia, Cote D’Ivoire, Croatia, Dominican Republic, Egypt, El Salvador, Hungary, Indonesia, Iraq, Kazakhstan, Lebanon, Lithuania, Malaysia, Mexico, Netherlands, Panama, Peru, Philippines, Poland, Romania, Russia, Serbia, South Africa, Sri Lanka, Turkey, Ukraine, United States, Uruguay, Venezuela and Vietnam. In addition, as of June 11, 2012, the EMB Fund’s three largest holdings by sector were Brazil, Russia and Turkey. As of June 20, 2012, its three largest debt securities were bonds with a 7.75% coupon due January 14, 2031 issued by the Philippines, bonds with a 6.55% coupon due March 14, 2037 issued by Peru and bonds with a 7.12% coupon due January 20, 2037 issued by Brazil.

The EMB Fund uses a representative sampling indexing strategy (as described below under “Representative Sampling”) to try to track the EMBIG Core Index. The EMB Fund generally invests at least 90% of its assets in the securities of the EMBIG Core Index. However, the EMB Fund may at times invest up to 20% of its assets in certain futures, options and swap contracts, cash and cash equivalents, including money market funds advised by BFA, as well as in bonds not included in the EMBIG Core Index, but which BFA believes will help the EMB Fund track the EMBIG Core Index.

Representative Sampling

The EMB Fund pursues a “representative sampling” strategy in attempting to track the performance of the EMBIG Core Index, and generally does not hold all of the equity securities included in the EMBIG Core Index. The EMB Fund invests in a representative sample of securities that collectively has an investment profile similar to the EMBIG Core Index. Securities selected are expected to have, in the aggregate, investment characteristics (based on factors such as market capitalization and industry weightings), fundamental characteristics (such as return variability, duration, maturity or credit ratings and yield) and liquidity measures similar to those of the EMBIG Core Index.

Correlation

The EMBIG Core Index is a theoretical financial calculation, while the EMB Fund is an actual investment portfolio. The performance of the EMB Fund and the EMBIG Core Index will vary due to transaction costs, foreign currency valuation, asset valuations, corporate actions (such as mergers and spin-offs), timing variances, and differences between the EMB Fund's portfolio and the EMBIG Core Index resulting from legal restrictions (such as diversification requirements) that apply to the EMB Fund but not to the EMBIG Core Index or the use of representative sampling. "Tracking error" is the difference between the performance (return) of the EMB Fund's portfolio and the EMBIG Core Index. BFA expects that, over time, the EMB Fund's tracking error will not exceed 5%. The EMB Fund, using a representative sampling indexing strategy, can be expected to have a greater tracking error than a fund using a replication indexing strategy. Replication is a strategy in which a fund invests in substantially all of the securities in its underlying index in approximately the same proportions as in the underlying index.

Industry Concentration Policy

The EMB Fund will concentrate its investments (*i.e.*, hold 25% or more of its total assets) in a particular industry or group of industries to approximately the same extent that the EMBIG Core Index is concentrated. For purposes of this limitation, securities of the U.S. government (including its agencies and instrumentalities) and repurchase agreements collateralized by U.S. government securities are not considered to be issued by members of any industry.

Holdings Information

As of June 20, 2012, 97.39% of the EMB Fund's holdings consisted of bonds, 0.89% consisted of cash and 1.73% was in other assets, including dividends booked but not yet received. The following tables summarize the EMB Fund's top holdings as of such date.

Top Holdings by Security as of June 20, 2012

Company	Percentage of Total Holdings
Philippines, 01/14/2031, 7.75%	4.38%
Peru, 03/14/2037, 6.55%	3.17%
Brazil, 01/20/2037, 7.12%	2.78%
Russia, 03/31/2030, 7.50%	2.60%
Indonesia, 01/17/2018, 6.88%	2.47%
Turkey, 03/17/2036, 6.88%	2.13%
Uruguay, 03/21/2036, 7.62%	2.12%
Indonesia, 02/17/2037, 6.62%	2.02%
Mexico, 09/27/2034, 6.75%	1.99%
Turkey, 04/03/2018, 6.75%	1.92%

Top Holdings by Sector as of June 20, 2012

Sector	Percentage of Total Holdings
Brazil	7.81%
Mexico	7.27%
Russia	7.13%
Turkey	7.03%
Philippines	6.85%
Indonesia	6.74%

Sector	Percentage of Total Holdings
Colombia	5.14%
Venezuela	4.72%
Peru	4.22%
Poland	4.18%
Other/Undefined	38.89%

The JPMorgan EMBI Global Core Index

All information contained in this index supplement regarding the JPMorgan EMBI Global Core Index, including, without limitation, its make-up, method of calculation and changes in its components, from publicly available information, without independent verification. This information reflects the policies of, and is subject to change by, JPMorgan Securities LLC (“JPMS”). The JPMorgan EMBI Global Core Index is calculated, maintained and published by JPMS. JPMS is under no obligation to continue to publish, and may discontinue publication of, the JPMorgan EMBI Global Core Index.

The JPMorgan EMBI Global Core Index is a broad, diverse, market capitalization weighted index designed to measure the performance of U.S. dollar-denominated Brady bonds (*i.e.*, U.S. dollar-denominated bonds issued by emerging market countries and collateralized by U.S. Treasury zero-coupon bonds), Eurobonds (*i.e.*, bonds issued in a currency other than the currency of the country or market in which it is issued), traded loans and securities issued by sovereign and quasi-sovereign entities of emerging market countries. Quasi-sovereign entities are entities the securities of which are either 100% owned by their respective governments or subject to a 100% guarantee that does not rise to the level of constituting the full faith and credit by such governments. The methodology is designed to distribute the weights of each country within the JPMorgan EMBI Global Core Index by limiting the weights of countries with higher debt outstanding and reallocating this excess to countries with lower debt outstanding.

As of October 31, 2011, the JPMorgan EMBI Global Core Index consisted of the following 33 countries: Argentina, Belarus, Brazil, Bulgaria, Chile, China, Colombia, Cote d’Ivoire, Croatia, Dominican Republic, Egypt, El Salvador, Hungary, Indonesia, Iraq, Kazakhstan, Lebanon, Lithuania, Malaysia, Mexico, Panama, Peru, the Philippines, Poland, Russia, Serbia, South Africa, Sri Lanka, Turkey, Ukraine, Uruguay, Venezuela and Vietnam. As of October 31, 2011, the JPMorgan EMBI Global Core Index’s five highest-weighted countries were Brazil, Russia, Mexico, Turkey and the Philippines.

In order for a bond to be considered eligible for inclusion in the JPMorgan EMBI Global Core Index, the bond must be issued by a country that is considered an emerging market. Two criteria determine whether a country is defined as an emerging market and therefore can be considered for inclusion in the JPMorgan EMBI Global Core Index. First, a country must be classified as having a low or middle per capita income by the World Bank for at least two consecutive years, based on data lagged one year. Requiring two years of classification reduces the potential for traditionally high-income countries to briefly enter and then exit the index. The current source for these classifications is the World Bank publication *Global Development Finance*, which is published annually and reflects per capita income brackets as of the previous year’s close. Second, regardless of their World-Bank-defined income level, countries that either have restructured their external debt during the past ten years or currently have restructured external debt outstanding will also be considered for inclusion in the index.

Once the universe of emerging markets countries has been defined for the index, the eligible instruments from these countries must be selected. Instruments that satisfy all of the following defined criteria will be eligible for inclusion in the JPMorgan EMBI Global Core Index:

1. Instrument type;
2. Issuer type classification;
3. Currency denomination;
4. Current face amount outstanding;
5. Remaining time until maturity;
6. Legal jurisdiction;
7. Settlement method; and
8. Quantifiable source of cash flow return.

Instrument Type. The JPMorgan EMBI Global Core Index includes both fixed-rate and floating-rate instruments, as well as capitalizing/amortizing bonds or loans. Bonds or loans with embedded options and warrants are eligible for inclusion if (a) the options/warrants are attached to instruments that would otherwise be included in the index and (b) the quotation convention (as recommended by the Emerging Markets Traders Association) is for instrument prices to be quoted cum options or warrants. Convertible bonds are not eligible for inclusion into the index.

Issuer Type Classification. The JPMorgan EMBI Global Core Index contains only those bonds or loans issued by sovereign and quasi-sovereign entities from index-eligible countries. Quasi-sovereign entities are entities the securities of which are either 100% owned by their respective governments or subject to a 100% guarantee that does not rise to the level of constituting the full faith and credit by such governments.

Instruments will not be eligible for inclusion in the JPMorgan EMBI Global Core Index if their credit has been improved by (a) giving security over commercial receivables or (b) giving a guarantee from a guarantor that is not a subsidiary of the eventual obligor or the parent company/beneficiary of the issuer of the instrument. For the purposes of clarification, bonds that are secured in part by U.S. Treasuries (*e.g.*, Brady bonds) are eligible for inclusion.

Where financing vehicles are used, bonds or loans may be included in the JPMorgan EMBI Global Core Index if either (a) the financing vehicle or bond is guaranteed by an index-eligible issuer or (b) the transaction is structured as a pass-through where the creditor of the financing vehicle has full recourse to the underlying loan or bond between the financing vehicle and the final obligor, which itself must be an index-eligible issuer. In order to avoid double-counting of index instruments, a bond or loan that is issued by a financing vehicle is only eligible for inclusion into the JPMorgan EMBI Global Core Index if the underlying loan or bond is not itself included in the index.

Current Face Amount Outstanding. Only issues with a current face amount outstanding of \$1 billion or more will be considered for inclusion. If an issue's current face outstanding falls below this requirement (due to either a debt retirement by the sovereign or the amortization of principal), the issue will be removed from the index at the next month-end rebalancing date. The reverse also holds true. Existing issues that, through reopenings, increase in size to satisfy the minimum current face outstanding requirement are then considered for inclusion in the index at the next month-end rebalancing date.

Time Until Maturity. Only those instruments with at least 2 1/2 years until maturity are considered for inclusion. Once added, an instrument may remain in the JPMorgan EMBI Global Core Index until 24 months before it matures. On the month-end preceding this anniversary, the instrument is removed from the index.

Legal Jurisdiction. Inclusion into the JPMorgan EMBI Global Core Index is limited to issues with legal jurisdiction that is domestic to a G-7 country. Local law instruments or bonds that do not fall under G-7 jurisdiction are not eligible for the JPMorgan EMBI Global Core Index.

Settlement Criteria. Instruments in the JPMorgan EMBI Global Core Index must be able to settle internationally (either through Euroclear or another institution domiciled outside the issuing country).

Quantifiable Source of Cash Flow Return. The final requirement is that an issue's bid and offer prices be available on a daily and timely basis (either from an inter-dealer broker or JPMorgan Chase & Co.). The lack of availability of such prices prevents the addition of a new issue to the JPMorgan EMBI Global Core Index. In the case of the current JPMorgan EMBI Global Core Index issues, if reliable prices for an issue become unavailable, it is removed from the index. Once an issue is removed, it will not be reconsidered for inclusion in the JPMorgan EMBI Global Core Index during the next 12 months.

The JPMorgan EMBI Global Core Index is generally rebalanced on a monthly basis. A new issue that meets the admission requirements is added to the JPMorgan EMBI Global Core Index on the first month-end business day after its issuance, provided its issue date falls before the 15th of the month. A new issue whose settlement date falls on or after the 15th of the month is added to the JPMorgan EMBI Global Core Index on the last business day of the next month.

There are two exceptions to this rule. The first exception applies to a new issue that is released as part of a debt exchange program. For example, if a country exchanges a portion of its outstanding debt for a new issue after the 15th of the month, at the month-end rebalancing date immediately following this event the amount of debt retired in this exchange would be removed from the JPMorgan EMBI Global Core Index. The new issue would then be added to the JPMorgan EMBI Global Core Index (provided official exchange results are made available in a timely manner and the issue settles by month-end).

The second exception concerns Regulation S securities. An instrument that is issued solely in reliance on Regulation S of the Securities Act of 1933 and not pursuant to Rule 144A will be ineligible for inclusion in the JPMorgan EMBI Global Core Index until the expiration of the relevant Regulation S restricted period. The date at which the restriction is lifted will effectively be the new "issue" date, at which point the 15th of the month rule will apply.

In extreme cases, an intra-month rebalancing can occur when: (i) more than \$6 billion of the face amount of JPMorgan EMBI Global Core Index bonds are exchanged; (ii) more than 2/3 of the face amount of any one of the most liquid bonds are exchanged. If an announcement is made for a bond to be called, it is removed from the JPMorgan EMBI Global Core Index on the month-end prior to its call date on the basis of having less than 24 months remaining until maturity. However, if an announcement is not made in time for the bond to be removed from the JPMorgan EMBI Global Core Index on the prior month-end, it will be removed the first month-end following the announcement, unless the amount to be called triggers an intra-month rebalancing.

The weight of each security in the JPMorgan EMBI Global Core Index is determined by first starting with the face amount outstanding of all eligible securities and aggregating such securities by country. The highest-weighted countries are then constrained by capping the total weight within those countries. The result establishes new country weights that are then used to calculate the new eligible face amounts per security within those countries. To calculate the final weights of each security in the JPMorgan EMBI Global Core Index, the current day's price is multiplied by each security's adjusted face amount. The market capitalization for each security is then divided by the total market capitalization for all securities in the JPMorgan EMBI Global Core Index. The result represents the weight of the security expressed as a percentage of the JPMorgan EMBI Global Core Index.

The JPMorgan EMBI Global Core Index is priced at 3:00 p.m., Eastern Time every business day of the year as defined by the U.S. bond market calendar. Composite instruments are priced using the best market bid (highest) and the best market ask (lowest) indicated by the following emerging market broker screens: Eurobrokers, Garban, GFI, Tullet & Tokyo and Tradition. For instruments where there is not a valid price available at 3:00 p.m. Eastern Time, the last available price is obtained from the market. As a last resort, if there are no valid market prices for an instrument, JPMS traders are asked to provide a market bid and ask. For those securities where pricing is not available on a regular basis, such securities will be excluded from the JPMorgan EMBI Global Core Index.

BACKGROUND ON THE iSHARES[®] DOW JONES REAL ESTATE INDEX FUND

All information contained in this index supplement regarding the iShares[®] Dow Jones U.S. Real Estate Index Fund (the “**Real Estate Fund**”), including, without limitation, its make-up, method of calculation and changes in its components, from publicly available information, without independent verification. This information reflects the policies of, and is subject to change by iShares[®], Inc. (“**iShares**”), iShares[®] Trust, BlackRock Institutional Trust Company, N.A. (“**BTC**”) and BlackRock Fund Advisors (“**BFA**”). BFA is currently the investment adviser to the Real Estate Fund and is a wholly owned subsidiary of BTC, which in turn is a wholly owned subsidiary of BlackRock, Inc. The Real Estate Fund is an exchange-traded fund (“**ETF**”) that trades on the NYSE Arca, Inc. (“**NYSE Arca**”) under the ticker symbol “IYR.”

iShares[®] Trust is a registered investment company that consists of numerous separate investment portfolios, including the Real Estate Fund. Information provided to or filed with the SEC by iShares[®] Trust pursuant to the Securities Act of 1933, as amended, and the Investment Company Act of 1940, as amended, can be located by reference to SEC file numbers 333-92935 and 811-09729, respectively, through the SEC’s website at <http://www.sec.gov>. For additional information regarding iShares[®] Trust, BFA, and the Real Estate Fund, please see the Real Estate Fund’s prospectus. In addition, information about iShares[®] and the Real Estate Fund may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents and the iShares[®] website at www.ishares.com. Information contained in the iShares[®] website is not incorporated by reference in, and should not be considered a part of, this index supplement.

Investment Objective and Strategy

The Real Estate Fund seeks to provide investment results that correspond generally to the price and yield performance, before fees and expenses, of publicly traded securities in the real estate sector of the U.S. equity market, as measured by the Dow Jones U.S. Real Estate Index (the “**Real Estate Index**”).

BFA uses a “passive” or indexing approach to try to achieve the investment objective of the Real Estate Fund. The Real Estate Fund does not try to “beat” the index it tracks and does not seek temporary defensive positions when markets decline or appear overvalued. The Real Estate Fund uses a representative sampling indexing strategy (as described below under “Representative Sampling”) to try to track the Real Estate Index.

The Real Estate Fund may or may not hold all of the securities in the Real Estate Index. The Real Estate Fund generally invests at least 90% of its assets in securities of the Real Estate Index and in depositary receipts representing securities of the Real Estate Index. The Real Estate Fund may invest the remainder of its assets in securities not included in the Real Estate Index, but which BFA believes will help the Real Estate Fund track the Real Estate Index, and in futures contracts, options on futures contracts, options and swaps as well as cash and cash equivalents, including shares of money market funds advised by BFA or its affiliates.

Representative Sampling

Representative sampling involves investing in a representative sample of securities that collectively has an investment profile similar to the Real Estate Index. The securities selected are expected to have, in the aggregate, investment characteristics (based on factors such as market capitalization and industry weightings), fundamental characteristics (such as return variability and yield) and liquidity measures similar to those of the Real Estate Index.

Correlation

The Real Estate Index is a theoretical financial calculation, while the Real Estate Fund is an actual investment portfolio. The performance of the Real Estate Fund and the Real Estate Index may vary due to transaction costs, non-U.S. currency valuations, asset valuations, corporate actions (such as mergers and spin-offs), timing variances and differences between the Real Estate Fund’s portfolio and the Real Estate Index resulting from legal restrictions (such as diversification requirements) that apply to the Real Estate Fund but not to the Real Estate Index or the use of representative sampling. “Tracking error” is the difference between the performance (return) of the Real Estate Fund’s portfolio and that of the Real Estate Index. BFA expects that, over time, the Real Estate Fund’s tracking error will not exceed 5%. Because the Real Estate Fund uses a representative sampling indexing strategy, it can be expected to have a larger tracking error than if it used a replication indexing strategy. “Replication” is an indexing strategy in which a fund

invests in substantially all of the securities in its underlying index in approximately the same proportions as in the underlying index.

Industry Concentration Policy

The Real Estate Fund will concentrate its investments (*i.e.*, hold 25% or more of its total assets) in a particular industry or group of industries to approximately the same extent that the Real Estate Index is concentrated. For purposes of this limitation, securities of the U.S. government (including its agencies and instrumentalities) and repurchase agreements collateralized by U.S. government securities are not considered to be issued by members of any industry.

Holdings Information

The holding information for the Real Estate Fund is updated on a daily basis. As of June 21, 2012, 99.58% of the Real Estate Fund’s holdings consisted of stock, 0.12% consisted of cash and 0.29% was in other assets, including dividends booked but not yet received. The following tables summarize the Real Estate Fund’s top holdings as of such date.

Top 10 Holdings as of June 21, 2012

Company	Percentage of Total Holdings
Simon Property Group, Inc.	9.09%
American Tower Corp.	5.48%
Public Storage	4.04%
Equity Residential	3.71%
HCP, Inc.	3.69%
Ventas, Inc.	3.62%
Annaly Capital Management, Inc.	3.41%
Boston Properties, Inc.	3.20%
Vornado Realty Trust	3.09%
Prologis Inc.	3.01%

The Dow Jones U.S. Real Estate Index

All information contained in this index supplement regarding the Dow Jones U.S. Real Estate Index, including, without limitation, its make-up, method of calculation and changes in its components, from publicly available information, without independent verification. This information reflects the policies of, and is subject to change by, Dow Jones & Company, Inc. (“**Dow Jones**”). The Dow Jones U.S. Real Estate Index is calculated, maintained and published by Dow Jones. Dow Jones is under no obligation to continue to publish, and may discontinue publication of, the Dow Jones U.S. Real Estate Index.

In November 2011, The McGraw-Hill Companies, Inc. (“**McGraw-Hill**”), the owner of the S&P Indices business, and CME Group Inc. (“**CME Group**”), the 90% owner of the CME Group and Dow Jones & Company, Inc. joint venture that owns the Dow Jones Indexes business, announced a new joint venture, S&P/Dow Jones Indices, which will own the S&P Indices business and the Dow Jones Indexes business. The ownership of the Dow Jones U.S. Real Estate Index may change as a result. A closing date has not yet been announced, but the joint venture, which remains subject to customary closing conditions, is targeted to be completed by the end of June 2012.

Dow Jones U.S. Real Estate Index Composition and Maintenance

The Dow Jones U.S. Real Estate Index measures the performance of the real estate sector of the United States equity market. Component companies include those that invest directly or indirectly in real estate through development, investment or ownership; companies that provide services to real estate companies but do not own the properties themselves (agencies, brokers, leasing companies, management companies and advisory services); and real estate investment trusts or corporations (“**REITs**”) or listed property trusts (“**LPTs**”) that invest in office, industrial, retail, residential, specialty (e.g., health care), hotel, lodging and other properties or that are directly involved in lending money to real estate owners and operators or indirectly through the purchase or mortgages or mortgage-backed securities. REITs are passive investment vehicles that invest primarily in income producing real estate or real estate-related loans and interests.

The Dow Jones U.S. Real Estate Index is one of the 19 supersector indices that make up the Dow Jones U.S. Index (formerly known as the Dow Jones U.S. Total Market Index). The Dow Jones U.S. Real Estate Index is a subset of the Dow Jones U.S. Financials Index, which in turn is a subset of the Dow Jones U.S. Index. The Dow Jones U.S. Index is part of the Dow Jones Global IndexSM family, which is a benchmark family that represents approximately 95% of the float-adjusted market capitalization of countries that are open to foreign investors. The Dow Jones Global IndexSM family represents approximately 50 countries. The Dow Jones U.S. Real Estate Index is a market capitalization weighted index in which only the shares of each company that are readily available to investors — the “float” — are counted.

Index component candidates must be common shares or other securities that have the characteristics of common equities. All classes of common shares, both fully and partially paid, are eligible. Fixed dividend shares and securities such as convertible notes, warrants, rights, mutual funds, unit investment trusts, closed-end fund shares and shares in limited partnerships are not eligible. Temporary issues arising from corporate actions, such as “when-issued shares,” are considered on a case-by-case basis when necessary to maintain continuity in a company’s index membership. REITs, LPTs and similar real-property-owning pass-through structures taxed as REITs by their domiciles also are eligible. Multiple classes of shares are included if each issue, on its own merit, meets the other eligibility criteria. Securities that have had more than ten non-trading days during the past quarter are excluded. Stocks in the top 95% of the index universe by float-adjusted market capitalization are selected as components of the Dow Jones U.S. Index, excluding stocks that fall within the bottom 1% of the universe by float-adjusted market capitalization and within the bottom 0.01% of the universe by turnover. To be included in the Dow Jones U.S. Real Estate Index, the issuer of the component securities must be classified in the Real Estate Sector of industry classifications as maintained by the Industry Classification Benchmark (“**ICB**”).

The Dow Jones U.S. Real Estate Index is reviewed by Dow Jones on a quarterly basis. Shares outstanding totals for component stocks are updated during the quarterly review. However, if the number of float-adjusted shares outstanding for an index component changes by more than 10% due to a corporate action, the shares total will be adjusted immediately after the close of trading on the date of the event. Whenever possible, Dow Jones will announce the change at least two business days prior to its implementation. Changes in shares outstanding due to stock dividends, splits and other corporate actions also are adjusted immediately after the close of trading on the day they become effective. Quarterly reviews are implemented during March, June, September and December. Both component changes and share changes become effective at the opening on the first Monday after the third Friday of the review month. Changes to the Dow Jones U.S. Real Estate Index are implemented after the official closing values have been established. All adjustments are made before the start of the next trading day. Constituent changes that result from the periodic review will be announced on the second Friday of the third month of each quarter (e.g., March, June, September and December).

In addition to the scheduled quarterly review, the Dow Jones U.S. Real Estate Index is reviewed on an ongoing basis. Changes in index composition and related weight adjustments are necessary whenever there are extraordinary events such as delistings, bankruptcies, mergers or takeovers involving index components. In these cases, each event will be taken into account as soon as it is effective. Whenever possible, the changes in the index components will be announced at least two business days prior to their implementation date. In the event that a component no longer meets the eligibility requirements, it will be removed from the Dow Jones U.S. Real Estate Index. You can find a list of the companies whose common stocks are currently included in the Dow Jones U.S. Real Estate Index on the Dow Jones website at <http://www.djindexes.com>. Information included in such website is not a part of this index supplement.

Background on the ICB

ICB, a joint classification system launched by FTSE Group and Dow Jones Indexes offers broad, global coverage of companies and securities and classifies them based on revenue, not earnings. ICB classifies the component stocks into groups of 10 industries, 19 supersectors, 41 sectors and 114 subsectors. The Real Estate Supersector is composed of two Sectors. The Real Estate Investment & Services Sector consists of companies that invest directly or indirectly in real estate through development, investment or ownership and companies that provide services to real estate companies but do not own the properties themselves. This Sector excludes REITs and similar entities. The Real Estate Investment Trusts Sector consists of REITs and similar entities.

BACKGROUND ON THE iSHARES[®] S&P GSCI[™] COMMODITY-INDEXED TRUST

All information contained in this index supplement regarding the iShares[®] S&P GSCI[™] Commodity-Indexed Trust (the “**Commodity-Indexed Trust**”) including, without limitation, its make-up, method of calculation and changes in its components, from publicly available information, without independent verification. This information reflects the policies of, and is subject to change by BlackRock Institutional Trust Company, N.A. (“**BTC**”), as trustee of the Commodity-Indexed Trust, and BlackRock Asset Management International Inc. (“**BAMI**”), as the sponsor and manager of the Commodity-Indexed Trust. The Commodity-Indexed Trust is a unit investment trust that issues units of beneficial interest, called “**Shares**,” representing fractional undivided beneficial interests in its net assets. Substantially all of the assets of the Commodity-Indexed Trust consist of interests in the iShares[®] S&P GSCI[™] Commodity-Indexed Investing Pool LLC (the “**Investing Pool**”), which holds long positions in futures contracts on the S&P GSCI[™] Excess Return Index. The Commodity-Indexed Trust is an exchange-traded fund (“**ETF**”) that trades on the NYSE Arca, Inc. (“**NYSE Arca**”) under the ticker symbol “**GSG**.”

Each of the Commodity-Indexed Trust and the Investing Pool is a commodity pool as defined in the Commodity Exchange Act and the regulations of the Commodity Futures Trading Commission (the “**CFTC**”). BAMI is a commodity pool operator registered with the CFTC. Neither the Commodity-Indexed Trust nor the Investing Pool is an investment company registered under the Investment Company Act. Information provided to or filed with the SEC by BAMI pursuant to the Securities Act of 1933, as amended, and the Securities Exchange Act of 1934, as amended, can be located by reference to SEC file number 001-32947, through the SEC’s website at <http://www.sec.gov>. For additional information regarding BTC, BAMI and the Commodity-Indexed Trust, please see the Commodity-Indexed Trust’s prospectus. In addition, information about BTC, BAMI and the Commodity-Indexed Trust may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents and the iShares[®] website at www.ishares.com. Information contained in the iShares[®] website is not incorporated by reference in, and should not be considered a part of, this index supplement.

Structure of the Commodity-Indexed Trust and the Investing Pool

The Commodity-Indexed Trust was formed as a Delaware statutory trust on July 7, 2006. Each Share represents a unit of fractional undivided beneficial interest in the net assets of the Commodity-Indexed Trust. Substantially all of the assets of the Commodity-Indexed Trust consist of its holdings of the limited liability company interests in the Investing Pool (“**Investing Pool Interests**”), which are the only securities in which the Commodity-Indexed Trust may invest.

The Investing Pool will issue Investing Pool Interests only to the Commodity-Indexed Trust and to BAMI, the manager of the Investing Pool. The Manager will maintain a limited equity interest in the Investing Pool with the balance of the Investing Pool owned by the Commodity-Indexed Trust. The Investing Pool will invest in long positions in futures contracts on the S&P GSCI[™] Excess Return Index, called CERFs, and post as margin cash or short-term securities to collateralize its CERF positions.

Each of the Commodity-Indexed Trust and the Investing Pool is a commodity pool as defined in the Commodity Exchange Act, and each entity is operated by BAMI, which is a commodity pool operator registered with the CFTC and is an indirect subsidiary of BlackRock, Inc. BlackRock Fund Advisors (“**BFA**”), which is an indirect subsidiary of BlackRock, Inc., serves as the commodity trading advisor of the Investing Pool and is registered with the CFTC.

Investment Objective

The investment objective of the Commodity-Indexed Trust is to seek investment results that correspond generally, but are not necessarily identical, to the performance of the S&P GSCI[™] Total Return Index before the payment of expenses and liabilities of the Commodity-Indexed Trust and the Investing Pool. The Investing Pool holds long positions in CERFs, which are futures contracts listed on the Chicago Mercantile Exchange, whose settlement at expiration is based on the value of the S&P GSCI[™] Excess Return Index at that time. The Investing Pool also earns interest on the assets used to collateralize its holdings of CERFs.

The S&P GSCI[™] Excess Return Index is calculated based on the same commodities that are included in the S&P GSCI[™] Commodity Index, which is a production-weighted index of the prices of a diversified group of futures contracts on physical commodities. The S&P GSCI[™] is administered, calculated and published by Standard & Poor’s Financial Services LLC, a division of The McGraw-Hill Companies, Inc. (“**S&P**”). The S&P GSCI[™] Excess Return

Index reflects the return of an uncollateralized investment in the contracts comprising the S&P GSCI™ and, in addition, incorporates the economic effect of “rolling” the contracts included in the S&P GSCI™ as they near expiration. “Rolling” a futures contract means closing out of a position in an expiring futures contract and establishing an equivalent position in the contract on the same commodity with the next expiration date. The S&P GSCI™ Total Return Index, in turn, reflects the return of the S&P GSCI™ Excess Return Index, together with the return on specified U.S. Treasury securities that are deemed to have been held to collateralize a hypothetical long position in the futures contracts comprising the S&P GSCI™. For further information about the S&P GSCI™ Total Return Index, please see “— The S&P GSCI™ Total Return Index” below.

If S&P ceases to maintain the S&P GSCI™ Total Return Index, the Commodity-Indexed Trust may seek investment results that correspond generally to the performance of a fully collateralized investment in a successor, or, in the opinion of BAMI, reasonably similar, index to the S&P GSCI™ Total Return Index.

The Commodity-Indexed Trust, through the Investing Pool, will be a passive investor in CERFs and the cash or short-term securities posted as margin to collateralize the Investing Pool’s CERF positions. Neither the Commodity-Indexed Trust nor the Investing Pool will engage in any activities designed to obtain a profit from, or to ameliorate losses caused by, changes in the value of the Investing Pool’s CERF positions or the short-term securities posted as margin.

The Investing Pool, and some other types of market participants, will be required to deposit margin with a value equal to 100% of the value of each CERF position at the time it is established. Interest paid on the collateral deposited as margin, net of expenses, will be reinvested by the Investing Pool or, at BAMI’s discretion, distributed from time to time to shareholders. The Investing Pool’s profit or loss on its CERF positions should correlate with increases and decreases in the value of the S&P GSCI™ Excess Return Index, although this correlation will not be exact. The interest on the collateral deposited by the Investing Pool as margin, together with the returns from the CERFs, is expected to result in a total return for the Investing Pool that corresponds generally, but is not identical to, the S&P GSCI™ Total Return Index. Differences between the returns of the Investing Pool and the S&P GSCI™ Total Return Index may be based on, among other factors, any differences between the return on the assets used by the Investing Pool to collateralize its CERF positions and the U.S. Treasury rate used to calculate the return component of the S&P GSCI™ Total Return Index, timing differences, differences between the portion of the Investing Pool’s assets invested in CERFs and the portion of the return of the S&P GSCI™ Total Return Index contributed by the S&P GSCI™ Excess Return Index, and the payment of expenses and liabilities by the Investing Pool. The net asset value of the Commodity-Indexed Trust will reflect the performance of the Investing Pool, its sole investment.

BFA will invest all of the Investing Pool’s assets in long positions in CERFs and post margin in the form of cash or short-term securities to collateralize the CERF positions. Any cash that the Investing Pool accepts as consideration from the Commodity-Indexed Trust for Investing Pool Interests will be used to purchase additional CERFs, in an amount that BFA determines will enable the Investing Pool to achieve investment results that correspond with the S&P GSCI™ Total Return Index, and to collateralize the CERFs. BFA will not engage in any activities designed to obtain a profit from, or to ameliorate losses caused by, changes in value of any of the commodities represented by the S&P GSCI™ or the positions or other assets held by the Investing Pool.

The S&P GSCI™ Total Return Index

All information contained in this index supplement regarding the S&P GSCI™ Total Return Index, including, without limitation, their make-up, method of calculation and changes in their components, from publicly available information, without independent verification. This information reflects the policies of, and is subject to change by, Standard & Poor’s Financial Services LLC (“S&P”), the publisher of the S&P GSCI™ Total Return Index. The S&P GSCI™ Total Return Index is determined, composed and calculated by S&P, without regard to the ETF Efficiente Index. S&P acquired the rights to the S&P GSCI™ and its related indices, including the S&P GSCI™ Total Return

Index, from Goldman, Sachs & Co. in 2007. Goldman, Sachs & Co. established and began calculating the S&P GSCI™ in May 1991. The former name of the S&P GSCI™ was the Goldman Sachs Commodity Index, or GSCI®. S&P has no obligation to continue to publish, and may discontinue publication of, the S&P GSCI™ Total Return Index.

In November 2011, The McGraw-Hill Companies, Inc. (“**McGraw-Hill**”), the owner of the S&P Indices business, and CME Group Inc. (“**CME Group**”), the 90% owner of the CME Group and Dow Jones & Company, Inc. joint venture that owns the Dow Jones Indexes business, announced a new joint venture, S&P/Dow Jones Indices, which will own the S&P Indices business and the Dow Jones Indexes business. The ownership of the S&P GSCI™ Total Return Index may change as a result. A closing date has not yet been announced, but the joint venture, which remains subject to customary closing conditions, is targeted to be completed by the end of June 2012.

S&P publishes excess return and total return versions of the S&P GSCI™. The excess return version of the S&P GSCI™ is based on price levels of the futures contracts included in the S&P GSCI™ as well as the discount or premium obtained by “rolling” hypothetical positions in such contracts forward as they approach delivery. The total return version of the S&P GSCI™ incorporates the returns of the excess return version, except that the total return version also reflects interest earned on hypothetical, fully collateralized contract positions on the included commodities.

The S&P GSCI™ is an index on a world production-weighted basket of principal non-financial commodities (*i.e.*, physical commodities) that satisfy specified criteria. The S&P GSCI™ is designed to be a measure of the performance over time of the markets for these commodities. The only commodities represented in the S&P GSCI™ are those physical commodities on which active and liquid contracts are traded on trading facilities in major industrialized countries. The commodities included in the S&P GSCI™ are weighted, on a production basis, to reflect the relative significance (in the view of S&P, as described below) of such commodities to the world economy. The fluctuations in the value of the S&P GSCI™ are intended generally to correlate with changes in the prices of such physical commodities in global markets. The S&P GSCI™ has been normalized such that its hypothetical level on January 2, 1970 was 100. Futures contracts on the S&P GSCI™, and options on such futures contracts, are currently listed for trading on the Chicago Mercantile Exchange.

The S&P GSCI™ Total Return Index reflects the value of an investment in the S&P GSCI Excess Return Index together with a Treasury bill return. Because the S&P GSCI™ Total Return Index is a total return version of the S&P GSCI™, the methodology for compiling the S&P GSCI™ relates as well to the methodology of compiling the S&P GSCI™ Total Return.

Set forth below is a summary of the methodology used to calculate the S&P GSCI™ and, accordingly, the S&P GSCI™ Total Return Index. Since the S&P GSCI™ is the base index for the S&P GSCI™ Total Return Index, the methodology for compiling the S&P GSCI™ relates as well to the methodology of compiling the S&P GSCI™ Total Return Index. S&P makes the official calculations of the S&P GSCI™ and the S&P GSCI™ Total Return Index.

The Index Committee and the Index Advisory Panel

S&P has established an index committee (the “**Index Committee**”) to oversee the daily management and operations of the S&P GSCI™, and is responsible for all analytical methods and calculation of the S&P GSCI™ and its related indices. The Index Committee consists of full-time professional members of S&P’s staff. At each meeting, the Index Committee reviews any issues that may affect index constituents, statistics comparing the composition of the indices to the market, commodities that are being considered as candidates for an addition to an index, and any significant market events. In addition, the Index Committee may revise index policy covering rules for selecting commodities or other matters.

S&P considers information about changes to its indices and related matters to be potentially market-moving and material. Therefore, all Index Committee discussions are confidential.

S&P has established an index advisory panel (the “**Advisory Panel**”) to assist it in connection with the operation of the S&P GSCI™. The Advisory Panel meets on an annual basis and at other times at the request of the Index Committee. The principal purpose of the Advisory Panel is to advise S&P with respect to, among other things, the calculation of the S&P GSCI™, the effectiveness of the S&P GSCI™ as a measure of commodity futures market performance and the need for changes in the composition or in the methodology of the S&P GSCI™. The Advisory

Panel acts solely in an advisory and consultative capacity; the Index Committee makes all decisions with respect to the composition, calculation and operation of the S&P GSCI™.

Composition of the S&P GSCI™

In order to be included in the S&P GSCI™, a contract must satisfy the following eligibility criteria:

- the contract must be in respect of a physical commodity and not a financial commodity;
- the contract must have a specified expiration or term or provide in some other manner for delivery or settlement at a specified time, or within a specified period, in the future;
- the contract must, at any given point in time, be available for trading at least five months prior to its expiration or such other date or time period specified for delivery or settlement;
- the contract must be traded on an exchange, facility or other platform (referred to as a “trading facility”) that allows market participants to execute spread transactions, through a single order entry, between the pairs of contract expirations included in the S&P GSCI™ that, at any given point in time, will be involved in the rolls to be effected in the next three roll periods (defined below);
- the contract must be denominated in U.S. dollars; and
- the contract must be traded on or through a trading facility that has its principal place of business or operations in a country that is a member of the Organization for Economic Cooperation and Development and that:
 - makes price quotations generally available to its members or participants (and to S&P) in a manner and with a frequency that is sufficient to provide reasonably reliable indications of the level of the relevant market at any given point in time;
 - makes reliable trading volume information available to S&P with at least the frequency required by S&P to make the monthly determinations;
 - accepts bids and offers from multiple participants or price providers; and
 - is accessible by a sufficiently broad range of participants.

The price of the relevant contract that is used as a reference or benchmark by market participants (referred to as the “**daily contract reference price**”) generally must have been available on a continuous basis for at least two years prior to the proposed date of inclusion in the S&P GSCI™. In appropriate circumstances, S&P may determine that a shorter time period is sufficient or that historical daily contract reference prices for such contract may be derived from daily contract reference prices for a similar or related contract. The daily contract reference price may be (but is not required to be) the settlement price or other similar price published by the relevant trading facility for purposes of margining transactions or for other purposes.

At and after the time a contract is included in the S&P GSCI™, the daily contract reference price for such contract must be published between 10:00 a.m. and 4:00 p.m., New York City time, on each business day relating to such contract by the trading facility on or through which it is traded and must generally be available to all members of, or participants in, such facility (and to S&P) on the same day from the trading facility or through a recognized third-party data vendor. Such publication must include, at all times, daily contract reference prices for at least one expiration or settlement date that is five months or more from the date the determination is made, as well as for all expiration or settlement dates during such five-month period.

For a contract to be eligible for inclusion in the S&P GSCI™, volume data with respect to such contract must be available for at least the three months immediately preceding the date on which the determination is made. The following eligibility criteria apply:

- In order to be added to the S&P GSCI™, a contract that is not included in the S&P GSCI™ at the time of determination and that is based on a commodity that is not represented in the S&P GSCI™ at such time must have an annualized total dollar value traded over the relevant period of at least U.S. \$15 billion. The total dollar value traded is the dollar value of the total quantity of the commodity underlying transactions in the relevant contract over the period for which the calculation is made, based on the average of the daily contract reference prices on the last day of each month during the period.
- In order to continue to be included in the S&P GSCI™, a contract that is already included in the S&P GSCI™ at the time of determination and that is the only contract on the relevant commodity included in the S&P GSCI™ must have an annualized total dollar value traded of at least U.S. \$5 billion over the relevant period and of at least U.S. \$10 billion during at least one of the three most recent annual periods used in making the determination.
- In order to be added to the S&P GSCI™, a contract that is not included in the S&P GSCI™ at the time of determination and that is based on a commodity on which there are one or more contracts already included in the S&P GSCI™ at such time must have an annualized total dollar value traded over the relevant period of at least U.S. \$30 billion.
- In order to continue to be included in the S&P GSCI™, a contract that is already included in the S&P GSCI™ at the time of determination and that is based on a commodity on which there are one or more contracts already included in the S&P GSCI™ at such time must have an annualized total dollar value traded, over the relevant period of at least U.S. \$10 billion over the relevant period and of at least U.S. \$20 billion during at least one of the three most recent annual periods used in making the determination.

In addition to the volume requirements described above, a contract must have a minimum reference percentage dollar weight:

- In order to continue to be included in the S&P GSCI™, a contract that is already included in the S&P GSCI™ at the time of determination must have a reference percentage dollar weight of at least 0.10%. The reference percentage dollar weight of a contract is determined by multiplying the CPW (defined below) of a contract by the average of its daily contract reference prices on the last day of each month during the relevant period. These amounts are summed for all contracts included in the S&P GSCI™ and each contract's percentage of the total is then determined.
- In order to be added to the S&P GSCI™, a contract that is not included in the S&P GSCI™ at the time of determination must have a reference percentage dollar weight of at least 1.00% at the time of determination.

In the event that two or more contracts on the same commodity satisfy the eligibility criteria, such contracts are included in the S&P GSCI™ in the order of their respective total quantity traded during the relevant period (determined as the total quantity of the commodity underlying transactions in the relevant contract), with the contract having the highest total quantity traded being included first. No further contracts are included if such inclusion results in the portion of the S&P GSCI™ attributable to such commodity exceeding a particular level.

If under the procedure set forth in the preceding paragraph, additional contracts could be included with respect to several commodities at the same time, the procedure is first applied to the commodity that has the smallest portion of the S&P GSCI™ attributable to it at the time of determination. Subject to the other eligibility criteria, the contract with the highest total quantity traded on such commodity is included. Before any additional contracts on any commodity are included, the portion of the S&P GSCI™ attributable to all commodities is recalculated. The selection procedure described above is then repeated with respect to the contracts on the commodity that then has the smallest portion of the S&P GSCI™ attributable to it.

The contracts currently included in the S&P GSCI™ are all futures contracts traded on the New York Mercantile Exchange, Inc. (“NYMEX”), ICE Futures Europe (“ICE-Europe”), ICE Futures U.S. (“ICE-US”), the Chicago Mercantile Exchange (“CME”), the Chicago Board of Trade (“CBOT”), the Kansas City Board of Trade (“KBT”), the Commodities Exchange Inc. (“CMX”) and the London Metal Exchange (“LME”).

The quantity of each of the contracts included in the S&P GSCI™ is determined on the basis of a five-year average (referred to as the “world production average”) of the production quantity of the underlying commodity from sources determined by S&P to be reasonably accurate and reliable, such as the United Nations Industrial Commodity Statistics Yearbook. However, if a commodity is primarily a regional commodity, based on its production, use, pricing, transportation or other factors, S&P may calculate the weight of such commodity based on regional, rather than world, production data. At present, natural gas is the only commodity the weight of which is calculated on the basis of regional production data, with the relevant region being North America.

The five-year moving average is updated annually for each commodity included in the S&P GSCI™, based on the most recent five-year period (ending approximately two years prior to the date of calculation and moving backwards) for which complete data for all commodities is available. The contract production weights (the “CPWs”) used in calculating the S&P GSCI™ are derived from world or regional production averages, as applicable, of the relevant commodities, and are calculated based on the total quantity traded for the relevant contract and the world or regional production average, as applicable, of the underlying commodity. However, if the volume of trading in the relevant contract, as a multiple of the production levels of the commodity, is below specified thresholds, the CPW of the contract is reduced until the threshold is satisfied. This is designed to ensure that trading in each such contract is sufficiently liquid relative to the production of the commodity.

In addition, S&P performs this calculation on a monthly basis and, if the multiple of any contract is below the prescribed threshold, the composition of the S&P GSCI™ is reevaluated, based on the criteria and weighting procedure described above. This procedure is undertaken to allow the S&P GSCI™ to shift from contracts that have lost substantial liquidity into more liquid contracts, during the course of a given year. As a result, it is possible that the composition or weighting of the S&P GSCI™ will change on one or more of these monthly evaluation dates. In addition, regardless of whether any changes have occurred during the year, S&P reevaluates the composition of the S&P GSCI™ at the conclusion of each year, based on the above criteria. Other commodities that satisfy such criteria, if any, will be added to the S&P GSCI™. Commodities included in the S&P GSCI™ that no longer satisfy such criteria, if any, will be deleted.

S&P also determines whether modifications in the selection criteria or the methodology for determining the composition and weights of and for calculating the S&P GSCI™ are necessary or appropriate in order to assure that the S&P GSCI™ represents a measure of commodity market performance. S&P has the discretion to make any such modifications.

Contract Expirations

Because the S&P GSCI™ comprises actively traded contracts with scheduled expirations, it can only be calculated by reference to the prices of contracts for specified expiration, delivery or settlement periods, referred to as “contract expirations.” The contract expirations included in the S&P GSCI™ for each commodity during a given year are designated by S&P, provided that each such contract must be an “active contract.” An “active contract” for this purpose is a liquid, actively traded contract expiration, as defined or identified by the relevant trading facility or, if no such definition or identification is provided by the relevant trading facility, as defined by standard custom and practice in the industry.

If a trading facility deletes one or more contract expirations, the S&P GSCI™ will be calculated during the remainder of the year in which such deletion occurs based on the remaining contract expirations designated by S&P. If a trading facility ceases trading in all contract expirations relating to a particular contract, S&P may designate an eligible replacement contract on the commodity. To the extent practicable, the replacement will be in effect during the next monthly review of the composition of the S&P GSCI™. If that timing is not practicable, S&P will determine the date of the replacement and will consider a number of factors, including the differences between the existing contract and the replacement contract specifications and contract expirations.

Value of the S&P GSCI™

The value of the S&P GSCI™ on any given day is equal to the total dollar weight of the S&P GSCI™ divided by a normalizing constant that assures the continuity of the S&P GSCI™ over time. The total dollar weight of the S&P GSCI™ is the sum of the dollar weight of each of the underlying commodities.

The dollar weight of each such commodity on any given day is equal to:

- the “daily contract reference price” (discussed below),
- multiplied by the appropriate CPWs, and
- during a roll period, the appropriate “roll weights” (discussed below).

The daily contract reference price used in calculating the dollar weight of each commodity on any given day is the most recent daily contract reference price made available by the relevant trading facility, except that the daily contract reference price for the most recent prior day will be used if the exchange is closed or otherwise fails to publish a daily contract reference price on that day. In addition, if the trading facility fails to make a daily contract reference price available or publishes a daily contract reference price that, in the reasonable judgment of S&P, reflects manifest error, the relevant calculation will be delayed until the price is made available or corrected; provided that, if the price is not made available or corrected by 4:00 p.m., New York City time, S&P may, if it deems such action to be appropriate under the circumstances, determine the appropriate daily contract reference price for the applicable futures contract in its reasonable judgment for purposes of the relevant S&P GSCI™ calculation.

The “roll weight” of each commodity reflects the fact that the positions in contracts must be liquidated or rolled forward into more distant contract expirations as they approach expiration. If actual positions in the relevant markets were rolled forward, the roll would likely need to take place over a period of days. Since the S&P GSCI™ is designed to replicate the performance of actual investments in the underlying contracts, the rolling process incorporated in the S&P GSCI™ also takes place over a period of days at the beginning of each month (referred to as the “roll period”). On each day of the roll period, the “roll weights” of the first nearby contract expiration on a particular commodity and the more distant contract expiration into which it is rolled are adjusted, so that the hypothetical position in the contract on the commodity that is included in the S&P GSCI™ is gradually shifted from the first nearby contract expiration to the more distant contract expiration.

If on any day during a roll period any of the following conditions exists, the portion of the roll that would have taken place on that day is deferred until the next day on which such conditions do not exist:

- no daily contract reference price is available for a given contract expiration;
- any such price represents the maximum or minimum price for such contract month, based on exchange price limits (referred to as a “**Limit Price**”);
- the daily contract reference price published by the relevant trading facility reflects manifest error, or such price is not published by 4:00 p.m., New York City time. In that event, S&P may, but is not required to, determine a daily contract reference price and complete the relevant portion of the roll based on such price; *provided, that*, if the trading facility publishes a price before the opening of trading on the next day, S&P will revise the portion of the roll accordingly; or
- trading in the relevant contract terminates prior to its scheduled closing time.

If any of these conditions exist throughout the roll period, the roll with respect to the affected contract will be effected in its entirety on the next day on which such conditions no longer exist.

Contract Daily Return

The contract daily return on any given day is equal to the sum, for each of the commodities included in the S&P GSCI™, of the applicable daily contract reference price on the relevant contract multiplied by the appropriate CPW and the appropriate “roll weight,” divided by the total dollar weight of the S&P GSCI™ on the preceding day, minus one.

Calculation of the S&P GSCI™ Total Return Index

The value of the S&P GSCI™ Total Return Index on any S&P GSCI™ Business Day reflects the value of an investment in the S&P GSCI™ together with a Treasury bill return and is equal to the product of:

- the value of the S&P GSCI™ Total Return Index on the immediately preceding S&P GSCI™ Business Day;
- one plus the sum of the contract daily return and the Treasury Bill return on the S&P GSCI™ Business Day on which the calculation is made; and
- one plus the Treasury Bill return for each non-S&P GSCI™ Business Day since the immediately preceding S&P GSCI™ Business Day. The Treasury Bill return is the return on a hypothetical investment in the S&P GSCI™ Total Return Index at a rate equal to the interest rate on a specified U.S. Treasury Bill.

The initial value of the S&P GSCI™ Total Return Index was normalized such that its hypothetical level on January 2, 1970 was 100.

Information

All information contained herein relating to the S&P GSCI™ and the S&P GSCI™ Total Return Index, including their make-up, method of calculation, changes in their components and historical performance, has been derived from publicly available information. The information contained herein with respect to the S&P GSCI™ and the S&P GSCI™ Total Return Index reflects the policies of, and is subject to change by, S&P.

Current information regarding the market values of the S&P GSCI™ and of the S&P GSCI™ Total Return Index are available from S&P and from numerous public information sources.

The Commodity Futures Markets

Contracts on physical commodities are traded on regulated futures exchanges, in the over the counter market and on various types of physical and electronic trading facilities and markets. All of the contracts included in the S&P GSCI™ Total Return Index are exchange-traded futures contracts. An exchange-traded futures contract is a bilateral agreement providing for the purchase and sale of a specified type and quantity of a commodity or financial instrument during a stated delivery month for a fixed price. A futures contract on an index of commodities typically provides for the payment and receipt of a cash settlement based on the value of such commodities. A futures contract provides for a specified settlement month in which the commodity or financial instrument is to be delivered by the seller (whose position is described as “short”) and acquired by the purchaser (whose position is described as “long”) or in which the cash settlement amount is to be made.

There is no purchase price paid or received on the purchase or sale of a futures contract. Instead, an amount of cash or cash equivalents must be deposited with the broker as “initial margin.” This amount varies based on the requirements imposed by the exchange clearing houses, but may be as low as 5% or less of the value of the contract. This margin deposit provides collateral for the obligations of the parties to the futures contract.

By depositing margin in the most advantageous form (which may vary depending on the exchange, clearing house or broker involved), a market participant may be able to earn interest on its margin funds, thereby increasing the potential total return that may be realized from an investment in futures contracts. The market participant normally makes to, and receives from, the broker subsequent payments on a daily basis as the price of the futures contract fluctuates. These payments are called “variation margin” and make the existing positions in the futures contract more or less valuable, a process known as “marking to market.”

Futures contracts are traded on organized exchanges, known as “contract markets” in the United States, through the facilities of a centralized clearing house and a brokerage firm which is a member of the clearing house. The clearing

house guarantees the performance of each clearing member which is a party to the futures contract by, in effect, taking the opposite side of the transaction. At any time prior to the expiration of a futures contract, subject to the availability of a liquid secondary market, a trader may elect to close out its position by taking an opposite position on the exchange on which the trader obtained the position. This operates to terminate the position and fix the trader's profit or loss.

U.S. contract markets, as well as brokers and market participants, are subject to regulation by the Commodity Futures Trading Commission. Futures markets outside the United States are generally subject to regulation by comparable regulatory authorities. However, the structure and nature of trading on non U.S. exchanges may differ from the foregoing description. From its inception to the present, the S&P GSCI™ Total Return Index has been composed exclusively of futures contracts traded on regulated exchanges.

BACKGROUND ON THE SPDR[®] GOLD TRUST

All information contained in this index supplement regarding the SPDR[®] Gold Trust (the “**Gold Trust**”), including, without limitation, its structure, the creation and redemption of its shares and their valuation, from publicly available information, without independent verification. This information reflects the policies of, and is subject to change by, the Gold Trust and World Gold Trust Services, LLC, the sponsor of the Gold Trust. BNY Mellon Asset Servicing, a division of The Bank of New York Mellon, is the trustee of the Gold Trust, and HSBC Bank USA, N.A. is the custodian of the Gold Trust. The Gold Trust is an investment trust, formed on November 12, 2004. The Gold Trust trades under the ticker symbol “GLD” on the NYSE Arca, Inc. (“**NYSE Arca**”).

Information provided to or filed with the Securities and Exchange Commission (the “**SEC**”) by the Gold Trust pursuant to the Securities Act of 1933, as amended, and the Exchange Act can be located by reference to SEC file numbers 333-153150 and 001-32356, respectively, through the SEC’s website at <http://www.sec.gov>. For additional information regarding the Gold Trust, please see the Gold Trust’s prospectus. In addition, information about the Gold Trust may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents and the public website of the Gold Trust maintained by the sponsor at <http://www.spdrgoldshares.com>. Information contained in the SPDR[®] Gold Trust website is not incorporated by reference in, and should not be considered a part of, this index supplement.

Investment Objective and Overview

The investment objective of the Gold Trust is to reflect the performance of the price of gold bullion, less the expenses of the Gold Trust’s operations. The Gold Trust holds gold bars. The shares of the Gold Trust (“**Shares**”) are intended to offer investors an opportunity to participate in the gold market through an investment in securities. The ownership of the Shares is intended to overcome certain barriers to entry in the gold market, such as the logistics of buying, storing and insuring gold.

The Shares represent units of fractional undivided beneficial interest in and ownership of the Gold Trust. The Gold Trust is not managed like a corporation or an active investment vehicle. The gold held by the Gold Trust will be sold only: (1) on an as-needed basis to pay the Gold Trust’s expenses, (2) in the event the Gold Trust terminates and liquidates its assets, or (3) as otherwise required by law or regulation.

The Gold Trust’s assets only consist of allocated gold bullion, gold receivable when recorded (representing gold covered by contractually binding orders for the creation of Shares where the gold has not yet been transferred to the Gold Trust’s account) and, from time to time, cash, which will be used to pay expenses.

Creation and Redemption

The Gold Trust creates and redeems the Shares from time to time, but only in one or more baskets (a “**Basket**” equals a block of 100,000 Shares). The creation and redemption of Baskets requires the delivery to the Gold Trust or the distribution by the Gold Trust of the amount of gold and any cash represented by the Baskets being created or redeemed, the amount of which is based on the combined net asset value of the number of Shares included in the Baskets being created or redeemed. The initial amount of gold required for deposit with the Gold Trust to create Shares for the period from the formation of the Gold Trust to the first day of trading of the Shares on the NYSE was 10,000 ounces per Basket. The number of ounces of gold required to create a Basket or to be delivered upon the redemption of a Basket gradually decreases over time, due to the accrual of the Gold Trust’s expenses and the sale of the Gold Trust’s gold to pay the Gold Trust’s expenses. Baskets may be created or redeemed only by authorized participants, who pay a transaction fee for each order to create or redeem Baskets and may sell the Shares included in the Baskets they create to other investors.

Valuation of Gold; Computation of Net Asset Value

The Net Asset Value (“**NAV**”) of the Gold Trust is the aggregate value of the Gold Trust’s assets less its liabilities (which include estimated accrued but unpaid fees and expenses). In determining the NAV of the Gold Trust, the trustee values the gold held by the Gold Trust on the basis of the price of an ounce of gold as set by the afternoon session of the twice daily fix of the price of an ounce of gold which starts at 3:00 PM London, England time and is performed by the five members of the London gold fix. The trustee determines the NAV of the Gold Trust on each day the NYSE Arca is

open for regular trading, at the earlier of the London PM Fix for the day or 12:00 PM New York time. If no London PM Fix is made on a particular evaluation day or if the London PM Fix has not been announced by 12:00 PM New York time on a particular evaluation day, the next most recent London gold price fix (AM or PM) is used in the determination of the NAV of the Gold Trust, unless the trustee, in consultation with the sponsor, determines that such price is inappropriate to use as the basis for such determination. The trustee also determines the NAV per Share, which equals the NAV of the Gold Trust, divided by the number of outstanding Shares.

Termination of the SPDR® Gold Trust

The sponsor may, and it is anticipated that the sponsor will, direct the trustee to terminate and liquidate the Gold Trust at any time after the first anniversary of the Gold Trust's formation when the NAV of the Gold Trust is less than \$350 million (as adjusted for inflation). The sponsor may also direct the trustee to terminate the Gold Trust if the Commodity Futures Trading Commission, or the CFTC, determines that the Gold Trust is a commodity pool under the Commodity Exchange Act of 1936, as amended, or the CEA. The trustee may also terminate the Gold Trust upon the agreement of shareholders owning at least 66 2/3% of the outstanding Shares.

The trustee will terminate and liquidate the Gold Trust if any of the following events occur:

- the Depository Trust Company, the securities depository for the Shares, is unwilling or unable to perform its functions under the Gold Trust indenture and no suitable replacement is available;
- the Shares are de-listed from the NYSE Arca and are not listed for trading on another U.S. national securities exchange or through the NASDAQ Stock Market within five business days from the date the Shares are de-listed;
- the NAV of the Gold Trust remains less than \$50 million for a period of 50 consecutive business days;
- the sponsor resigns or is unable to perform its duties or becomes bankrupt or insolvent and the trustee has not appointed a successor and has not itself agreed to act as sponsor;
- the trustee resigns or is removed and no successor trustee is appointed within 60 days;
- the custodian resigns and no successor custodian is appointed within 60 days;
- the sale of all of the Gold Trust's assets;
- the Gold Trust fails to qualify for treatment, or ceases to be treated, for US federal income tax purposes, as a grantor trust; or
- the maximum period for which the Gold Trust is allowed to exist under New York law ends.

Upon the termination of the Gold Trust, the trustee will, within a reasonable time after the termination of the Gold Trust, sell the Gold Trust's gold bars and, after paying or making provision for the Gold Trust's liabilities, distribute the proceeds to the shareholders.

Disclaimer

The Shares are neither interests in nor obligations of the sponsor, the trustee or State Street Global Markets, LLC, as the marketing agent. The ETF Efficient Index is not sponsored, endorsed, sold, or promoted by the sponsor, the trustee or the marketing agent. The sponsor, the trustee and the marketing agent make no representations or warranties to anyone or any member of the public regarding the advisability of investing in the ETF Efficient Index. None of the sponsor, the trustee or the marketing agent has any obligation or liability in connection with the operation, marketing, trading or sale of the ETF Efficient Index.

Gold

The price of gold is primarily affected by the global demand for and supply of gold. The market for gold bullion is global, and gold prices are subject to volatile price movements over short periods of time and are affected by numerous factors, including macroeconomic factors such as the structure of and confidence in the global monetary system, expectations regarding the future rate of inflation, the relative strength of, and confidence in, the U.S. dollar (the currency in which the price of gold is usually quoted), interest rates, gold borrowing and lending rates and global or regional economic, financial, political, regulatory, judicial or other events. Gold prices may be affected by industry factors such as industrial and jewelry demand as well as lending, sales and purchases of gold by the official sector, including central banks and other governmental agencies and multilateral institutions that hold gold. Additionally, gold prices may be affected by levels of gold production, production costs and short-term changes in supply and demand due to trading activities in the gold market.

BACKGROUND ON THE iSHARES® BARCLAYS TIPS BOND FUND

All information contained in this index supplement regarding the iShares® Barclays TIPS Bond Fund (the “**TIPS Fund**”), including, without limitation, its make-up, method of calculation and changes in its components, from publicly available information, without independent verification. This information reflects the policies of, and is subject to change by, iShares®, Inc. (“**iShares®**”), iShares® Trust, BlackRock Institutional Trust Company, N.A. (“**BTC**”) and BlackRock Fund Advisors (“**BFA**”). BFA is currently the investment adviser to the TIPS Fund and is a wholly owned subsidiary of BTC, which in turn is a wholly owned subsidiary of BlackRock, Inc. The TIPS Fund is an exchange-traded fund (“**ETF**”) that trades on the NYSE Arca, Inc. (“**NYSE Arca**”) under the ticker symbol “**TIP**.”

iShares® Trust is a registered investment company that consists of numerous separate investment portfolios, including the TIPS Fund. Information provided to or filed with the SEC by iShares® Trust pursuant to the Securities Act of 1933, as amended, and the Investment Company Act of 1940, as amended, can be located by reference to SEC file numbers 333-92935 and 811-09729, respectively, through the SEC’s website at <http://www.sec.gov>. For additional information regarding iShares® Trust, BFA and the TIPS Fund, please see the TIPS Fund’s prospectus. In addition, information about the TIPS Fund may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents and the iShares® website. Information contained in the iShares® website is not incorporated by reference in, and should not be considered a part of, this index supplement.

Investment Objective and Strategy

The TIPS Fund seeks to provide investment results that correspond generally to the price and yield performance, before fees and expenses, of the Barclays Capital U.S. Treasury Inflation Protected Securities (TIPS) Index (Series-L) (the “**Barclays TIPS Index**”). Inflation-protected public obligations of the U.S. Treasury, commonly known as “**TIPS**,” are securities issued by the U.S. Treasury that are designed to provide inflation protection to investors. TIPS are income-generating instruments the interest and principal payments of which are adjusted for inflation — a sustained increase in prices that erodes the purchasing power of money. The inflation adjustment, which is typically applied monthly to the principal of the bond, follows a designated inflation index, such as the consumer price index. A fixed coupon rate is applied to the inflation-adjusted principal so that as inflation rises, both the principal value and the interest payments increase. This can provide investors with a hedge against inflation, as it helps preserve the purchasing power of an investment. Because of this inflation adjustment feature, inflation-protected bonds typically have lower yields than conventional fixed-rate bonds.

BFA uses a “passive” or indexing approach to try to achieve the investment objective of the TIPS Fund. The TIPS Fund does not try to “beat” the index it tracks and does not seek temporary defensive positions when markets decline or appear overvalued. The TIPS Fund uses a representative sampling indexing strategy (as described below under “—**Representative Sampling**”) to try to track the Barclays TIPS Index.

The TIPS Fund may or may not hold all of the securities in the Barclays TIPS Index. The TIPS Fund generally invests at least 90% of its assets in the bonds included in the Barclays TIPS Index and at least 95% of its assets in U.S. government bonds. The TIPS Fund may invest up to 10% of its assets in U.S. government bonds not included in the Barclays TIPS Index, but which BFA believes will help the TIPS Fund track the Barclays TIPS Index. The TIPS Fund also may invest up to 5% of its assets in repurchase agreements collateralized by U.S. government obligations and in cash and cash equivalents, including shares of money market funds advised by BFA.

Representative Sampling

Representative sampling involves investing in a representative sample of securities that collectively has an investment profile similar to the Barclays TIPS Index. The securities selected are expected to have, in the aggregate, investment characteristics (based on market capitalization and industry weightings), fundamental characteristics (such as return variability, duration, maturity or credit ratings and yield) and liquidity measures similar to those of the Barclays TIPS Index.

Correlation

The Barclays TIPS Index is a theoretical financial calculation, while the TIPS Fund is an actual investment portfolio. The performance of the TIPS Fund and the Barclays TIPS Index may vary due to transaction costs, non-U.S. currency valuation, asset valuations, corporate actions (such as mergers and spin-offs), timing variances and differences between the TIPS Fund's portfolio and the Barclays TIPS Index resulting from legal restrictions (such as diversification requirements) that apply to the TIPS Fund but not to the Barclays TIPS Index or to the use of representative sampling. "Tracking error" is the difference between the performance (return) of the TIPS Fund's portfolio and that of the Barclays TIPS Index. BFA expects that, over time, the TIPS Fund's tracking error will not exceed 5%. Because the TIPS Fund uses a representative sampling indexing strategy, it can be expected to have a larger tracking error than if it used a replication indexing strategy. "Replication" is an indexing strategy in which a fund invests in substantially all of the securities in its underlying index in approximately the same proportions as in the underlying index.

Concentration Policy

The TIPS Fund will concentrate its investments (*i.e.*, hold 25% or more of its total assets) in a particular industry or group of industries to approximately the same extent that the Barclays TIPS Index is concentrated. For purposes of this limitation, securities of the U.S. government (including its agencies and instrumentalities), repurchase agreements collateralized by U.S. government securities and securities of state or municipal governments and their political subdivisions are not considered to be issued by members of any industry.

Holdings Information

The holding information for the TIPS Fund is updated on a daily basis. As of June 21, 2012, 99.01% of the TIPS Fund's holdings consisted of bonds, 0.44% consisted of cash and 0.52% was in other assets, including dividends booked but not yet received. The following tables summarize the top 10 holdings of the TIPS Fund as of such date.

Top 10 Holdings as of June 21, 2012

Security	Percentage of Total Holdings
U.S. Treasury (CPI) Note, 01/15/2021, 1.12%	6.98%
U.S. Treasury (CPI) Note, 01/15/2016, 2.00%	4.98%
U.S. Treasury (CPI) Note, 07/15/2021, 0.62%	4.94%
U.S. Treasury (CPI) Note, 01/15/2025, 2.38%	4.50%
U.S. Treasury (CPI) Note, 07/15/2020, 1.25%	4.44%
U.S. Treasury (CPI) Note, 02/15/2041, 2.12%	4.43%
U.S. Treasury (CPI) Note, 04/15/2029, 3.88%	4.38%
U.S. Treasury (CPI) Note, 04/15/2028, 3.62%	3.94%
U.S. Treasury (CPI) Note, 01/15/2021, 1.12%	6.98%
U.S. Treasury (CPI) Note, 01/15/2016, 2.00%	4.98%

Disclaimer

The ETF Efficiente Index is not sponsored, endorsed, sold or promoted by BTC. BTC makes no representations or warranties to any member of the public regarding the advisability of investing in the ETF Efficiente Index. BTC has no obligation or liability in connection with the operation, marketing, trading or sale of the ETF Efficiente Index.

The Barclays Capital U.S. Treasury Inflation Protected Securities (TIPS) Index (Series-L)

All information contained in this index supplement regarding the Barclays TIPS Index, including, without limitation, its make-up, method of calculation and changes in its components, from publicly available information,

without independent verification. This information reflects the policies of, and is subject to change by, Barclays Capital Inc. (“**BCI**”). The Barclays TIPS Index is a bond index calculated, published and disseminated by BCI. BCI is under no obligation to continue to publish, and may discontinue publication of, the Barclays TIPS Index.

The Barclays Capital U.S. Treasury Inflation Protected Securities (TIPS) Index (Series-L) measures the performance of inflation-protected securities issued by the U.S. Treasury known as “**TIPS**.” The Barclays Capital U.S. Treasury Inflation Protected Securities (TIPS) Index (Series-L) is market capitalization weighted, includes all publicly issued U.S. inflation-protected securities that meet the criteria for inclusion and is rebalanced once a month on the last calendar day of the month. TIPS are indexed to the non-seasonally adjusted Consumer Price Index for All Urban Consumers, or the CPI-U.

Eligibility Criteria

In order to be eligible for inclusion in the Barclays Capital U.S. Treasury Inflation Protected Securities (TIPS) Index (Series-L), securities must have \$250 million or more of outstanding face value. U.S. Treasuries held in the Federal Reserve SOMA account (both purchases at issuance and net secondary market transactions) are deducted from the total amount outstanding. Any issuance bought at auction by the Federal Reserve does not enter the Barclays Capital U.S. Treasury Inflation Protected Securities (TIPS) Index (Series-L). Net secondary market purchases and sales are adjusted at each month-end with a one-month lag.

The U.S. inflation-protected securities included in the Barclays Capital U.S. Treasury Inflation Protected Securities (TIPS) Index (Series-L) must be rated investment grade (Baa3/BBB-/BBB-) or higher using the middle rating of Moody’s, S&P and Fitch after dropping the highest and lowest available ratings. When a rating from only two agencies is available, the lower is used. When a rating from only one agency is available, that is used to determine index eligibility.

Securities must have a remaining maturity of at least one year, regardless of optionality. Securities with a coupon that converts from fixed to floating rate must have at least one year until the conversion date.

Principal and coupons must be denominated in U.S. dollars. Coupons must be fixed rate, step-up coupons or coupons that change according to a predetermined schedule.

The securities must be SEC-registered securities, bonds exempt from registration at the time of issuance or Rule 144A securities with registration rights. Public obligations of the U.S. Treasury and inflation-protected securities are eligible for inclusion in the Barclays Capital U.S. Treasury Inflation Protected Securities (TIPS) Index (Series-L). State and local government series bonds, STRIPS, T-bills and bellwethers are excluded from the Barclays Capital U.S. Treasury Inflation Protected Securities (TIPS) Index (Series-L).

Rebalancing

The compositions of the “**returns universe**” is rebalanced at each month-end and represents the fixed set of bonds on which index returns are calculated for the ensuing month. The “**statistics universe**” is a forward-looking version that changes daily to reflect issues dropping out and entering the index, but is not used for return calculation. On the last business day of the month (the “**rebalancing date**”), the composition of the latest statistics universe becomes the returns universe for the following month.

During the month, indicative changes to securities (e.g., credit rating changes, sector reclassification, amount outstanding changes, corporate actions, ticker changes) are reflected in both the statistic universe and returns universe of the index on a daily basis. These changes may cause bonds to enter or fall out of the statistics universe of the index on a daily basis, but will affect the composition of the returns universe only at month-end, when the index is rebalanced.

Intra-month cash flows from interest and principal payments contribute to monthly index returns, but are not reinvested at any short-term reinvestment rate in between rebalance dates to earn an incremental return. However, after

the rebalancing, cash is effectively reinvested into the returns universe for the following month, so that index results over two or more months reflect monthly compounding.

Qualifying securities issued but not necessarily settled on or before the month-end rebalancing date qualify for inclusion in the following month's index if required security reference information and pricing are readily available.

Index Calculation

The Barclays Capital U.S. Treasury Inflation Protected Securities (TIPS) Index (Series-L) is priced by Barclays Capital market makers on a daily basis on 3 p.m. New York time. Bonds in the index are priced on the mid side. The primary price for each security is analyzed and compared with other third-party pricing sources through statistical routines and scrutiny by the research staff. Significant discrepancies are researched and corrected, as necessary.

The amount outstanding reported for TIPS is equal to the notional par value of each TIP security available for purchase by the public as reported by the U.S. Treasury in the Quarterly Treasury Bulletin. This number is then adjusted (divided) by the compounded rate of inflation since the date of issue. The number is updated quarterly, at the end of a month that the Quarterly Treasury Bulletin is released.

When a new TIPS is issued or an existing issue is reopened, the full uninflated par amount outstanding enters the index for returns purposes on the first day of the following month. Only when the next published Quarterly Treasury Bulletin includes the new issuance or reopening will this amount be adjusted to reflect the amount outstanding net of holds by the U.S. Treasury.

BACKGROUND ON THE JPMORGAN CASH INDEX USD 3 MONTH

All information contained in this index supplement regarding the JPMorgan Cash Index USD 3 Month (“**JPM Cash Index**”), including, without limitation, its make-up, method of calculation and changes in its components, from publicly available information and information supplied by J.P. Morgan Securities LLC (“**JPMS**”). This information reflects the policies of, and is subject to change by, JPMS. The JPM Cash Index was developed by JPMS and is calculated, maintained and published by JPMS. JPMS has no obligation to continue to publish, and may discontinue the publication of, the JPM Cash Index.

The JPM Cash Index is reported by Bloomberg L.P. under the ticker symbol “JPCAUS3M.”

The JPM Cash Index measures the total return performance of constant maturity euro-currency deposits from rolling over a euro-currency deposit every business day. The JPM Cash Index is calculated daily for three-month deposits for the United States. The JPM Cash Index has been constructed from December 31, 1985 using daily data. From September 1, 1990 forward, the JPM Cash Index has used quotes for the LIBOR rates for the United States from the British Bankers Association (see Reuters page LIBOR01). To calculate 3-month LIBOR, the BBA collects U.S. Dollar offered rates for deposits in the London interbank market with maturities of 3 months at 11:00 a.m., London time on each London business day from 16 designated banks. The top quartile and bottom quartile market quotes are disregarded and the middle two quartiles are averaged: the resulting “spot fixing” is the BBA 3-month LIBOR rate for that business day.

The returns to euro-currency deposits are highly correlated with the returns to domestic money market instruments because the two markets are well arbitrated. Therefore, the euro-currency indices are representative of the domestic money markets returns.

JPMS only includes deposits with standard maturities because other quotes are typically a linear interpolation between two standard maturity deposits. Therefore, adding deposits with non-standard maturities offers no additional information.

The JPM Cash Index has a relatively constant maturity. The JPM Cash Index assumes JPMS rolls over the corresponding deposit every business day. The maturity or duration of the JPM Cash Index is always equal to the term of the deposit; the actual number of days to maturity can vary due to settlement rules (*e.g.*, a one-month index can vary from 28 to 33 days). The more common approach is to buy, for example, a three-month deposit, hold it for one month, and then roll it over into the new three-month deposit. The maturity of this index would be three months at the beginning of the month and two months at the end. It is more useful to attribute daily cash returns to particular maturities rather than confuse the measurement of returns by varying the maturity.

ANNEX A

[Remainder of page intentionally left blank]

The JPMorgan ETF Efficiente Index Series Index Rules

October 29, 2010, as amended on January 31, 2011

© All Rights Reserved

PART A
THE JPMORGAN ETF EFFICIENTE INDEX SERIES
INDEX RULES

1. Introduction

This document comprises the rules of the JPMorgan ETF Efficiente Index Series, a family of notional rules-based proprietary indices. The rules are divided into Part A (which includes Schedule 1 and applies to every index comprised in the JPMorgan ETF Efficiente Index Series) and Part B.

Table A in Schedule 1 sets out each index in the JPMorgan ETF Efficiente Index Series (each, an “**ETF Efficiente Index**” and together the “**ETF Efficiente Indices**”). The relevant parameters for each ETF Efficiente Index (Target Volatility, Fee, Start Date, Index Level on the Start Date and Weighting Constraints) are provided in the applicable module in Part B for such ETF Efficiente Index.

The Rules may be supplemented, amended or restated from time to time at the discretion of J.P. Morgan Securities Ltd. (“**JPMSL**”) in its capacity as Index Calculation Agent. The Rules will be re-published no later than one calendar month following supplementation or amendment to reflect any such changes. Copies of the current Rules are available from JPMSL upon request.

This document is published by JPMSL of 125 London Wall, London EC2Y 5AJ, UK in its capacity as Index Calculation Agent.

ALL PERSONS READING THIS DOCUMENT SHOULD REFER TO THE RISK FACTORS AND NOTICES, DISCLAIMERS AND CONFLICTS OF INTEREST SECTIONS BELOW AND CONSIDER THE INFORMATION CONTAINED IN THIS DOCUMENT IN LIGHT OF SUCH RISK FACTORS, NOTICES, DISCLAIMERS AND CONFLICTS OF INTEREST.

NOTHING IN THESE RULES CONSTITUTES AN OFFER TO BUY OR SELL ANY SECURITIES, PARTICIPATE IN ANY TRANSACTION OR ADOPT ANY INVESTMENT STRATEGY OR LEGAL, TAX, REGULATORY OR ACCOUNTING ADVICE.

2. General Notes on the ETF Efficiente Indices

Each ETF Efficiente Index is a notional dynamic basket that tracks the excess return of a basket consisting of twelve exchange-traded funds (each, an “**ETF Constituent**”), with dividends reinvested, and the JPMorgan Cash Index 3 Month (the “**Cash Constituent**”), over the return of the Cash Constituent. The ETF Constituents and the Cash Constituent will be referred to together as the Basket Constituents; *provided that* the Basket Constituents are subject to the provisions of Section 10 (*Extraordinary Events*) below. The ETF Constituents represent a diverse range of asset classes and geographic regions. Unless a Market Disruption Event has occurred and is continuing, the weight assigned to each Basket Constituent within an ETF Efficiente Index will be adjusted on a monthly basis on the first Index Business Day of each month (each such day, a “**Re-weighting Date**”) (as described in Section 7 (*ETF Efficiente Index Rebalancing*) below).

The weight assigned to each Basket Constituent on a Re-weighting Date will be determined on the day that is two Index Business Days before the Re-weighting Date (the “**Re-weighting Selection Date**”) by reference to the returns and volatilities of multiple hypothetical portfolios comprising the Basket Constituents measured over the immediately preceding Performance Observation Period.

The re-weighting methodology (as described in more detail below) seeks to identify a weight for each of the Basket Constituents that would have resulted in the hypothetical portfolio with the highest return over the relevant Performance Observation Period, subject to an annualized volatility over the same period equal to or less than a specified volatility (the “**Target Volatility**”). The Target Volatility for each ETF Efficiente Index is specified in the applicable module in Part B.

No assurance can be given that the investment strategy used to construct any ETF Efficiente Index will be successful or that any ETF Efficiente Index will outperform any alternative basket or strategy that might be constructed from the Basket Constituents. Furthermore, no assurance can be given that any ETF Efficiente

Index will achieve its Target Volatility. The actual realized volatility of each ETF Efficient Index may be greater or less than its Target Volatility.

Subject to the occurrence of a Market Disruption Event, the level of each ETF Efficient Index (the “**Index Level**”) will be calculated by the Index Calculation Agent on each Index Business Day to an accuracy of two decimal places. The Index Level is calculated in USD in accordance with the methodology set out in Section 8 (*ETF Efficient Index Level*) below.

Each ETF Efficient Index is described as a notional basket of assets because there is no actual portfolio of assets to which any person is entitled or in which any person has any ownership interest. Each ETF Efficient Index merely references certain assets, the performance of which will be used as a reference point for calculating the Index Level.

3. Index Calculation Agent

JPMSL or any affiliate or subsidiary designated by it will act as calculation agent (the “**Index Calculation Agent**”) for each ETF Efficient Index. The Index Calculation Agent’s determinations in respect of each ETF Efficient Index and interpretation of these Rules are final. Further information is contained in the statement of Responsibility set out in Section 12 (*Responsibility*) below.

4. The Basket Constituents

The notional basket of assets for each ETF Efficient Index (the “**Basket Constituents**” and each a “**Basket Constituent**”) is set out in Table 1 below. Table 1 also contains the Bloomberg ticker for each Basket Constituent for ease of identification, and for each ETF Constituent the Exchange and Related Exchange for such ETF Constituent.

Table 1

<i>i</i>	Basket Constituent Name	Bloomberg Ticker	Primary Exchange for ETF	Related Exchange
1	SPDR S&P 500 ETF Trust	SPY	NYSE Arca	All Exchanges
2	iShares Russell 2000 Index Fund	IWM	NYSE Arca	All Exchanges
3	iShares MSCI EAFE Index Fund	EFA	NYSE Arca	All Exchanges
4	iShares Barclays 20+ Year Treasury Bond Fund	TLT	NYSE Arca	All Exchanges
5	iShares iBOXX Investment Grade Corporate Bond Fund	LQD	NYSE Arca	All Exchanges
6	iShares iBOXX High Yield Corporate Bond Fund	HYG	NYSE Arca	All Exchanges
7	iShares MSCI Emerging Markets Index Fund	EEM	NYSE Arca	All Exchanges

13	JPMorgan Cash Index USD 3 Month	JPCAUS3M	N/A	N/A
----	---------------------------------	----------	-----	-----

5. Initial Composition of the ETF Efficient Indices

On the applicable Start Date for the relevant ETF Efficient Index, such ETF Efficient Index comprised notional holdings in the Basket Constituents with Weights determined as of the Re-weighting Selection Date immediately preceding the Start Date (the “**Initial Re-weighting Selection Date**”), and effected as of the relevant Re-weighting Date (the “**Initial Re-weighting Date**”), which may also be the Start Date, in accordance with Section 6 (*Determining the Weights for the Basket Constituents*). References in these Rules to the “Re-weighting Date” or the “Re-weighting Selection Date”, respectively, shall be deemed to include references to the Initial Re-weighting Date or the Initial Re-weighting Selection Date, respectively.

The composition of each ETF Efficient Index will be adjusted in accordance with the methodology described in the remainder of these Rules.

The Index Level on the Start Date for each ETF Efficient Index is provided in the applicable module for that ETF Efficient Index in Part B. The Index Level for each ETF Efficient Index was USD 100 on October 1, 2010 (the “**Base Date**”).

6. Determining the Weights for the Basket Constituents

On the Initial Re-weighting Selection Date and thereafter on a monthly basis on each subsequent Re-weighting Selection Date, the Index Calculation Agent will determine the weight (the “**Weight**”) to be assigned to each Basket Constituent on the immediately following Re-weighting Date in accordance with the methodology described in this Section 6.

6.1 Identifying the Performance Observation Periods

On each Re-weighting Selection Date k, the Index Calculation Agent will identify the applicable Performance Observation Period k (being the period of 126 Weekdays prior to and including the Re-weighting Selection Date k) (the “**Performance Observation Period**”).

6.2 Identifying the Unique Portfolio for Each Performance Observation Period

With respect to the applicable Performance Observation Period identified by the Index Calculation Agent with respect to a Re-weighting Selection Date k, the Index Calculation Agent will:

- (a) Calculate the Closing TR Level of each ETF Constituent and obtain the Closing Level of each Basket Constituent that is an index, including the Cash Constituent, for each Weekday during the relevant Performance Observation Period. If any such Weekday is not a Dealing Day with respect to a Basket Constituent or if the Index Calculation Agent cannot obtain relevant reliable information from third party sources, the Closing TR Level or Closing Level, as the case may be, for that Basket Constituent in respect of such Weekday shall be deemed to be the Closing TR Level or the Closing Level, as the case may be, for that Basket Constituent as of the immediately preceding Dealing Day for that Basket Constituent for which the Index Calculation Agent can obtain relevant reliable information from third party sources;
- (b) Identify all possible Eligible Portfolios in accordance with Section 6.4 (*Eligible Portfolios*) below.
- (c) Calculate the Performance of each such Eligible Portfolio over the relevant Performance Observation Period in accordance with the following formula:

$$P_k^j = \left(\sum_{i=1}^{13} \frac{S_k^i}{S_{k,0}^i} \times \lambda_j^i \right) - 1$$

where:

P_k^j means the Performance of Eligible Portfolio j on Re-weighting Selection Date k;

S_k^i means (a) the Closing TR Level of Basket Constituent i on Re-weighting Selection Date k if such Basket Constituent is an ETF Constituent or (b) the Closing Level of Basket Constituent i on Re-weighting Selection Date k if such Basket Constituent is an index;

$S_{k,0}^i$ means (a) the Closing TR Level of Basket Constituent i on the first Weekday of Performance Observation Period k if such Basket Constituent is an ETF Constituent or (b) the Closing Level of Basket Constituent i on the first Weekday of Performance Observation Period k if such Basket Constituent is an index;

λ_j^i means the weighting of Basket Constituent i within Eligible Portfolio j.

Closing TR Level means, subject to the provisions of Section 9 (*Market Disruption Events*), with respect to Basket Constituent i if such Basket Constituent is an ETF Constituent and a Dealing Day, t, the Closing Level of the ETF Constituent with dividends re-invested, which will be determined as follows:

$$\text{ClosingTRLevel}_t^i = \text{ClosingTRLevel}_{t-1}^i \times \left(\frac{\text{ClosingLevel}_t^i + d_t^i}{\text{ClosingLevel}_{t-1}^i} \right)$$

where

$\text{ClosingTRLevel}_{t-1}^i$ means the Closing TR Level of ETF Constituent i on the Dealing Day immediately preceding Dealing Day t

ClosingLevel_t^i means the Closing Level of ETF Constituent i on Dealing Day t

$\text{ClosingLevel}_{t-1}^i$ means the Closing Level of ETF Constituent i on the Dealing Day immediately preceding Dealing Day t

d_t^i means

- (a) if Dealing Day t is an Ex Dividend Date for ETF Constituent i, the Gross Dividend Amount of ETF Constituent i in respect of such Ex-Dividend Date; and
- (b) otherwise, 0.

For purposes of determining the Closing TR Level for any ETF Constituent for any Dealing Day, if the immediately preceding Dealing Day ("**Prior Dealing Day**") for such ETF Constituent was a Disrupted Day then, in the formula for determining the Closing TR Level for such Dealing Day, (i) the Closing TR Level for that Prior Dealing Day shall be replaced with the Closing TR Level on the immediately preceding Dealing Day that was not a Disrupted Day (the "**Prior Non-Disrupted Dealing Day**") for such ETF Constituent, (ii) the Closing Level for that Prior Dealing Day shall be replaced with the Closing Level on the Prior Non-Disrupted Dealing Day for such ETF Constituent, and (iii) the Gross Dividend Amount of the ETF Constituent in respect of such Dealing Day shall be replaced with the sum of the Gross Dividend Amounts of the ETF Constituent in respect of all days from and excluding the Prior Non-Disrupted Dealing Day to and including such Dealing Day.

- (d) Calculate the Realized Volatility of each such Eligible Portfolio over Performance Observation Period k in accordance with the following formula:

$$\sigma_k^j = \sqrt{\frac{L \times \sum_{n=1}^L (R_{k,n}^j)^2 - \left(\sum_{n=1}^L (R_{k,n}^j) \right)^2}{L^2}} \times 260$$

where:

σ_k^j means the Realized Volatility of Eligible Portfolio j on Re-weighting Selection Date k;

L means 125, the number of Weekday returns during Performance Observation Period k;

$R_{k,n}^j$ means the weighted sum of the natural logarithms of daily returns of each Basket Constituent from Weekday n-1 to Weekday n in Performance Observation Period k, calculated in accordance with the following formula:

$$R_{k,n}^j = \sum_{i=1}^{13} \lambda_j^i \times \ln \left(\frac{S_{k,n}^i}{S_{k,n-1}^i} \right)$$

where:

$S_{k,n}^i$ means (a) the Closing TR Level of Basket Constituent i on Weekday n in Performance Period k if such Basket Constituent is an ETF Constituent or (b) the Closing Level of Basket Constituent i on Weekday n in Performance Observation Period k if such Basket Constituent is an index;

$S_{k,n-1}^i$ means (a) the Closing TR Level of Basket Constituent i on Weekday n-1 in Performance Period k if such Basket Constituent is an ETF Constituent or (b) the Closing Level of Basket Constituent i on Weekday n-1 in Performance Observation Period k if such Basket Constituent is an index;

λ_j^i means the weighting of Basket Constituent i within Eligible Portfolio j.

- (e) Select the Eligible Portfolio with the strongest performance over the relevant Performance Observation Period (with a precision of as many decimal places as necessary) that has an annualized Realized Volatility equal to or less than the Target Volatility. The Eligible Portfolio that satisfies these criteria is known as the “**Unique Portfolio**” for that Performance Observation Period.
- (f) If none of the Eligible Portfolios has an annualized Realized Volatility of equal to or less than the Target Volatility, the Index Calculation Agent shall increase the Target Volatility by one per cent. (1%) and repeat step 6.2(e) above until a Unique Portfolio is selected. These steps, including an increase to the Target Volatility, may be repeated further until a Unique Portfolio is selected.

6.3 *Determining the Weight to be assigned to each Basket Constituent on the relevant Re-weighting Date*

The Weight to be assigned to each Basket Constituent as of any Re-weighting Date will be determined by the Index Calculation Agent as the weight assigned to such Basket Constituent within the Unique Portfolio identified with respect to the immediately preceding Re-weighting Selection Date in accordance with Section 6.2 above.

The effective Weight of each of the Basket Constituents within each ETF Efficient Index may fluctuate during the period from one Re-weighting Date to the next Re-weighting Date due to movements in the level of the Basket Constituents.

6.4 *Eligible Portfolios & Weighting Constraints*

For each ETF Efficient Index, an “**Eligible Portfolio**” is any hypothetical portfolio of Basket Constituents that comprises all thirteen (13) of the Basket Constituents and that satisfies the “**Weighting Constraints**” detailed in the applicable module in Part B for such ETF Efficient Index.

7. **ETF Efficient Index Rebalancing**

Unless a Market Disruption Event has occurred and is continuing, the relevant ETF Efficient Index will be rebalanced on the first Index Business Day of each calendar month.

8. ETF Efficient Index Level

Unless a Market Disruption Event has occurred and is continuing, the Index Level of each ETF Efficient Index will be calculated by the Index Calculation Agent for each Index Business Day in accordance with the following algorithm:

On the Base Date the Index Level was 100 for each ETF Efficient Index. On each Index Business Day t from but excluding Re-weighting Date k to and including the next following Re-weighting Date k+1, the level of the ETF Efficient Index will be calculated according to the following formula:

$$\text{Index}_{k,t} = \text{Index}_k \times \left(\text{Return}_{k,t} - \text{Fee} \times \frac{\text{Days}_{k,t}}{360} \right)$$

where:

$\text{Index}_{k,t}$ means the Index Level of the applicable ETF Efficient Index on Index Business Day t;

Index_k means the Index Level of the applicable ETF Efficient Index on Re-weighting Date k;

Fee means the Fee specified in the applicable module in Part B for the applicable ETF Efficient Index.

$\text{Days}_{k,t}$ means the number of calendar days from but excluding Re-weighting Date k to and including Index Business Day t

$$\text{Return}_{k,t} = \left(\sum_{i=1}^{13} \frac{S_{k,t}^i}{S_k^i} \times W_k^i \right) - \frac{S_{k,t}^{13}}{S_k^{13}} + 100\%$$

where:

$S_{k,t}^i$ means, for i=1 through 12, the Closing TR Level of Basket Constituent i if such Basket Constituent is an ETF Constituent, or the Closing Level for Basket Constituent i if such Basket Constituent is an index that is not the Cash Constituent, on Index Business Day t;

S_k^i means, for i=1 through 12, the Closing TR Level of Basket Constituent i if such Basket Constituent is an ETF Constituent, or the Closing Level for Basket Constituent i if such Basket Constituent is an index that is not the Cash Constituent, on Re-weighting Date k;

W_k^i means the Weight assigned to Basket Constituent i on Re-weighting Date k (for all Basket Constituents);

$S_{k,t}^{13}$ means the Closing Level of Basket Constituent i=13 (the Cash Constituent) on Index Business Day t;

S_k^{13} means the Closing Level of Basket Constituent i=13 (the Cash Constituent) on Re-weighting Date k; where i for each Basket Constituent is the number (1 through 13) assigned to that Basket Constituent in Table 1 in Section 4 (*The Basket Constituents*) (above).

9. Market Disruption

9.1 On a Re-weighting Selection Date

If a Re-weighting Selection Date is a Disrupted Day in respect of any Basket Constituent (each such Basket Constituent for these purposes, an “**Affected Basket Constituent**”), then the relevant Re-weighting Selection Date shall remain the originally scheduled Re-weighting Selection Date and the Closing TR Level or Closing Level, as the case may be, for each Affected Basket Constituent in respect of such Disrupted Day shall be deemed to be the Closing TR Level or Closing Level, as the case may be, for the Affected Basket Constituent as of the immediately preceding Dealing Day for the Affected Basket Constituent that was not a Disrupted Day.

9.2 On a Re-weighting Date

If a Re-weighting Date is a Disrupted Day in respect of any Basket Constituent (each such Basket Constituent for these purposes, an “**Affected Basket Constituent**”), then the relevant Re-weighting Date shall be deemed to be the

first following day that is a Dealing Day for all of the Basket Constituents and that is not a Disrupted Day for any Basket Constituent, unless each of the five Index Business Days immediately following the day originally scheduled to be the Re-weighting Date is a Disrupted Day for any Basket Constituent, in which case such fifth Index Business Day following the day originally scheduled to be the relevant Re-weighting Date shall be deemed to be the relevant Re-weighting Date (notwithstanding that it is a Disrupted Day in respect of at least one Basket Constituent), and the Index Calculation Agent shall re-weight the relevant ETF Efficient Index acting in good faith using such information and/or methods as it determines, in its reasonable discretion, are appropriate.

9.3 *On an Index Business Day*

If any Index Business Day is a Disrupted Day for one or more Basket Constituents (each such Basket Constituent for these purposes, an “**Affected Basket Constituent**”), the Index Calculation Agent may either:

- (a) calculate its good faith estimate of the Index Level for such Index Business Day, using its good faith estimate of the Closing Level and/or Closing TR Level of the Affected Basket Constituent(s). Any such estimated level may be subject to correction on the first succeeding Index Business Day that is not a Disrupted Day in respect of such Affected Basket Constituent and on the first succeeding Index Business Day that is not a Disrupted Day in respect of any Basket Constituent; or
- (b) suspend the calculation and publication of the Index Level until the first succeeding Index Business Day that is not a Disrupted Day in respect of any Basket Constituent.

For purposes of determining the Closing TR Level for any ETF Constituent for any Dealing Day, if the Prior Dealing Day for such ETF Constituent was a Disrupted Day then, in the formula for determining the Closing TR Level for such Dealing Day, (i) the Closing TR Level for that Prior Dealing Day shall be replaced with the Closing TR Level on the Prior Non-Disrupted Dealing Day for such ETF Constituent, (ii) the Closing Level for that Prior Dealing Day shall be replaced with the Closing Level on the Prior Non-Disrupted Dealing Day for such ETF Constituent, and (iii) the Gross Dividend Amount of the ETF Constituent in respect of such Dealing Day shall be replaced with the sum of the Gross Dividend Amount of the ETF Constituent in respect of all days from and excluding the Prior Non-Disrupted Dealing Day to and including such Dealing Day.

9.4 *Definitions Related to Market Disruption*

(a) “**Disrupted Day**” means in respect of a Basket Constituent, a Dealing Day on which a Market Disruption Event occurs or is continuing in respect of such Basket Constituent.

(b) A “**Market Disruption Event**” occurs if the Index Calculation Agent in its sole discretion determines that on any Dealing Day there has been:

(i) in respect of any Basket Constituent that is an index or any Reference Index of any ETF Constituent, a failure by the relevant sponsor to calculate and publish the Closing Level for such index on such Dealing Day, or any event that, in the determination of the Index Calculation Agent, disrupts or impairs the ability of market participants generally to effect transactions in or obtain market values for any securities or components that compose the relevant index, any options on instruments related to such securities or components, or relevant futures related to such securities or components, if such disruption or impairment relates to securities or components and related options or futures on the same or additional securities or components which securities and components in the aggregate compose 20 percent or more of the level of the relevant index; or

(ii) in respect of a Basket Constituent that is an equity index or any Reference Index of any ETF Constituent that is an equity index, an Equity Index Disruption Event; or

(iii) in respect of a Basket Constituent that is a commodity index, any Reference Index of any ETF Constituent that is a commodity index or any Reference Commodities of any ETF Constituent, a Commodity Disruption Event; or

(iv) in respect of an ETF Constituent, an ETF Disruption Event; and

the Index Calculation Agent determines in its sole discretion that the applicable event described above could materially interfere with the ability of market participants to transact in positions with respect to the relevant ETF Efficient Index, any Basket Constituent or the Reference Index of any ETF Constituent.

For the purpose of determining whether a Market Disruption Event with respect to an index and a Dealing Day exists at any time, if trading in a security or component included in the applicable index is materially suspended or materially limited at that time, then the relevant percentage contribution of that security to the level of the applicable index will be based on a comparison of (x) the portion of the level of the applicable index attributable to that security relative to (y) the overall level of the applicable index, in each case immediately before that suspension or limitation.

(c) “**Equity Index Disruption Event**” means, in each case as determined by the Index Calculation Agent in its sole discretion, subject to the provisions of Section 9.4(g):

- (i) the occurrence or existence of a suspension, absence or material limitation of trading of securities then constituting 20% or more of the level of the equity index on the relevant primary exchanges for such securities for more than two hours of trading during, or during the last one-half hour period preceding the close of, the principal trading session on such relevant primary exchanges; or
- (ii) if applicable, the occurrence or existence of a suspension, absence or material limitation of trading on the primary exchange or market for trading in futures or options contracts related to the equity index for more than two hours of trading during, or during the last one-half hour period preceding the close of, the principal trading session on such applicable exchange or market.

(d) “**Commodity Disruption Event**” means, in each case as determined by the Index Calculation Agent in its sole discretion:

- (i) A material limitation, suspension, discontinuation or disruption of trading in one or more of the relevant Reference Commodities;
- (ii) A material limitation, suspension, discontinuation or disruption of trading in one or more options or futures contracts on (x) a relevant commodity or commodities related to the relevant commodity index or (y) the relevant Reference Commodities, which results in failure by the relevant exchange on which any such option(s) and/or futures contract(s) is/are traded to report an official settlement price for such option(s) and/or futures contract(s) on the day on which such event occurs or any succeeding day on which it continues;
- (iii) a limitation, suspension or disruption of trading in one or more options or futures contracts on (x) a relevant commodity or commodities related to the relevant commodity index or (y) the relevant Reference Commodities, by reason of movements exceeding “limit up” or “limit down” levels permitted by the relevant exchange and which the Index Calculation Agent determines is material to trading volume and market conditions in such option(s) or futures contract(s) on such Dealing Day;
- (iv) publication by the relevant exchange of a “limit price” as the official settlement price for any futures contract on (x) the relevant commodity or commodities related to the relevant commodity index or (y) the relevant Reference Commodities (by reason of movements exceeding “limit up” or “limit down” levels permitted by the relevant exchange);
- (v) the occurrence of a Non-Publication Event;
- (vi) the relevant exchange for any futures contracts on (x) the relevant commodity or commodities related to the relevant commodity index or (y) the relevant Reference Commodities is not open for trading during its regular trading session as scheduled for the relevant day; or
- (vii) the relevant market for any Reference Commodity is not open for trading during its regular trading session as scheduled for the relevant day.

(e) “**Non-Publication Event**” means, the failure by the relevant exchange, index sponsor of the relevant commodity index or other price source to announce publicly or publish the following (or the information necessary for determining the following): (a) the official settlement price for any relevant futures contract on (x) the relevant commodity or commodities related to the relevant commodity index or (y) the relevant Reference Commodities; or (b) the closing level of the relevant commodity index, in either case by noon (London time) on the immediately following Dealing Day, provided, however that the occurrence of such an event shall not constitute a “Non-Publication Event” in the case of clause (b) hereof if the Index Calculation Agent determines in its sole discretion by noon (London time) on such immediately following Dealing Day that the information necessary for determining the closing level of the relevant commodity index has been announced publicly or published by the relevant exchange, index sponsor of the relevant commodity index or other price source in which case the Index Calculation Agent shall determine the closing level of such commodity index (the closing level so determined being a “**Proxy Calculated Level**”) in good faith and in a commercially reasonable manner.

- (f) “**ETF Disruption Event**” means, in each case as determined by the Index Calculation Agent in its sole discretion, subject to the provisions of Section 9.4(g):
- (i) the occurrence or existence of a suspension, absence or material limitation of trading of the shares of such ETF Constituent on the relevant primary exchange for such shares for more than two hours of trading during, or during the last one-half hour period preceding the close of, the principal trading session on such relevant primary exchange;
 - (ii) a breakdown or failure in the price and trade reporting systems of the relevant primary exchange for the shares of such ETF Constituent as a result of which the reported trading prices for such shares are materially inaccurate for more than two hours of trading during, or during the last one-half hour period preceding the close of, the principal trading session on such relevant primary exchange;
 - (iii) if applicable, the occurrence or existence of a suspension, absence or material limitation of trading on the primary exchange or market for trading in futures or options contracts related to the shares of such ETF Constituent or on any Related Exchange for such ETF Constituent for more than two hours of trading during, or during the last one-half hour period preceding the close of, the principal trading session in the applicable exchange or market;
 - (iv) the net asset value of such ETF Constituent is not calculated or is not announced by the Basket Constituent Sponsor; or
 - (v) the relevant sponsor of any ETF Constituent suspends creations or redemptions of shares of such ETF Constituent.
- (g) For the purpose of determining whether an Equity Index Disruption Event or an ETF Disruption Event has occurred:
- (1) a limitation on the hours or number of days of trading will not constitute an Equity Index Disruption Event or an ETF Disruption Event if it results from an announced change in the regular business hours of the relevant primary exchange or the primary exchange or market for trading in futures or options contracts related to the relevant shares;
 - (2) limitations pursuant to the rules of any relevant primary exchange similar to New York Stock Exchange Rule 80B (or any applicable rule or regulation enacted or promulgated by any other self-regulatory organization or any government agency of scope similar to New York Stock Exchange Rule 80B as determined by the Index Calculation Agent) on trading during significant market fluctuations will constitute a suspension, absence or material limitation of trading;
 - (3) a suspension of trading in futures or options contracts on the applicable equity index or shares of an ETF Constituent by the primary exchange or market for trading in such contracts or shares by reason of (a) a price change exceeding limits set by such exchange or market, (b) an imbalance of orders relating to such contracts or shares or (c) a disparity in bid and ask quotes relating to such contracts or shares, will constitute a suspension, absence or material limitation of trading in futures or options contracts related to the applicable equity index or the shares of such ETF Constituent; and
 - (4) a suspension, absence or material limitation of trading on any relevant primary exchange or, if applicable, on the primary exchange or market on which futures or options contracts related to the applicable equity index or the shares of such ETF Constituent are traded will not include any time when such exchange or market is itself closed for trading under ordinary circumstances.

10. Extraordinary Events

10.1 *Extraordinary Events for each Basket Constituent*

- (i) For any Basket Constituent, (a) if its level or net asset value is not calculated and is not announced by the Basket Constituent Sponsor for the relevant Basket Constituent, but is calculated and announced by a successor sponsor acceptable to the Index Calculation Agent, or (b) in the case of an index, if it is replaced by a successor index using, in the determination of the Index Calculation Agent, the same or a

substantially similar formula for and method of calculation as used in the calculation of that Basket Constituent, or (c) in the case of an ETF Constituent, if it is replaced by a successor ETF whose Reference Commodities are the same as that of the replaced ETF Constituent or whose Reference Index is either the same as that of the replaced ETF Constituent or is an index using, in the determination of the Index Calculation Agent, the same or a substantially similar formula for and method of calculation as used in the calculation of the replaced ETF Constituent's Reference Index and, in any case, whose sponsor is acceptable to the Index Calculation Agent, then in the case of clause (a), (b) or (c) above that Basket Constituent will thereafter be deemed to be the successor index or ETF so calculated and announced by that successor sponsor described in clause (a) above or that successor index or ETF described in clause (b) or (c) above, as the case may be, with effect from a date determined by the Index Calculation Agent who may make such adjustments to the Rules of the relevant ETF Efficient Index as it determines in good faith are appropriate to account for such change. For the avoidance of doubt, the Index Calculation Agent shall not accept a particular successor ETF or successor index if the Index Calculation Agent determines, in its discretion, that doing so would immediately result in the occurrence of an Extraordinary Event. Upon the acceptance of a successor ETF or successor index, such successor shall take the place of the relevant Basket Constituent. For the avoidance of doubt, the prior performance of such successor shall be used in the identification of the Unique Portfolio for future Performance Observation Periods.

- (ii) If an Extraordinary Event occurs in respect of a Basket Constituent, the Index Calculation Agent, acting in good faith and a commercially reasonable manner, shall select as a substitute for such Basket Constituent an exchange-traded fund or index that the Index Calculation Agent determines, in its discretion, possesses substantially similar characteristics or provides a substantially similar exposure (as considered prior to the occurrence of such Extraordinary Event, with the understanding that an exchange-traded fund can be substantially similar to an index and vice versa) as compared to the Basket Constituent that is being replaced (such substitute ETF or index being referred to herein as a "substitute ETF" or "substitute index", respectively); in such a case, the Index Calculation Agent shall, in good faith, make such adjustment(s) that it determines to be appropriate to any variable, calculation methodology, valuation terms or any other rule in relation to the relevant ETF Efficient Index to account for such substitution; *provided that* the Index Calculation Agent shall not select a substitute ETF for the Cash Constituent, but may select a substitute index for the Cash Constituent; *provided further that* for any Basket Constituent other than the Cash Constituent if the Index Calculation Agent determines, in its discretion, that no such substitute ETF and no such substitute index is available, then the Index Calculation Agent will, in its discretion, (x) determine its good faith estimate of the closing price of such Basket Constituent as of a date on or prior to the occurrence of such Extraordinary Event and use such estimate of the closing price (without modification over time) in respect of such Basket Constituent in subsequent calculations of the Index Level of the relevant ETF Efficient Index until the immediately following Re-Weighting Date, (y) replace such Basket Constituent with the Cash Constituent as its substitute and (z) in good faith, make such adjustment(s) that it determines to be appropriate to any variable, calculation methodology, valuation terms or any other rule in relation to the relevant ETF Efficient Index to account for such substitution (for the avoidance of doubt, as a result of such a replacement of any Basket Constituent with the Cash Constituent, the aggregate Weight of the Cash Constituent would be allowed to exceed the Weighting Constraints specific to the Cash Constituent, because a portion of such aggregate Weight would be subject to the Weighting Constraints specific to the replaced Basket Constituent and not the Weighting Constraints specific to the Cash Constituent); *provided further that* for the Cash Constituent if the Index Calculation Agent determines, in its discretion, that no such substitute ETF and no such substitute index is available, then the Index Calculation Agent will, in its discretion, calculate the level of the Cash Constituent using, in lieu of a published level for the Cash Constituent the level for the Cash Constituent as of any future Index Business Day as determined by the Index Calculation Agent in accordance with the formula for and method of calculating that Cash Constituent last in effect prior to the occurrence of such Extraordinary Event, but using only the types of components that comprised that Cash Constituent immediately prior to such Extraordinary Event (and in the case of components with an expiration or maturity, any components required to roll any expiring positions in accordance with the formula for and method of calculating that Cash Constituent shall be permitted). For the avoidance of doubt, the Index Calculation Agent shall not select a particular substitute ETF or substitute index if the Index Calculation Agent determines, in its discretion, that doing so would immediately result in the occurrence of an Extraordinary Event. Upon the selection of a substitute ETF or substitute index, such substitute shall take the place of the relevant Basket Constituent. For the avoidance of doubt, the prior performance of such substitute shall be used in the identification of the Unique Portfolio for future Performance Observation Periods.

“**Extraordinary Event**” in respect of a Basket Constituent means:

- (1) for any Basket Constituent that is an index (including, for the avoidance of doubt, the Cash Constituent), the Basket Constituent Sponsor makes a material change in the formula for or the method of calculating that index or in any other way materially modifies that index (other than a modification prescribed in that formula or method to maintain that index in routine circumstances);
- (2) for any Basket Constituent that is an ETF Constituent, the sponsor of the relevant Reference Index of the ETF makes a material change in the formula for or the method of calculating that Reference Index of the ETF or in any other way materially modifies that Reference Index of the ETF (other than a modification prescribed in that formula or method to maintain that Reference Index of the ETF in routine circumstances);
- (3) for any Basket Constituent that is an ETF Constituent, the Basket Constituent Sponsor replaces the Reference Commodities or replaces the Reference Index of the ETF with a successor index that does not, in the determination of the Index Calculation Agent, use the same or a substantially similar formula for and method of calculation as used in the calculation of the replaced Reference Index of the ETF;
- (4) for any Basket Constituent, the Basket Constituent Sponsor permanently cancels the Basket Constituent, and no successor exists, or the Basket Constituent’s level or net asset value is not calculated and is not announced by the Basket Constituent Sponsor for the relevant Basket Constituent, and is not calculated and announced by a successor sponsor acceptable to the Index Calculation Agent;
- (5) in respect of any Basket Constituent that is an index, a failure by the relevant sponsor to calculate and publish the Closing Level for such index for 5 consecutive Dealing Days;
- (6) an ETF Constituent is de-listed from the relevant Exchange for such ETF Constituent, liquidated, or otherwise terminated;
- (7) a Lock-In Event occurs in respect of an ETF Constituent;
- (8) in respect of a Basket Constituent, at any time, the licence granted (if required) by a non-affiliate of the Index Calculation Agent to the Index Calculation Agent (or its affiliates) to use such Basket Constituent for the purposes of the relevant ETF Efficient Index terminates, or the Index Calculation Agent’s rights to use the Basket Constituent for the purpose of the relevant ETF Efficient Index is otherwise disputed by a non-affiliate of the Index Calculation Agent, impaired or ceases (for any reason); or
- (9) the occurrence (and/or continuation) of a Change in Law.

A “**Lock-In Event**” occurs when one or more of the following events occur, and the Index Calculation Agent determines in its sole discretion that such event or combination of events is material (although, for the avoidance of doubt, the Index Calculation Agent has no obligation to monitor actively whether or not any of the following events has occurred):

- (a) There is an amendment, variation or modification to the offering documents of any ETF Constituent, that, in the reasonable determination of the Index Calculation Agent, would materially adversely affect the ability of market participants to trade in shares of the ETF Constituent;
- (b) The Average Daily Trading Volume of any ETF Constituent other than those specified in clause (c) of this definition of Lock-In Event declines below \$50 million;
- (c) The Average Daily Trading Volume of any ETF Constituent numbered 8 (EMB) or 10 (GSG) in Table 1 (in Section 4 (*The Basket Constituents*)) or any successor to or substitute for any of those ETF Constituents declines below \$7.5 million;
- (d) The Market Capitalization of any ETF Constituent declines below \$500 million;
- (e) The net asset value of any ETF Constituent is not calculated or is not announced by the relevant Basket Constituent Sponsor for 5 consecutive Dealing Days for such ETF Constituent;
- (f) The relevant sponsor of the Reference Index of any ETF Constituent fails to calculate and publish the Closing Level for such index for 5 consecutive Dealing Days; or
- (g) The relevant sponsor of any ETF Constituent suspends creations or redemptions of shares of such ETF Constituent for 5 consecutive Dealing Days or announces a suspension of unlimited duration of such creations or redemptions.

A “**Change in Law**” occurs when, due to either:

(a) the adoption of, or any change in, any applicable law, regulation or rule (including, without limitation, any tax law); or

(b) the promulgation of, or any change in, the interpretation by any court, tribunal or regulatory authority with competent jurisdiction of any applicable law, rule, regulation or order (including, without limitation, as implemented by the U.S. Commodity Futures Trading Commission or any exchange or trading facility),

the Index Calculation Agent determines in good faith that (x) it is contrary to such law, rule, regulation or order for any market participants that are brokers or financial intermediaries (individually or collectively) to hold, acquire or dispose of (in whole or in part) any Basket Constituent, any transaction referencing any Basket Constituent or any component of any Basket Constituent or of any Reference Index of any ETF Constituent or, (y) holding a position in any Basket Constituent, any transaction referencing any Basket Constituent or any component of any Basket Constituent or of any Reference Index of any ETF Constituent is (or, but for the consequent disposal or termination thereof, would otherwise be) in excess of any allowable position limit(s) applicable to any market participants that are brokers or financial intermediaries (individually or collectively) under any such law, rule or regulation in relation to such Basket Constituent, transaction referencing the Basket Constituent or component of the Basket Constituent or of the Reference Index of the ETF Constituent, including in any case traded on any exchange(s) or other trading facility (including, without limitation, any relevant exchange).

10.2 *Anti-Dilution Adjustments*

With respect to each ETF Constituent (or the relevant successor or substitute ETF), the Index Calculation Agent will make anti-dilution adjustments to the Closing Level of such ETF Constituent only (a) if the shares of an ETF Constituent are subject to a share split or reverse share split, once such split has become effective, and (b) if an ETF Constituent is subject to (i) an issuance of additional shares of such ETF Constituent that is given ratably to all or substantially all holders of shares of such ETF Constituent or (ii) a distribution of shares of such ETF Constituent as a result of the triggering of any provision of the corporate charter of such ETF Constituent, once the dividend or distribution has become effective and the shares of such ETF Constituent are trading ex-dividend. The Index Calculation Agent will be solely responsible for the determination and calculation of any such anti-dilution adjustments and any related determinations and calculations, and its determinations and calculations with respect thereto will be conclusive in the absence of manifest error.

11. **Corrections**

If (i) the Closing Level of any Basket Constituent as of any date which is published or otherwise made available in respect of the relevant Basket Constituent is subsequently corrected and such correction is published or otherwise made available in respect of such Basket Constituent; or (ii) the Index Calculation Agent identifies an error or omission in any of its calculations or determinations in respect of an ETF Efficient Index, then the Index Calculation Agent may, if practicable and if the Index Calculation Agent determines acting in good faith that such correction, error or omission (as the case may be) is material, adjust or correct the relevant calculation or determination and/or the Index Level as of any Index Business Day to take into account such correction.

Comment [U1]: Deleted because was a duplicate

12. **Responsibility**

The Index Calculation Agent shall act in good faith and in a commercially reasonable manner with respect to the performance of its obligations and the exercise of its discretion pursuant to these Rules.

Although these Rules are intended to be comprehensive, ambiguities may arise. In such circumstances, the Index Calculation Agent will resolve such ambiguities in a reasonable manner and, if necessary, amend these Rules to reflect such resolution.

Neither the Index Calculation Agent nor any of its affiliates or subsidiaries or any of their respective directors, officers, employees, representatives, delegates or agents (each a "**Relevant Person**") shall have any responsibility to any person (whether as a result of negligence or otherwise) for any determinations made or anything done (or omitted to be determined or done) in respect of any ETF Efficient Index or any use to which any person may put any ETF Efficient Index or their Index Levels. All determinations of the Index Calculation Agent in respect of

each ETF Efficient Index shall be final, conclusive and binding and no person shall be entitled to make any claim against any of the Relevant Persons in respect thereof. Once a determination or calculation is made or action taken by the Index Calculation Agent in respect of an ETF Efficient Index, neither the Index Calculation Agent nor any other Relevant Person shall be under any obligation to revise any determination or calculation made or action taken for any reason.

Definitions

Terms not otherwise defined herein, shall have the following meanings:

“Affected Basket Constituent”	has the meaning given to such term in Sections 9.1, 9.2 and 9.3.
“Average Daily Trading Volume”	means, with respect to an ETF Constituent and an Index Business Day, the product of (a) the average volume of trading in the shares of such ETF Constituent on all exchanges over the preceding 6 month period, as reported by Bloomberg using the function ETF Ticker US HP and selecting a 6 month range or another information provider selected by the Index Calculation Agent, and (b) the Closing Level of such ETF Constituent on such Index Business Day. The Average Daily Trading Volume for each ETF Constituent on October 28, 2010 is provided in Schedule 2 to this Part A.
“Base Date”	means October 1, 2010, as specified in Section 5 (<i>Initial Composition of the ETF Efficient Indices</i>).
“Basket Constituent”	has the meaning given to such term in Section 4 (<i>The Basket Constituents</i>), subject to the provisions of Section 10 (<i>Extraordinary Events</i>).
“Basket Constituent Sponsor”	means, in respect of a Basket Constituent, the sponsor or successor sponsor of such Basket Constituent.
“Business Day”	a day (other than a Saturday or a Sunday) on which commercial banks are open for business (including dealings in foreign exchange and foreign currency deposits) in New York, New York.
“Cash Constituent”	means the JPMorgan Cash Index 3 Month or any successor or substitute determined pursuant to Section 10 (<i>Extraordinary Events</i>)
“Cash Constituent Sponsor”	means the sponsor or successor sponsor of the Cash Constituent
“Change in Law”	has the meaning given to such term in Section 10 (<i>Extraordinary Events</i>).
“Closing Level”	means, subject to the provisions of Section 9 (<i>Market Disruption</i>) and Section 10 (<i>Extraordinary Events</i>), (a) in respect of a Basket Constituent that is an index, including the Cash Constituent, and a Dealing Day, (i) the official closing level of the applicable Basket Constituent published by the Basket Constituent Sponsor for such Dealing Day; <i>provided, however</i> that if the Index Calculation Agent determines that such official closing level reflects manifest error on the part of the relevant Basket Constituent Sponsor, the Index Calculation Agent shall determine the closing level of the index in good faith and in a commercially reasonable manner or (ii) in such circumstances as set out in the definition of Non-Publication Event relating to the calculation of a Proxy Calculated Level, the Proxy Calculated Level, and (b) in respect of an ETF Constituent, and a Dealing Day, the last reported sale price, regular way (or, in the case of The NASDAQ Stock Market, the official closing price) of the principal trading session on such Dealing Day on the principal U.S. securities exchange registered under the Securities Exchange Act of 1934, as amended (the “ Exchange Act ”), on which such ETF Constituent is listed or admitted to trading.
“Closing TR Level”	means, in respect of an ETF Constituent and a Dealing Day, as defined in Section 6.2 (<i>Identifying the Unique Portfolio for Each Performance Observation Period</i>).

“Commodity Disruption Event”	has the meaning given to such term in Section 9.4 (<i>Definitions Related to Market Disruption</i>).
“Dealing Day”	means, (a) in respect of any Basket Constituent that is an index, including the Cash Constituent, a day upon which the Closing Level for the Cash Constituent is (or, but for the occurrence of a Market Disruption Event, would have been) scheduled to be calculated and published by the relevant Basket Constituent Sponsor; and (b) in respect of an ETF Constituent, each day on which the primary exchange in the United States for such ETF Constituent is scheduled to be open for trading for its regular trading session.
“Disrupted Day”	has the meaning given to such term in Section 9.4 (<i>Definitions Related to Market Disruption</i>).
“ETF Constituent”	means a Basket Constituent that is an exchange-traded fund
“ETF Disruption Event”	has the meaning given to such term in Section 9.4 (<i>Definitions Related to Market Disruption</i>).
“ETF Efficient Index”	means each index comprised in the JPMorgan ETF Efficient Index Series
“Eligible Portfolio”	has the meaning given to such term in Section 6.4 (<i>Eligible Portfolios & Weighting Constraints</i>)
“Equity Index Disruption Event”	has the meaning given to such term in Section 9.4 (<i>Definitions Related to Market Disruption</i>).
“Ex-Dividend Date”	means, with respect to a dividend or other distribution for an ETF Constituent, the first trading day on which transactions in the shares of such ETF Constituent trade on the relevant exchange without the right to receive that dividend or other distribution.
“Extraordinary Event”	has the meaning given to such term in Section 10 (<i>Extraordinary Events</i>).
“Fee”	means the Fee specified in the applicable module in Part B for the applicable ETF Efficient Index.
“Gross Dividend Amount”	means, in respect of an ETF Constituent and an Ex-Dividend Date for such ETF Constituent, 100% of the amount of any dividend or other distribution per share of the ETF Constituent that a shareholder in that ETF Constituent on that Ex-Dividend Date would no longer have the right to receive due to the occurrence of such Ex-Dividend Date, as determined by the Index Calculation Agent in its discretion on as (x) the amount of any cash dividend paid or other cash distribution made and (y) the fair market value of any distribution of shares of capital stock, evidences of indebtedness or other assets or property of such ETF Constituent (other than share dividends or distributions referred to in Section 10.2(b) (<i>Anti-Dilution Adjustments: Share Dividends or Distributions</i>)). If a portion of such distribution consists of property traded on the Ex-Dividend Date on a U.S. national securities exchange, the fair market value of such portion will equal the closing price of such distributed property on such Ex-Dividend Date.

“Index Business Day”	means a day (i) on which the New York Stock Exchange is scheduled to open for trading for its regular trading session and (ii) that is a Dealing Day for all Basket Constituents.
“Index Calculation Agent”	has the meaning given to such term in Section 3 (<i>Index Calculation Agent</i>).
“Index Level”	has the meaning given to such term in Section 2 (<i>General Notes on the ETF Efficiente Indices</i>).
“Initial Re-Weighting Date”	has the meaning given to such term in Section 5 (<i>Initial Composition of the ETF Efficiente Indices</i>).
“Initial Re-Weighting Selection Date”	has the meaning given to such term in Section 5 (<i>Initial Composition of the ETF Efficiente Indices</i>).
“JPMSL”	means J.P. Morgan Securities Ltd.
“Lock-In Event”	has the meaning given to such term in Section 10 (<i>Extraordinary Events</i>).
“Market Capitalization”	means, with respect to an ETF Constituent and an Index Business Day, the market capitalization of the ETF Constituent as provided by Bloomberg on the “DES” page or by another information provider selected by the Index Calculation Agent for such ETF Constituent on such Index Business Day. The Market Capitalization for each ETF Constituent on October 28, 2010 is provided in Schedule 2 to this Part A.
“Market Disruption Event”	has the meaning given to such term in Section 9.4 (<i>Definitions Related to Market Disruption</i>).
“Non-Publication Event”	has the meaning given to such term in Section 9.4 (<i>Definitions Related to Market Disruption</i>).
“Performance”	means, in respect of an Eligible Portfolio and a Performance Observation Period, the performance of such Eligible Portfolio over such Performance Observation Period, as determined by the Index Calculation Agent using the algorithm(s) set out in Section 6
“Performance Observation Period”	has the meaning given to such term in Section 6.1 (<i>Identifying the Performance Observation Periods</i>).
“Prior Dealing Day”	has the meaning given to such term in Section 6.2 (<i>Identifying the Unique Portfolio for each Performance Observation Period</i>).
“Prior Non-Disrupted Dealing Day”	has the meaning given to such term in Section 6.2 (<i>Identifying the Unique Portfolio for each Performance Observation Period</i>).
“Proxy Calculated Level”	has the meaning given to such term in Section 9.4 (<i>Definitions Related to Market Disruption</i>).
“Re-weighting Date”	has the meaning given to such term in Section 2 (<i>General Notes on the ETF Efficiente Indices</i>).
“Re-weighting Selection Date”	has the meaning given to such term in Section 2 (<i>General Notes on the ETF Efficiente Indices</i>).
“Realized Volatility”	means, in respect of an Eligible Portfolio and a Performance Observation Period, the annualized realized volatility of such Eligible Portfolio over such Performance Observation Period, as determined by the Index Calculation Agent pursuant to Section 6.2 (<i>Identifying the Unique Portfolio for each Performance Observation Period</i>).

“Reference Commodity”	means with respect to an ETF Constituent, each commodity underlying such ETF Constituent.
“Reference Index”	means with respect to an ETF Constituent, the index underlying such ETF Constituent.
“Related Exchange”	means, in respect of any ETF Constituent, each exchange or quotation system, if any, specified as such in Table 1 (above in Section 4 (<i>The Basket Constituents</i>)), any successor to such exchange or quotation system or any substitute exchange or quotation system to which trading in futures or options contracts relating to the ETF Constituent has temporarily relocated (provided that the Index Calculation Agent has determined that there is comparable liquidity relative to the futures or options contracts relating to the ETF Constituent on such temporary substitute exchange or quotation system as on the original Related Exchange), provided, however, that where “All Exchanges” is specified as the Related Exchange, “Related Exchange” shall mean each exchange or quotation system (as determined by the Index Calculation Agent) where trading has a material effect (as determined by the Index Calculation Agent) on the overall market for futures or options contracts relating to the Share.
“Rules”	means the rules of the JPMorgan ETF Efficiente Index Series as set out in this document, as the same may be supplemented, amended or restated from time to time.
“Start Date”	for each ETF Efficiente Index, has the meaning given to such term in the applicable module in Part B.
“Target Volatility”	has the meaning given to such term in Section 2 (<i>General Notes on the ETF Efficiente Indices</i>) and is specified in the applicable module in Part B, subject to adjustment in accordance with Section 6.2(f).
“Unique Portfolio”	has the meaning give to such term in Section 6.2 (<i>Identifying the Unique Portfolio for Each Performance Observation Period</i>).
“Weekday”	means any day other than a Saturday or a Sunday.
“Weight”	means, in respect of a Basket Constituent and a Re-weighting Date, the weight assigned to that Basket Constituent within an ETF Efficiente Index as of the relevant Re-weighting Date, as determined by the Index Calculation Agent on the Re-weighting Selection Date immediately preceding that Re-weighting Date in accordance with Section 6 (<i>Determining the Weights for the Basket Constituents</i>)
“Weighting Constraints”	has the meaning given to such term in Section 6.4 (<i>Eligible Portfolios & Weighting Constraints</i>) and are detailed in the applicable module in Part B.

Schedule 1:

The indices comprising the JPMorgan ETF Efficiente Index Series:

Table A below of this Schedule 1 sets out the name of each index in the JPMorgan ETF Efficiente Index Series. The relevant parameters for each ETF Efficiente Index are provided in the applicable module in Part B.

Name
JPMorgan ETF Efficiente 5 Index
JPMorgan ETF Efficiente 8 Index

This table may be amended from time to time to add additional ETF Efficiente Indices.

Schedule 2:

Appendix: Average Daily Trading Volume and Market Capitalization as of October 28, 2010

Table A.

	ETF Constituent Name	Bloomberg Ticker	Average Daily Trading Volume on the Start Date (\$MM*)	Market Capitalization on the Start Date (\$MM*)
1	SPDR S&P 500 ETF Trust	SPY	28,289	81,516
2	iShares Russell 2000 Index Fund	IWM	5,040	12,716
3	iShares MSCI EAFE Index Fund	EFA	1,428	36,203
4	iShares Barclays 20+ Year Treasury Bond Fund	TLT	763	3,194
5	iShares iBOXX Investment Grade Corporate Bond Fund	LQD	112	14,511
6	iShares iBOXX High Yield Corporate Bond Fund	HYG	101	7,174
7	iShares MSCI Emerging Markets Index Fund	EEM	3,417	47,972
8	iShares JPMorgan USD Emerging Markets Bond Fund	EMB	26	2,366
9	iShares Dow Jones Real Estate Index Fund	IYR	834	3,051
10	iShares S&P GSCI Commodity-Indexed Trust	GSG	13	1,582
11	SPDR Gold Trust	GLD	2,027	55,843
12	iShares Barclays US Treasury Inflation Protected Securities Fund	TIP	90	20,704

* Numbers have been rounded to the nearest \$1 MM

Part B

PARAMETERS FOR EACH OF THE JPMORGAN ETF EFFICIENTE INDICES

MODULE B1: JPMORGAN ETF EFFICIENTE 5 INDEX

Name	JPMorgan ETF Efficiente 5 Index
Start Date	October 29, 2010
Index Level on the Start Date	100.53
Target Volatility	5.00%
Fee	0.50% per annum
Weighting Constraints	<p>(i) The minimum possible Weight assigned to any Basket Constituent is zero percent (0%);</p> <p>(ii) The Weight assigned to each Basket Constituent is an integral multiple of five percent (5%);</p> <p>(iii) The maximum possible Weight assigned to (x) either of the JPMorgan Cash Index USD 3 Month or the iShares Barclays US Treasury Inflation Protected Securities Fund is fifty percent (50%), (y) the iShares Russell 2000 Index Fund or the iShares S&P GSCI Commodity-Indexed Trust or the SPDR Gold Trust is ten percent (10%), and (z) any other Basket Constituent is twenty percent (20%);</p> <p>(iv) The sum of the Weights assigned to the Basket Constituents numbered 1 through 3 in Table 1 (in Section 4 (<i>The Basket Constituents</i>) of Part A) shall not be greater than fifty per cent (50%). For the avoidance of doubt, the sum of the Weights assigned to the SPDR S&P 500 ETF Trust, iShares Russell 2000 Index Fund and iShares MSCI EAFE Index Fund shall not be greater than fifty per cent (50%);</p> <p>(v) The sum of the Weights assigned to the Basket Constituents numbered 4 through 6 in Table 1 (in Section 4 (<i>The Basket Constituents</i>) of Part A) shall not be greater than fifty per cent (50%) For the avoidance of doubt, the sum of the Weights assigned to the iShares Barclays 20+ Year Treasury Bond Fund, the iShares iBOXX Investment Grade Corporate Bond Fund, and the iShares iBoxx High Yield Corporate Bond Fund shall not be greater than fifty per cent (50%);</p> <p>(vi) The sum of the Weights assigned to the Basket Constituents numbered 7 and 8 in Table 1 (in Section 4 (<i>The Basket Constituents</i>) of Part A) shall not be greater than twenty-five per cent (25%) For the avoidance of doubt, the sum of the Weights assigned to the iShares MSCI Emerging Markets Index Fund and the iShares Emerging Markets Bond Fund shall not be greater than twenty-five per cent (25%);</p> <p>(vii) The sum of the Weights assigned to the Basket Constituents numbered 9 through 11 in Table 1 (in Section 4 (<i>The Basket Constituents</i>) of Part A) shall not be greater than twenty-five per cent (25%). For the avoidance of doubt, the sum of the Weights assigned to the iShares Dow Jones Real Estate Index Fund, the iShares S&P GSCI Commodity-Indexed Trust and the SPDR Gold Trust shall not be greater than twenty-five per cent (25%);</p> <p>(viii) The sum of the Weights assigned to the Basket Constituents numbered 12 and 13 in Table 1 (in Section 4 (<i>The Basket Constituents</i>) of Part A) shall not be greater than fifty per cent (50%). For the avoidance of doubt, the sum of the Weights assigned to the iShares Barclays US Treasury Inflation Protected Securities Fund and the JPMorgan Cash Index USD 3 Month shall not be greater than fifty per cent (50%); and</p> <p>(ix) The sum of (i) the Weights assigned to all the Basket Constituents shall be equal to one hundred per cent (100%).</p> <p>Consequently, as long as Weighting Constraints (iv) through (ix) above are satisfied, (a) the Weight assigned to each Basket Constituent numbered 1, 3, 4, 5, 6, 7, 8 or 9 in Table 1 (in Section 4 (<i>The Basket Constituents</i>) of Part A) in an Eligible Portfolio may be any of 0%, 5%, 10%, 15%, or 20%; (b)</p>

	the Weight assigned to each Basket Constituent numbered 2, 10 or 11 in Table 1 (in Section 4 (<i>The Basket Constituents</i>) of Part A) may be any of 0%, 5%, or 10%; and (c) the Weight assigned to the either of the Basket Constituents numbered 12 or 13 in Table 1 (in Section 4 (<i>The Basket Constituents</i>) of Part A) may be any of 0%, 5%, 10%, 15%, 20%, 25%, 30%, 35%, 40%, 45% or 50%.
--	---

MODULE B2: JPMORGAN ETF EFFICIENTE 8 INDEX

Name	JPMorgan ETF Efficiente 8 Index
Start Date	December 23, 2010
Index Level on the Start Date	99.66
Target Volatility	8.00%
Fee	0.50% per annum
Weighting Constraints	<p>(i) The minimum possible Weight assigned to any Basket Constituent is zero percent (0%);</p> <p>(ii) The Weight assigned to each Basket Constituent is an integral multiple of five percent (5%);</p> <p>(iii) The maximum possible Weight assigned to (x) either of the JPMorgan Cash Index USD 3 Month or the iShares Barclays US Treasury Inflation Protected Securities Fund is fifty percent (50%), and (y) any other Basket Constituent is twenty percent (20%);</p> <p>(iv) The sum of the Weights assigned to the Basket Constituents numbered 1 through 3 in Table 1 (in Section 4 (<i>The Basket Constituents</i>) of Part A) shall not be greater than fifty per cent (50%). For the avoidance of doubt, the sum of the Weights assigned to the SPDR S&P 500 ETF Trust, iShares Russell 2000 Index Fund and iShares MSCI EAFE Index Fund shall not be greater than fifty per cent (50%);</p> <p>(v) The sum of the Weights assigned to the Basket Constituents numbered 4 through 6 in Table 1 (in Section 4 (<i>The Basket Constituents</i>) of Part A) shall not be greater than fifty per cent (50%) For the avoidance of doubt, the sum of the Weights assigned to the iShares Barclays 20+ Year Treasury Bond Fund, the iShares iBOXX Investment Grade Corporate Bond Fund, and the iShares iBoxx High Yield Corporate Bond Fund shall not be greater than fifty per cent (50%);</p> <p>(vi) The sum of the Weights assigned to the Basket Constituents numbered 7 and 8 in Table 1 (in Section 4 (<i>The Basket Constituents</i>) of Part A) shall not be greater than forty per cent (40%) For the avoidance of doubt, the sum of the Weights assigned to the iShares MSCI Emerging Markets Index Fund and the iShares Emerging Markets Bond Fund shall not be greater than forty per cent (40%);</p> <p>(vii) The sum of the Weights assigned to the Basket Constituents numbered 9 through 11 in Table 1 (in Section 4 (<i>The Basket Constituents</i>) of Part A) shall not be greater than fifty per cent (50%). For the avoidance of doubt, the sum of the Weights assigned to the iShares Dow Jones Real Estate Index Fund, the iShares S&P GSCI Commodity-Indexed Trust and the SPDR Gold Trust shall not be greater than fifty per cent (50%);</p> <p>(viii) The sum of the Weights assigned to the Basket Constituents numbered 12 and 13 in Table 1 (in Section 4 (<i>The Basket Constituents</i>) of Part A) shall not be greater than fifty per cent (50%). For the avoidance of doubt, the sum of the Weights assigned to the iShares Barclays US Treasury Inflation Protected Securities Fund and the JPMorgan Cash Index USD 3 Month shall not be greater than fifty per cent (50%); and</p> <p>(ix) The sum of (i) the Weights assigned to all the Basket Constituents shall be equal to one hundred per cent (100%).</p> <p>Consequently, as long as Weighting Constraints (iv) through (ix) above are satisfied, (a) the Weight assigned to each Basket Constituent numbered 1, 2, 3, 4, 5, 6, 7, 8, 9, 10 or 11 in Table 1 (in Section 4 (<i>The Basket Constituents</i>) of Part A) in an Eligible Portfolio may be any of 0%, 5%, 10%, 15%, or 20%; and (b) the Weight assigned to either of the Basket Constituents numbered 12 or 13 in Table 1 (in Section 4 (<i>The Basket Constituents</i>) of Part A) may be any of 0%, 5%, 10%, 15%, 20%, 25%, 30%, 35%, 40%, 45% or 50%.</p>

Risk Factors

The following list of risk factors does not purport to be a complete enumeration or explanation of all the risks associated with an ETF Efficiente Index.

(a) Proprietary and Rules-Based Trading Index

An ETF Efficiente Index follows a notional rules-based proprietary trading strategy that operates on the basis of pre-determined rules. Accordingly, potential investors in financial products which are linked to the performance of an ETF Efficiente Index should determine whether those rules as described in the Rules of that ETF Efficiente Index are appropriate in light of their individual circumstances and investment objectives.

No assurance can be given that the investment strategy on which an ETF Efficiente Index is based will be successful or that such ETF Efficiente Index will outperform any alternative strategy that might be employed in respect of the Basket Constituents.

(b) Notional Exposures

An ETF Efficiente Index comprises notional assets and liabilities. The exposures to the Basket Constituents are purely notional and will exist solely in the records maintained by or on behalf of the Index Calculation Agent. Consequently, investors in financial products which are linked to the performance of an ETF Efficiente Index will not have any claim against any of the reference assets which comprise that ETF Efficiente Index. The strategy tracks the excess returns of a notional dynamic basket of assets over a cash investment and as such any allocation to the JPMorgan Cash Index will result in this portion of the portfolio not being invested.

(c) Lack of Operating History

Each ETF Efficiente Index is only recently established and therefore has no history to evaluate its likely performance. Any back-testing or similar analysis performed by any person in respect of any ETF Efficiente Index must be considered illustrative only and may be based on estimates or assumptions not used by the Index Calculation Agent when determining the Index Level of that ETF Efficiente Index.

Past performance should not be considered indicative of future performance.

(d) Market Risks

The performance of an ETF Efficiente Index is dependent on the performance of the 13 Basket Constituents (being the 12 ETF Constituents and the Cash Constituent). As a consequence, investors in financial products the return on which is linked to an ETF Efficiente Index should appreciate that their investment is exposed to the performance of the Basket Constituents.

(e) Momentum Investment Strategy

Each ETF Efficiente Index is constructed using what is generally known as a momentum investment strategy. Momentum investing generally seeks to capitalize on positive trends in the price of assets. Even when the Closing Levels of the Basket Constituents are trending downwards, the ETF Efficiente Index will continue to be comprised of the 13 Basket Constituents (being the 12 ETF Constituents and the Cash Constituent). Due to the "long-only" construction of each ETF Efficiente Index in respect of all

Basket Constituents, the Weight of each such Basket Constituent will not fall below zero in respect of each Re-weighting Date even if the relevant Basket Constituent displayed a negative performance over the relevant Performance Observation Periods.

Furthermore, the results that may be obtained from investing in any security or other investment or transaction linked to an ETF Efficiente Index may be significantly different from the results that could theoretically be obtained from investing in the Basket Constituents. Such differences may arise for a number of reasons including, but not limited to, the fees deducted from the Index Level.

(f) Extraordinary Events

Following the occurrence of certain extraordinary events as described in Section 10 of the Rules, with respect to a Basket Constituent, the affected Basket Constituent may be replaced by a substitute Basket Constituent.

(g) Index Calculation Agent Discretion

The Rules of each ETF Efficiente Index confer on the Index Calculation Agent discretion in making certain determinations and calculations from time to time. The exercise of such discretion in the making of calculations and determinations may adversely affect the performance of an ETF Efficiente Index. Without limitation to the generality of the foregoing, the Index Calculation Agent has discretion in relation to the calculation of the Index Level in the event of a Market Disruption Event.

(h) Potential Conflicts of Interest

Potential conflicts of interest may exist in the structure and operation of each ETF Efficiente Index and in the course of the normal business activities of JPMorgan or any of its affiliates or subsidiaries or their respective directors, officers, employees, representatives, delegates or agents. Further information is set out in the disclaimer below.

The foregoing list of risk factors is not intended to be exhaustive. All persons should seek such advice as they consider necessary from their professional advisors, legal, tax or otherwise, without reliance on the Index Calculation Agent or any of its affiliates or subsidiaries or any of their respective directors, officers, employees, representatives, delegates or agents.

Notices, Disclaimers and Conflicts of Interest

These Rules have been prepared solely for informational purposes and nothing in these Rules constitutes an offer to buy or sell any securities, participate in any transaction or adopt any investment linked to an ETF Efficient Index or as legal, tax, regulatory, financial or accounting advice. These Rules may change at any time without prior notice.

Neither the Index Calculation Agent nor any of its affiliates or subsidiaries or their respective directors, officers, employees, representatives, delegates or agents (each a “**Relevant Person**”) make any representation or warranty, whatsoever, express or implied, as to the results that may be obtained through the use of this document or any ETF Efficient Index. Each Relevant Person hereby expressly disclaims, to the fullest extent permitted by law, all warranties of accuracy, completeness, merchantability, or fitness for a particular purpose with respect to any information contained in this document and no Relevant Person shall have any liability (direct or indirect, special, punitive, consequential or otherwise) to any person even if notified of the possibility of any such damages.

The Index Calculation Agent is under no obligation to continue the calculation, publication and dissemination of any ETF Efficient Index or the Index Level.

During the course of their normal business, the Index Calculation Agent or any of the other Relevant Persons may (i) enter into or promote, offer or sell transactions or investments (structured or otherwise) linked to any ETF Efficient Index and/or any of the Basket Constituents and/or (ii) act as an investment manager, investment advisor, administrator, custodian, prime broker or other service provider to any of the Basket Constituents. In addition, any Relevant Person may have, or may have had, interests or positions, or may buy, sell or otherwise trade positions in or relating to any ETF Efficient Index or any of the Basket Constituents, or may invest or engage in transactions with other persons, or on behalf of such persons relating to any of these items. Such activity may or may not have an impact on the Index Level but all persons reading this document should be aware that a conflict of interest could arise where anyone is acting in more than one capacity, and such conflict may have an impact, positive or negative on the Index Level. Neither the Index Calculation Agent nor any other Relevant Person has any duty to consider the circumstances of any person when participating in such transactions or to conduct themselves in a manner that is favorable to anyone with exposure to any ETF Efficient Index.

The Rules have been developed with the possibility of the Index Calculation Agent or any of the other Relevant Persons entering into or promoting, offering or selling transactions or investments (structured or otherwise) linked to any ETF Efficient Index and hedging such transactions or investments in any manner that they see fit. Accordingly it should be assumed that these Rules have and will be analyzed from this point of view.

As mentioned above, each ETF Efficient Index is described as a notional basket because there is no actual portfolio of assets to which any person is entitled or in which any person has any ownership interest. Each ETF Efficient Index merely identifies certain reference assets, the performance of which will be used as a reference point for calculating the Index Level.

No one may reproduce or disseminate the information contained in this document or the Index Level of any ETF Efficient Index without the prior written consent of the Index Calculation Agent. This document is not intended for distribution to, or use by any person in, a jurisdiction where such distribution is prohibited by law or regulation.

The Rules shall be governed by and construed in accordance with the laws of New York.

Index Disclaimers

JPMorgan Indices

The JPMorgan Cash Index USD 3 Month (the “**JPM Cash Index**”) is a widely used benchmark in the international capital markets and is determined, composed and calculated by J.P. Morgan Securities LLC (“**JPMS**”) without regard to the ETF Efficient Index.

JPMS has no obligation to take into account the interests of prospective investors in instruments linked to the ETF Efficient Index when determining, composing or calculating the JPM Cash Index and can at any time and in its sole discretion, modify or change the method of calculating such index or cease its calculation, publication or dissemination. Accordingly, actions and omissions of JPMS may affect the value of the JPM Cash Index and, consequently, the value of any instruments linked to the ETF Efficient Index.

JPMS does not make any warranty or representation whatsoever, express or implied as to the results to be obtained from the use of the JPM Cash Index, or as to the performance and/or the value thereof at any time (past, present or future).

Neither JPMS nor the Index Calculation Agent (whether as a result of negligence or for any other reason) shall be liable to any investor in instruments linked to the ETF Efficient Index for any error or omission in the calculation of the JPM Cash Index or be under any obligation to advise any person of any error therein or to guarantee the performance and/or value of the JPM Cash Index.

Furthermore, JPMS does not make any representation or warranty, either express or implied, regarding any instruments linked to the ETF Efficient Index, its performance (present or future) or suitability as an investment or any information supplied to any prospective investor in connection with it. JPMS shall not have any obligation or liability to any prospective investor (whether as a result of negligence or for any other reason) in connection with any instruments linked to the ETF Efficient Index, including without limitation the administration, marketing or trading thereof.

Investors in any instruments linked to the ETF Efficient Index should also be aware that any entity within the JPMorgan Chase & Co. group (JPMorgan) is or may be, in respect of the securities comprised in the JPM Cash Index, engaged in securities trading, securities brokerage and financing activities, as well as providing investment banking and financial advisory services. Accordingly, JPMorgan may at any time hold long or short positions, and may trade or otherwise effect transactions, for its own account or the accounts of its customers.
